The
All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

THE UNITED
GAS IMPROVEMENT CO.

2 stories, 80x80 feet, slag roof, steam heating, electric lighting, yellow pine and concrete floors. Contract awarded to R. C. Dean, Church street, Scranton, Pa.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

VOLUME XXXII

Engineering and the Building Trades

PHILADELPHIA

Number 18

May 2, 1917

As The Editor Sees It

THE Philadelphia Master Builders' Exchange was thirty years "young" on Thursday. We say thirty years "young" because among the signs of age are to be noted such conditions as feebleness, decrepitude and physical degeneration and the Master Builders' Exchange, far from showing any of these impairments as a result of the three decades through which it has passed, is just as spry; as active and as vigorous as it was twenty years back.

* * *

THE Master Builders' Exchange is one of Philadelphia's institutions. It is one of the organizations that lend this fine, old Quaker city its unique distinction among municipalities. It stands for the things that give Philadelphia its commanding position as a center of healthy and wholesome civic aspirations. It symbolizes solidity, conservatism, vision and the spirit of co-ordinated effort. It is the largest organization of its kind, in point of membership, in the United States.

It is the wealthiest organization of its kind in the United States.

It was the first organization of builders to establish, as a feature of its activities, a permanent building exhibit.

It owns its own building and is free of debt.

It is a recognized leader in every movement, trade or lay, inspired by the needs of the craft or the growth and welfare of Philadelphia.

* * *

IT was on June 7, 1886, that the idea of the Philadelphia Master Builders' Exchange was first projected. The suggestion was a happy thought of Charles H. Reeves, who outlined his plans at a meeting of the Master Plasterers' Company, of which he was a member.

"For 100 years," said Mr. Reeves, trade organizations have prospered in Philadelphia. It was one of these,—the Carpenters' Company,—that gave shelter to the first Continental Congress on September 4, 1774, and it is proper, if not absolutely necessary, that the members of that company, this company, and every similar organization unite under one common banner for the benefit of the building trade." President Allen, of the Plasterers' Company, Wm. H. Albertson and Mr. Reeves, were appointed a committee to act on the suggestion. It was on September 6 that the first meeting took place at 1321 Arch street. David A. Woelpper presided and named Stacy Reeves, George W. Roydhouse and Frederick H. Mylhertz to draft a resolution expressive of the object of the proposed organization.

This committee reported the following resolution:

"That we, the committee appointed by our several organizations, agree to recommend to our different associations the necessity of forming an organization embracing all the branches of the building trade, master mechanics and material men for our mutual benefit and protection, such organization to be known as the Master Builders' Exchange of the city and county of Philadelphia."

It was on December 28 that the first Board of Directors was chosen; made up of Miles King, Charles H. Reeves, David A. Woelpper, Peter Carrigan, Wm. Harkness, Jr., Wm. Rice, Jr., Hugh Copeland, Stacy Reeves, George Watson, Geo. Roydhouse, Wm. H. Albertson, J. Steinhorn, Alfred P. Shannon, Fred. H. Mylhertz, John Byrd, Daniel J. Creswell, Joseph Chapman, Jno. F. Huneker, Jno. E. Evanson and Murrell Dobbins. Mr. Nice declined to serve, necessitating the election of Charles Gillingham in his stead.

At the very first meeting of the Board of Directors, John H. Stevens was chosen President of the Exchange. On February 2, 1887, the Exchange was granted its charter.

It was not, however, until April 7, 1887, that the Exchange, then located at Third and Walnut streets, had its first formal opening. Four hundred master builders and material men were in attendance at this now historic function.

* * *

IT was at this meeting that the decision was reached to purchase the building, since known as the home of the Exchange.

The building was the property originally of the German Society of Pennsylvania which erected it in 1807, General Peter Muhlenberg, at that time president of the society, taking part in the dedicatory ceremonies. After being used in turn as a German school, a college of pharmacy, and as the offices of the Schuylkill Navigation Company, the building passed, in 1849, by lease, into the hands of the old Gas Trust. Until 1866, the old building stood intact. In that year it was partly torn down and replaced by the present structure.

* * *

DURING the thirty years of its corporate existence the Exchange has been a power for good in promoting the advancement of the building trades.

Its activities have covered every phase from the stimulation of better and more cordial relations as between the various branches of the craft itself, as between the craft and the architect, as between the craft and the public and as between the Exchange as a unit and trade bodies of similar aim throughout the country.

It has been an inspiration to higher ideals, an influence for fixed ethical standards and an agency for the dis-

semination of statistical and other data important to the trade.

* * *

A MERE enumeration of the things it has done to better the status of the building trade, within the past thirty years, would consume more space than we can afford to give to this hastily penned little resume of its long and honorable career.

Its exhibit of building materials and appliances is one of the most complete ever assembled in a permanent display of the kind.

Its weekly luncheon, at which is to be met about everybody who can claim to be anybody in the building and material world, is one of its unique and delightful features.

Its quickly accessible and voluminous compilation of data and other information covering every branch of the building trades is an achievement in itself

of far-reaching and noteworthy importance.

May we close these few editorial generalizations with "many happy returns?"

* * *

A NY mention of the Exchange would be incomplete without a word regarding its present wide-awake, hustling and progressive Board of officers: President, Jacob L. Tyson; Vice-residents, O. W. Ketcham, Edwin E. Hollenback and W. Nelson Mayhew; Secretary, Charles Elmer Smith; Treasurer, P. D. Smith; Directors, J. Turley Allen, F. F. Black, Harry Boon, A. G. Buvinger, C. E. Drehmann, Edgar J. Ellis, Chas. H. Fowler, F. M. Harris, Jr., Edward F. Henson, Wm. W. Hodgson, Edwin E. Hollenback, O. W. Ketcham, C. I. Leiper, Albert McChesney, W. Nelson Mayhew, Edw. F. Morse, C. F. Shellenberger, Harold Smith, Jos. M. Steele, Jacob L. Tyson and Geo. J. Watson.

other projects of a similar nature. Commitments for Federal construction loom large in the orders for the week. The American Bridge Company and the McClintic-Marshall Company each obtaining important contracts for the erection of cranes at the League Island Navy Yard at Philadelphia and the Norfolk Navy Yard, respectively. The week was a light one as far as bookings for steel for purely local consumption was concerned, although the inquiries current indicate that there is an immense amount of work in prospect and a fair amount now figuring. There has been no important price revision this week, although the trade fully expects that the prices of structural shapes will be further advanced.

* * *

Bath Portland Cement Co. has moved its offices from 1182 Broadway to 8 West Fortieth street.

* * *

From the records of the Bridge Builders Structural Society, as collected by its secretary, it is shown that during March, 1917, 68 per cent. of the entire capacity of the bridge and structural shops of the country was contracted for. The present outlook for the steel industry is that the coming months will be registered among the busiest in the annals of the business. It seems now as though Government requirements totalling a million tons or more would be placed before May 1.

* * *

A recent statement of the United States Steel Corporation showed that the unfilled tonnage orders on the books March 31, established a new high record for the concern. The figures for March surpassed the previous high mark for February, 1917, by 134,947 tons, and showed an increase of 2,380,643 tons over the corresponding period of 1916. The gain of 134,947 tons of unfilled orders for fabricated steel in March is to be regarded as a highly favorable condition when the fact is taken into consideration that the shipments were much heavier in March than in either January or February, and the further fact that the books have been congested with orders for months and thousands of tons of prospective business has recently been turned away.

* * *

Owing to the international complications and the consequent state of internal affairs that are likely to follow, the spring meeting of the Portland Cement Association, which was to be held in San Francisco, April 16 to 18, inclusive, was postponed indefinitely.

* * *

Rolland C. Buckley, of Minneapolis, and **E. Paul Prins**, formerly of Chicago, announce the forming of a copartnership for the practice of architecture, with offices in the Plymouth Building, Minneapolis.

* * *

Plans have been prepared, it is reported, for a 57-story building, capable of housing 10,000 people in hotel rooms and offices. Plans call for a 27-story hotel and 57 stories of offices, running up into a tower, 808 feet high, as compared with 789 feet at the Woolworth

EDITORIAL NOTES

Frederick Leopold Hill, a young architect of fine promise, late of the firm of Hill & Walls, Real Estate Trust Building, died suddenly on Saturday, April 21. Mr. Hill, who was widely known and esteemed, was an instructor for some time at Drexel Institute.

* * *

E. J. Berlet, President of the Walnut Street Business Men's Association, has launched a campaign having for its object the persuading of the Master Builders' Exchange to build its new home and exhibit building in the Walnut street section. The Berlet plans contemplate a modern office building to house architects, material men, builders and others having relations with the Exchange on the upper floors and with ample accommodations on the lower floors for every activity of the Exchange and its officials.

* * *

The Otis Elevator Company is now occupying new and commodious quarters in the Otis Building, at Sixteenth and Sansom streets, which, by the way, bids fair to become the centre par excellence for the architectural and building activities of Philadelphia. Many of the city's leading architects and builders have taken up their offices in the new Otis Building, together with a considerable delegation of prominent material and equipment concerns. The Otis Elevator Company has issued an attractive booklet showing half-tone cuts of its new offices. Vice-President Godfrey R. Rebbman, of the Otis Company, is a live-wire executive and is bagging a record business for the Otis concern.

* * *

It costs \$980 a year for a family of five to live in New York City, as compared with

\$840 in 1915, according to a report of the Bureau of Personal Service of the Board of Estimate. In the expenditure allotment \$16 a month is devoted for the rent of a four-room apartment. The Bureau finds that the cost of actual necessities of life is to-day 16 per cent. more than that of two years ago.

* * *

The war tax on steel may total \$65,000,000 in 1917, according to the estimate of Elbert H. Gary, chairman of the United States Steel Corporation, who derived these figures through the application of present laws, without reference to the possible new tax levies. "The burden which will be imposed by the Government on corporations and individuals," declared Judge Gary, "will undoubtedly be very large. No loyal citizen can object to these taxes, if they are equitably distributed." This, namely, equitable distribution of the new taxes, will be one of the principal problems to be met as the war progresses. American business genius and her ability to overcome apparently insurmountable obstacles encourages the belief, however, that the concentration of the best American thought on this subject will eventually be rewarded by a satisfactory solution.—Exchange.

* * *

Alfred Peter, architect, 238 Washington street, Newark, N. J., will move his office on May 1 to 828 Broad street, Newark.

* * *

The demand for structural steel for the construction of manufacturing plants is still extremely heavy, with the majority of inquiries from this source coming for the erection of new additions to shipyards, piers and pier sheds, transmission towers, power houses, and

Building, New York. Two aeroplane landings 50 feet wide by 620 feet long, will be located on the roof, according to the architect.

C. V. Merrick, architect, formerly of 51 State street, Albany, has moved to 25 Washington avenue, Albany.

Sarco Co., Inc., manufacturer of the Sarco line of steam traps and temperature regulators, has added Buffalo, N. Y., to its list of branch offices. The new office is located at 325 Elliott Square and is under the management of F. D. Harger, M. E.

The Royal Institute of British Architects will this year present the Royal Gold Medal to Monsieur Henri Paul Nenot, member of the Institute of France, Honorary Corresponding Member of the Royal Institute of British Architects, Honorary Corresponding Member of the American Institute of Architects, and Inspector General of Public Buildings and National Palaces in France. M. Nenot was awarded the Prix de Rome in 1877, and is perhaps best known as the designer of the buildings for the University of Paris, the new Sorbonne. The announcement of the nomination was made at the special meeting of the R. I. B. A. in March, and the medal will be presented in June. The award has an especial significance at this moment, inasmuch as M. Nenot fought against Germany in the war of 1870.

The Department of the Art Jury of the city of Philadelphia is inviting the members of the Federal Commission of Fine Arts and of the State and Municipal Departments of Art of the United States, to a conference to be held in Philadelphia on May 15. This will be the second conference of such bodies, the first having been held three or four years ago on the invitation of the New York Art Commission. The morning session will be held in Mayor Smith's reception room, City Hall. Those attending the conference will then be taken in motors to Lynnewood Hall, the residence of Mr. Joseph E. Widener, president of the Art Jury, who will entertain them at luncheon. The afternoon session will also be held in Lynnewood Hall. Those attending the conference will be guests at dinner at the Ritz-Carlton. The first municipal departments of this kind were appointed in New York and Boston in 1898. In addition to the National Commission of Fine Arts there are now five State Art Commissions and about twenty-five municipal ones.

The union shop and a 44-hour week has been agreed to by the Cramp Company, builders, who have signed an agreement with the Cement, Asphalt and Composition Floor Layers' Union. The new rate is 55 cents an hour, time and one-half for overtime, double time for Saturday afternoons, Sundays and legal holidays.

The National Machine Tool Builders' Association will hold its spring meeting at the Hotel Sinton, Cincinnati, Ohio, May 21-22.

The Executive Committee of the Board of Directors of the American Institute of Architects has accepted an invitation from the Georgia Chapter to hold its May meeting in Atlanta. To derive the fullest benefits for architects throughout the Southern States in this section of the country, and in order that the members of the profession generally in the South may become better acquainted with the officers of the Institute, the Georgia Chapter most cordially invites them to meet with it in Atlanta on Friday evening, May 18, and on Saturday, May 19.

On Friday evening, May 18, there will be an informal dinner for the Chapter and its guests at a cost of \$2, and on Saturday morning the entire party will be shown in and about Atlanta. Details concerning the exact time and place of the dinner will be announced later. Intention to attend should be communicated to Mr. William J. J. Chase, secretary, Georgia Chapter, 1033 Candler Building, Atlanta, Ga. If so requested, Mr. Chase will make reservations at the Georgian Terrace Hotel, which is to be the headquarters for the meeting.

Mr. Thomas C. Young, of Eames & Young, St. Louis, and Mr. Alfred H. Granger, formerly of Frost & Granger, Chicago, will be associated for the practice of architecture after April 1, as Eames & Young, Wright Building, St. Louis, and Granger & Young, 332 South Michigan avenue, Chicago.

The American Society for Testing Materials will hold its twentieth annual meeting at Atlantic City, at the Hotel Traymore, June 26 to 30, inclusive.

Mr. W. Carby Zimmerman, Chicago, announces the new firm of Zimmerman, Saxe & Zimmerman, with offices at 64 Van Buren street. The new partners are Mr. R. W. Zimmerman and Mr. Herbert Moore Saxe.

The New Jersey State Association of Master Plumbers will hold its annual convention at Elks Hall, Jersey City, N. J., May 15-17.

Probably the finest auxiliary signal corps in the country is being quietly and unostentatiously supplied to the Government by the American Telephone and Telegraph Company. The company has consented to pay the difference between the Government stipend and the present salaries of five hundred trained engineers, so that the men will be afforded an opportunity of assisting in highly specialized field work for the Government without suffering any financial loss. This is but one of the many individual contributions of public-spirited corporations that exemplify and glorify American patriotism.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

The business man who grudges a commission to an advertising agent who thinks "he can do it himself" is usually about as intelligent as he would be if he grudging the commission of the architect and decided to build his store for himself.

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

THE ANNUAL REPORT OF THE AMERICAN ACADEMY IN ROME.

The report of the Executive Committee of the Academy reviews the question of finances and sets forth the need for further endowment of the Academy. It is pleasant to note that Mr. Morgan has generously offered to cancel the Academy's debt to him, by an amount equal to any sum which shall be paid in for endowment, and to learn of the Fellowship in Architecture endowed by Mr. William R. Mead, and the Fellowship, of which the character is left to the determination of the Academy, made possible through the contribution of Mr. A. W. Mellon. In closing its report, the Executive Committee says:

"It will not be amiss to indicate ways in which Academy influence may be strengthened and brought into closer contact with American educational life. The American Institute of Architects has already manifested officially its growing appreciation of our potentiality; were its Committee on Education charged with the duty of reviewing our work and reporting thereon to the Institute, this appreciation would doubtless grow even faster. The Association of Collegiate Architectural Schools is concerning itself very seriously with educational standards and methods, in which it co-operated with the Institute; since it is from these schools that we must draw our Fellows, here is a movement closely affecting us. In those schools, not only practitioners but teachers of the art of architecture must be developed. It is conceivable that in conference with the Association representing them, plans might be worked out for including one somewhat like that between the Contributing Colleges and the School of Classical Studies, of much benefit to the Schools of Architecture, to the Academy, and hence ultimately to American Art."

These suggestion would seem to disclose large opportunities, and they will doubtless receive careful consideration.

In the report of Mr. Stevens, Director of the School of Fine Arts, it is interesting to note that the campaign of the Institute toward a common-sense public building policy for the United States found an echo in the work which the School did in making a report upon the public building policy of the Italian Government. Also, we may all share Mr. Stevens' hope that the close of the war will make it possible to undertake the excavation of an ancient site, thus broadening the interest and influence of the Academy.

The report of the Director, Dr. Carter, gives one an intimate picture of the Academy in war-time, and of Rome devoid of tourists—"the City come into its own again, the 'contadini' as visitors 'seeing Rome first,' peasants from the Abruzzi and Sardinian fishermen in full costume on the Corso, the Pantheon admired by the people of Calabria, the Forum visited by peasants from Scanno." The Villa Mirafiore is now a training school

with workshops for the soldiers who have lost arms or legs. Student travel and taking of measurements and photographs have become almost-impossible under war conditions, and yet the Academy has continued its work, with even two more students than in the previous year.

"We thus step forward," says the report, "into the new year, with our budget still further cut, grimly determined to make it go, but we have a steadily growing conviction that we have reached the limit of our economies. So long as the war lasts and our work cannot be seen face to face, it may be difficult to cause others to share this conviction; and yet, somehow, we feel that things are about to change, and that our great and prosperous country will soon take a proper pride in what we are doing and what we stand for, and that we shall soon be able to carry out the dreams of our founders, occupying all of our properties to the universal service of Art and Letters and the glory of our country in a foreign land."

Of all the agencies which are silently at work tearing down the barriers of race and country between men, surely none is more worthy of generous support than the American Academy in Rome, for it works in a language which is universal and over the manifestations and interpretations of which men are forever at peace.—"Journal of Institute."

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

One secret that has been fairly well kept is the secret of success. Strange, too, when so many people are anxious to tell about it.

Read "The Guide." Read it all through. Don't let a single item escape your notice. You'll be surprised what a lot of valuable information is crowded into its pages in the course of a year.

Lots of men don't advertise because they cherish an idea it's too expensive. As a matter of fact, it's the cheapest good investment a man can put his money in, as hundreds of successful men have learned.

Are you a regular subscriber to "The Guide"?

Many a man has a "Do It Now" motto over his desk and cobwebs on his brain and dust on the desk.

Even the best piece of machinery gets a hot bearing once in a while.—Ex.

INSTITUTE AND CHAPTER MEMBERSHIP.

The Secretary of the Institute has issued a circular letter to the Secretaries of all Chapters in which the following explanation of Institute and Chapter membership are set forth:

Chapter members, as of December 8th, 1916, retain their standing and will continue to be known as Chapter members. They may be admitted into the Institute as provided in the by-laws, but no new Chapter members are henceforth permissible. Each Chapter has the right to create a class known as Associates of the Chapter, but those who enter that class must agree to make application for admission to the Institute within three years of their admission to associateship with the Chapter, will have no vote upon Institute affairs during their associateship, and failing to enter the Institute within the prescribed period, will automatically forfeit their affiliation with the Chapter.

Applications for such associateship cannot be made until the Chapter creating such a class has amended its constitution and by-laws to conform with the mandate of the last convention which abolished further Chapter memberships, and provided that the associate class might be established by any Chapter which so wished.

It is no longer necessary, however, for an intending applicant for Institute membership to be affiliated with or belong to a Chapter. Application for admission to the Institute may be made direct to the Institute, in which case the application follows the prescribed routine. If elected, the new member is assigned to the Chapter in the territory of which he practises, or, upon request, to the Chapter in the territory of which he resides. From the foregoing it will be seen that the Chapters will ultimately be composed of Institute members and associates of the Chapter.

Institute members will be transferred, in the future, from one Chapter to another as follows: The member will obtain the usual credentials from the Secretary of the Chapter which he is leaving, forward them to the Secretary of the Institute, and receive therefrom an assignment to the new Chapter.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

"Do what you are paid to do—and then some—it's the then-some that gets your salary raised."—James B. Miller.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Barrett Specification Roofs

An Ideal Factory— and an Ideal Roof

THE modern manufacturer floods his workrooms with sunshine, and his workmen keep in better health and do better work. Here is one of these factories. It is built in the most modern and scientific manner and is covered with a Barrett Specification Roof.

This is not to be wondered at. The wonder would be if some other type of roof had been specified, because most of the permanent structures of the country are covered with Barrett Specification Roofs.

This preference is due to the fact that such roofs cost less per year of service than any other kind; that they are free from all maintenance expenses and, further, because they are guaranteed for twenty years.

In addition, Barrett Specification Roofs take the base rate of fire insurance and are approved as "Class A" construction.

This combination of 20-Year Guaranty with low cost and low insurance rate has put these roofs in a class by themselves.

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. **DAVID FRANCE CO.,** Tasker Street, Wharf, Delaware River, Philadelphia.

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete. But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder. "You'll find one of these Base-board Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

Sheds (7) (extension), Waverly Transfer,

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

You Don't Waste Time and Energy

Chasing out "FALSE ALARMS" when you use DAILY BUILDING NEWS. Every item is carefully verified BEFORE IT GOES OUT—you receive all necessary details. It costs a trifle more than the "slush" building news in the daily newspapers, but—

IT'S WORTH THE DIFFERENCE.

If you don't know at the psychological moment, who's building—you lose the job. We "put you next" before the news becomes common property. We give you ALL the NECESSARY DETAILS. Let us show you, by samples, just how thorough, and accurate, and timely is our—

DAILY BUILDING NEWS SERVICE.

One small job pays for the service for an entire year. "Get wise" to a good thing. Address

Daily Building News
PERRY BUILDING - PHILADELPHIA

USE
Cell-Board

For Lining Bungalows, Damp Walls, Attics, Garages, Poultry Houses, Etc.

Thoroughly established as the most economical material for interior lining. Artistic, quickly installed, durable and dependable, it is just what you are looking for. It has been called by many "The Board without a Peer." Cell-Board's the real board.

James E. Tague & Co.

Specialists in Factory and Jobbing Lumber

Lumber Yards Philadelphia Agency

RAILINGS AND GATES OF CHARACTER AND BEAUTY

Iron Railings and Entrance Gates of appropriate design and perfect proportion would add much to the dignity and attractiveness of many country places. In other locations, for the protection of lawns and gardens, an

ANCHOR POST FENCE

with galvanized steel posts and woven wire panels, makes an admirable and long lasting enclosure.

We have catalogues illustrating Entrance Gates and Iron Railings, Lawn Fences, Tennis Court, Poultry and Kennel Yard Enclosures, Aviaries, Arbors, Trellises, etc., and will gladly mail you the one you need.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

Per Gallon, \$3.00

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 19

PHILADELPHIA
May 9, 1917

As The Editor Sees It

IN a recent number of THE GUIDE I made bold to venture a suggestion.

Briefly stated, the suggestion was that the drawings, plan and perspective, sketches and architectural accessories, recently exhibited at the Art Club, be placed on exhibition at the main and branch high schools, at the city's recreation centers and in turn at the various free libraries of the city. It was my idea to have popular interest in these exhibitions enhanced by lectures on topics related to architecture—the underlying purpose being the education of impressionable minds to an appreciation, first, of what constitutes good art and, second, the high and important relation good architecture bears to the formation of national taste. My little suggestion awakened about as much interest, among the architects, as a pebble dropped into the sea might be expected to awake among the denizens of the deep. However—

It has long been a subject of some interest to me, the apparent indifference on the part of the great lay public to the outstanding charm of gracefully conceived buildings. It has been a source of some perplexity to me to account for the apathy with which the man and woman of taste, in other channels, appear to regard the architectural exhibition.

To me, an architectural exhibition is quite as interesting in its way, as an exhibition of paintings, or of sculpture, or of craftsmanship in furniture, or metal, or pottery.

I enjoy a cleverly executed piece of structural designing with as much keenness as I do a brilliant bit of brush work. A deftly done architectural sketch arrests my interest with quite as much of compelling charm as a master trifle in a book illustration. I can admire black-and-white as ardently as the Venetian touch in water color or in pastel.

THE April number of the *Journal of the American Institute* comes to me, in the circumstances, with a certain timeliness. Adopting as its text an article in the *New York Tribune*, in which, commenting upon the recent exhibition of the Architectural League of New York, Mr. Cortisoz deprecates the mixed character of that exhibition and reaffirms his conviction of last year by challenging architects to an exposition of their work which shall be intimately architectural and not lost or hidden among the work of the painters, the sculptors or the decorators, the *Journal* proceeds to say:

"On first thought it would seem just as reasonable to undertake an exhibition of newspapers as it would to assemble an exhibition of architecture. The world is so full of buildings of every conceivable kind that one might well ask why it was necessary to have an exhibition of architecture. If a man cannot be interested in the infinite variety of structures among which his daily life is cast, then how is he to be interested in the pictorial presentation of those and other buildings. The test of architecture is the building. It is not the drawing, nor the rendering, nor the photograph. To really study architecture one must study buildings. To study it seriously, one must look behind the pleasing or displeasing facade and consider the purpose, the facility which the building offers for carrying out that purpose, and the plain facts of soundness, durability, and income-producing value. This last factor is apt to be something of a shock to the academician, and yet that is the most insistent test to which modern architecture has to respond. It is idle to ignore it, futile to dismiss it. Study the architecture of the past as we may, enjoy it as we do, be inspired by it as we must, we cannot get away from the bald

fact that the modern builder wants a fair return on his investment. We may except certain kinds of structures, where the return is of an indirect kind, difficult to evaluate, but we shall still find ourselves confronted with the vast volume of building undertaken as a business investment. Is it not in this field that we find the incongruous jumble which makes the modern city so intolerably ugly? Ought an exhibition of architecture to avert a corrective influence upon this kind of work? Is it for the purpose of informing that large majority of the public that an exhibition should be held, or ought it to be devoted to country-houses and the small class of buildings where the income is not measured in actual money?"

* * *

POSSIBLY that is the question that must first be answered. We can all think of a kind of exhibition that would interest architects. They understand drawings and can read a plan. They can see through and beyond the rendering, the perspective, the elevation, and derive both benefit and pleasure from a study of the methods by which other architects have combined their structures to attain certain ends and yield certain effects of form and color. The technique of the art is at their fingertips. Its alphabet runs through their minds without any effort at translation or decipherment. They are not tricked by methods of presentation which obscure defects of plan and proportion. An elevation can be measured and estimated by the experience which comes from long practice. Its flatness and lack of shadow can be informed with the imaginative eye of the trained mind. Palpable errors in plan stand forth with a clearness that no process of dressing up can hide."

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

BUT it is not so with the untrained. Not one man in a thousand can read a plan, or imagine what an elevation will look like when it is built, or detect the difference between a good building badly or indifferently presented and a bad building which has been dressed out with some blue sky and a landscape. Obviously there must be a distinction made between the kind of an exhibition one would offer as a means of impressing and informing the public and an exhibition which would merit the approval and the keen interest of architects.

"They have an interest in the tools of the trade. Plans, elevations, sections, perspectives—these things which are merely the media through which the building is evolved—possess a power of attraction that is purely professional and technical. As a method of studying architecture it would seem that they are only related to the thing which really tells the story. It is the resultant building that stands as the architectural expression."

* * *

BE the architect ever so skilful a maker of pictures, the one test is the building. It always has been so; always will be so. The presentation of plans and elevations of projected work is not a study of architecture, but a study of the architectural method of building. The presentation of the plans and elevations of a building which has actually been built would seem to be a futile attempt to substitute the portrait for the living body. The one excuse is the opportunity for gathering together, pictorially, examples of architecture from widely distributed areas—of presenting a record of nation-wide or world-wide progress, such as could be viewed in no other way. That is certainly a legitimate purpose."

* * *

BUT if the study of architecture is the study of the building, then every attempt to study it by pictorial presentation is as much removed from the real study as the element of translation enters into the presentation. There is no way of drawing or painting or etching a building without having the result reflective of the artist's conception of the work. Such an exhibition would be interpretative, not accurately architectural, and would afford as many different presentations of a particular building as there were drawings. Such a result is inescapable and brings us face to face with the fact that it is not easy to say how to put together an architectural exhibition that shall be really interesting, and honestly instructive to those who daily move from their homes to their work, from one city to another, from

one land to another, and yet who find no interest whatever in the study of the buildings which meet their eye by thousands."

* * *

WE may possibly except those who travel to Europe, Baedeker in hand, and credit them with an effort to seriously understand the tale which has been written for their perusal, yet it is difficult to find solid ground for believing that such study is reflected in any mighty effort to apply the results to their own environment. We live among an ugliness which is appalling, if one can pause long enough to thoroughly take it all in. But we never do pause. It does not trouble us. We do not even see it. And so, perforce, we must seek to accomplish by an exhibition that which we cannot accomplish by the example before us, for of all the ever-present works of man, architecture may surely claim pre-eminence."

* * *

IT is possible, is it not, that the best exhibition would be one in which drawings, elevations, photographs and models were all presented in such a manner that the novice might trace the whole procedure and thus gain a very definite impression of how the architect pursues his studies and to what purpose he serves his clients. Perhaps the problem is to be solved only by going deeper into what, for want of a better word,

we shall have to call the human equation in the relationship of architecture to modern life. Possibly it might be also well worth while to carefully inquire whether exhibitions are held primarily for the advancement of architecture or for the welfare of the profession. There is a wide difference, and each involves a different method of approach."

* * *

THE subject is not to be discussed as an isolated factor, however, if one wishes to approach it intelligently. The exhibition, as an element in educational influence, is, at best, a substitute for a kind of education which shall eventually train our children to refuse to live in cities and towns which have been made over to other pursuits than those of the common welfare and the common enjoyment. When we have found out how to teach the horror of ugliness, we shall have learned something about how to interest people in architecture."

* * *

EXACTLY, and to my way of thinking no surer, sounder method of approach to an education of the child,—the expanding intelligence of the community,—to the horror of architectural ugliness may be had than the familiarizing of the child, by exposition and by lecture, with the good in architecture. The architectural exhibition that confines its appeal solely to architects can hope to achieve but little.

EDITORIAL NOTES

Building material prices continue to advance in the scale and there is no manufacturer or dealer that is willing to hazard a guess as to the probable limit of the upward movement. The constantly increasing cost of structural commodities is responsible for the fact that a number of noteworthy operations are being held in abeyance, and yet one of the really surprising conditions in regard to the building situation is the number of projects that are proceeding regardless of the high cost of materials. It is to be expected that the purely speculative work will be practically at a standstill, until the prices of materials become normal or at least reasonable. The investor and speculative builder cannot possibly afford to build at the present time on account of the unprecedented high cost and the exceedingly small margin of profit returned.

* * *

According to recent reports from prominent building concerns, one of the factors that the trade will have to contend with will be the shortage of skilled labor. The situation is not considered good at the present time and there is every possibility that there will be a serious shortage as the season progresses and work becomes more active.

The Architectural League of New York has joined the movement to help avert a world-wide famine by cultivating vacant lands. It has formed a food battalion, which will do its patriotic work at Forest Hills Gardens, L. I., with the co-operation of the Mayor's Committee on Farm Gardens and the agricultural department of the Long Island Railroad.

* * *

According to the present schedule the Federal Government will expend about \$115,000,000 in construction work, the bulk of which will be in the East. The navy yards at New York, League Island, Norfolk and the ones on the Pacific Coast are to be improved by the erection of new shops and warehouses to provide facilities for military activities. The building trades will undoubtedly shortly begin to feel the effects of the great amount of Government work, and it is this feature that will assist to a large extent in keeping the industry busy. The preparedness program contains provisions for a very important amount of new construction work and the facilities of the building trades will be taxed to the utmost to complete the operations in schedule time.

United States foreign trade, during March, gained \$156,000,000, as compared with February, both exports and imports showing remarkable gains.

* * *

The National Pipe and Supplies Association will hold its annual convention in Philadelphia, May 9-10. Headquarters, Bellevue-Stratford Hotel.

* * *

The Turner Construction Company has obtained a contract for the erection of two large reinforced concrete storage buildings at the Brooklyn Navy Yard, the total cost of which will be approximately \$2,000,000. This is the first important Government contract to be awarded, and is the forerunner of a mass of important Government work.

* * *

Professor C. R. Richards, Professor of Mechanical Engineering and head of the department since 1911, has been appointed dean of the College of Engineering and director of the Engineering Experiment Station of the University of Illinois, to succeed Dr. W. F. M. Goss, who has resigned to become president of the Railway Car Manufacturers' Association of New York.

* * *

Model houses constructed of cement, sand and rice husks are being erected by the Philippine Health Service. These houses can be built for \$250 and will outlast the unsanitary nipa houses now in general use.

* * *

The Hercules Cement Corporation, 30 East Forty-second street, New York City, announces that W. W. Bailey, formerly connected with the Atlas Portland Cement Company, has been appointed district sales manager.

* * *

George Henry Sargent, president of Sargent & Co., often called the dean of the hardware trade, died of infirmities due to old age at his home in New York City, on Saturday, April 14. He had been identified with the affairs of this company since 1853, until a few years ago. Mr. Sargent was trained at Harvard for the legal profession, but he joined the hardware business established by Joseph B. Sargent in 1849, which was merged into a co-partnership in 1853, Edward Sargent entering it later. In 1864, following the erection of a new plant at New Haven, Conn., the business was incorporated as Sargent & Co. He was a member of, and for two years, president of the Hardware Club, and has also held office in the Union League and Republican Clubs. He was also a member of the University Club and the Harvard Club.

* * *

Mason, Hilton & Co. and the Merrill-Ruckgaber Company have moved their offices to 120 Liberty street, New York, and have associated themselves in the formation of the Cadmus Construction Company, which will continue as constructor of railroad buildings, power developments, dams, bridges, tunnels, coal pockets and other structures.

Metzgar & Fisher, contractors and builders, formerly located in the Denckla Building, announce their removal to new offices in the Otis Building, Sixteenth and Sansom streets, Philadelphia.

* * *

The National Machine Tool Builders' Association will hold its spring meeting at the Hotel Clinton, Cincinnati, Ohio, May 21-22.

* * *

The Giese Art Metal Works, manufacturers of lighting fixtures, announce the removal of their office and salesrooms to 4414 Germantown avenue, Philadelphia.

* * *

The American Society for Testing Materials will hold its twentieth annual meeting at Atlantic City, at the Hotel Traymore, June 26 to 30, inclusive.

* * *

Betz & Drake, architects, of Kingston, N. Y., have opened an office at 56 Second street, Newburgh, N. Y.

* * *

The New Jersey State Association of Master Plumbers will hold its annual convention at Elks Hall, Jersey City, N. J., May 15-17.

* * *

E. A. Wurth, architect, moved his office on May 1 from the Union Building to the Ordway Building, 207 Market street, Newark.

* * *

Horticultural Hall, adjoining the Academy of Music, on Broad street, is to become a theatre. Negotiations for the sale of the property to New York, theatrical interests have been completed. The purchase is said to involve about \$600,000. The property has been on the market for a year. It was sold for the Girard Trust Company, representing the Horticultural Society, which has many stockholders. The negotiations were closed by Bernheimer & Sundheim, representing the purchasers, whose names were withheld. Announcement was made of intention to use the building for theatrical purposes after extensive alterations.

* * *

In the structural work now in progress on the Frankford elevated railroad the Department of City Transit intends to prove that the artistic is not beyond reach in the construction of the stations. Utility and beauty are combined in the designs, which have received the full approval of the Art Jury. Director Twining intends to advertise for bids for ten of the stations this week. In many cases where property was condemned for stations the buildings were not in the best of condition, and were looked upon as unsightly. In their place will be constructed modern brick and terra cotta structures, pleasing in line and color, designed in a simple, sober and logical style of architecture.

* * *

The Merchant & Evans Company has just issued a timely folder directing attention to the staggering total of fire losses due to causes either wholly or partly preventable. Incidentally the company uses the figures as a

pretty convincing argument for the superiority of tin as a roofing material and, of course, "M. & E. Old Method" in particular. Copies may be had on request.

SOME MORE ADVERTISING

"DON'T'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pipkin that there is either something better on the market or your specialty isn't worth a kopeck noway.

The darkest hour in any man's life is when he sits down to plan how to get money with out earning it.—Horace Greeley.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.—Exchange

Library (Logan Branch), Old York road and Wagner avenue, Logan. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Carnegie Free Library, Thirteenth and Locust streets, Philadelphia. Stone, brick and terra cotta, 1 story and basement, 102x85 feet, slag roof, cement floors, hollow tile, metal lath, tile and marble work, hollow metal skylights, ornamental iron work. Architect taking bids, due May 10th. H. H. Burrell, 206 South Quince street; Metzger & Fisher, Otis Building; Jacob Myers & Sons Co., Witherspoon Building; F. A. Havens & Co., 845 North Ninth street; Irvin & Leighton, 126 North Twelfth street; H. E. Batton, Twelfth and Sansom street; Wark, Yardley Co., 1237 Filbert street, are figuring.

Factory and Plating Shop, Stenton avenue, Wayne Junction, Philadelphia. Engineer, Kern Dodge, Morris Building, Philadelphia. Owners, American Metal Works, Armat and Heiskell streets, Germantown. Factory, reinforced concrete, 4 stories, 60x320 feet; plating shop, brick, 1 story, 60x60 feet, slag roof, cement and maple floors (elevators, electric work, plumbing, heating and sprinklers reserved), rolled steel sash, fire doors, metal lath, waterproofing. Engineer taking bids, due May 11th. A. R. Raff Const. Co., 1635 Thompson street; H. E. Batton, Twelfth and Sansom streets; Turner Concrete Steel Co., 1713 Sansom street; Cramp & Co., Denekla Building; F. W. Mark Const. Co., Finance Building; Roydhouse-Arey Co., 112 N. Broad street; Irwin & Leighton, 126 North Twelfth street; I. T. Shoemaker, 1324 Walnut street; Doyle & Co., 1509 Sansom street; Wark-Yardley Co., 1737 Filbert street; Eugene Tourison, 1001 Chestnut street; Wills-Ludwick Co., 34 S. Seventeenth street; Monaghan & Loose, Inc., 3016 Chestnut street; Milton S. Grawl, Bulletin Building, are figuring.

Store Building, 812 North Broad street, Philadelphia. Architect, LeRoy B. Rothschild, Bulletin Building, Philadelphia. Owners, R. A. Heymann & Bro., Widener Building, Philadelphia. Stone and brick, 3 stories, 20x160 feet, slag roof, steam heating, electric lighting, tile work, pine floors, (1) elevator. Architect has received bids.

Elevated Rwy (Contracts 521-22-23), Frankford, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Dept. of City Transit, Wm. S. Twining, director, 754 Bourse Building, Philadelphia. Concrete track floor, cast iron and steel floor drains, and reinforced concrete slab footwalks (Callowhill to Indiana streets, 15,630 linear feet, and Indiana avenue to Dyre street, 15,000 linear feet). Owners ready for bids, due May 22d at noon.

Building No. 2 (fire repairs), Thompson and Aramingo streets. Engineer, H. G. Hill, care of John T. Lewis Bros. & Co., 2545 Aramingo streets. Owners, John T. Lewis Bros. & Co., Lafayette Building, Philadelphia, Pa. Brick, 3 stories, 136x39 feet, slag roof (elevators, lighting and heating reserved), concrete and pine floors, hollow metal sash, rolled steel skylights, fire doors, metal lath, wire work. Owners taking bids, due May 14th. Turner Concrete Steel Co., 1713 Sansom street; Roydhouse-Arey Co., 112 North Broad street, and Cramp & Co., Denekla Building, are figuring, in addition to those previously reported.

Community Garage, Germantown ave. and

Venango street, Philadelphia. Architect, private plans. Owner, Geo. F. Stuempfig, 5430 Wayne avenue, Philadelphia. Brick, 1 story, 16x37 feet and 19x72 feet, slag roof, cement floors (plumbing, heating, electric work and gasoline storage system reserved). Owner taking bids, due in ten days. Jacob Y. Loux, 1121 Rising Sun avenue; H. E. Sweger, 4435 North Uber street, and Henry P. Schneider, 3713 Old York road, are figuring.

Factory (alt. and add.), Berkley street, between Wayne and Greene street. Architects, Ballinger & Perrot, Seventeenth and Arch sts., Philadelphia. Owners, Arguto Oilless Bearing Co., on premises. Brick, stone and reinforced concrete, 2 stories, 30x94 feet, slag roof (heating and lighting reserved), cement and maple floors, tile, marble and terrazzo work, metal lath, hollow metal sash and skylights, Almetal fire doors, roof ventilators, ornamental wire work. Architects taking bids, due May 10th. Samuel Harting, 20 E. Johnson street; Wm. C. Wright, 22 Harvey street; Wm. J. Gruhler & Co., 219 E. High street; Ketcham & McQuade, 1029 Brown st.; A. R. Raff Const. Co., 1635 Thompson street; P. Haibach Cont. Co., Twenty-sixth and Thompson streets; Barclay White & Co., 1713 Sansom street; Wark-Yardley Co., 1737 Filbert street, are figuring.

Residence (sun parlor add.), 815 E. Haines street, Germantown. Architect, H. H. King, 6331 Greene street, Germantown. Owner, August Baur, 815 E. Haines street, Germantown. Frame, 1 story, 12x30 feet, tin roof, canvas floors. Architect has received bids.

Club House, 4224-26 Baltimore avenue. Architect, not selected. Owners, Masonic Club of West Philadelphia, 4010 Chestnut st., president, John C. Vogel, 906 South Fifty-fourth street, Philadelphia. Stone and brick, 3 stories, 60x60 feet, and 1½ stories, 80x60 feet, consists of general interior alterations. Work to be started about June, 1917.

Residence (int. alt.), 1825 North Broad st., Philadelphia. Architect, private plans. Owners, Temple University, Broad and Berks sts., Philadelphia. Consists of interior alterations and changing present rooms into class rooms. Work contemplated.

Office Building, southeast corner Fifty-eighth and Woodland avenue, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, J. Gibson McIlvaine & Co., on premises. Brick, stone and reinforced concrete, 2 stories, 47x32 feet, slag roof (lighting reserved), hot water heating, maple floors, marble and terrazzo work, hollow metal sash, kalamein doors, metal lath, safety treads, ornamental iron work, wire work. Architects taking bids, due May 14th. Irwin & Leighton, 126 N. Twelfth street; P. Haibach Cont. Co., Twenty-sixth and Thompson streets; Ketcham & McQuade, 1029 Brown street; H. E. Batton, Twelfth and Sansom streets; A. R. Raff Const. Co., 1635 Thompson street; Harrison C. Rea Co., 1029 Wood street, and Barclay White & Co., 1713 Sansom street; F. B. Davis, 240 North Sixteenth street, are figuring.

Store (alt.), Arch street, near Eighth st., Philadelphia. Architects, Hoffman Co., Finance Building, Philadelphia. Owners, Dannenbaum Bldg., on premises. Consists of new bulk and entrance doors (oak). Architects have received bids.

Garage, Wissahickon avenue and Westview

street, Germantown. Architects, Duhring, Okie & Ziegler, 1218 Chestnut street, Philadelphia. Owner, Royal Hammett (Crew, Levick Co.), Land Title Building. Stone, 1½ stories, (2 cars). Plans in progress.

Office Building (alt.), Twelfth and Thompson streets, Philadelphia. Engineer, Chas. A. Blatchley, Drexel Building, Philadelphia. Owners, Schutte & Koerting Co., on premises. Interior alterations, plastering, repairing floors, new partitions, steam heating, iron stairs, ornamental iron work. Engineer taking bids, due May 9th. H. E. Batton, Twelfth and Sansom streets, is figuring.

Recreation Buildings, League Island Park, Philadelphia, \$120,000. Architect, Ralph E. White, Pennsylvania Building, Philadelphia. Owners, City of Philadelphia, Dept. of Public Works, care of Geo. E. Datesman, director, City Hall. BOTH PHONES

FROM THE
PRESIDENT'S PROCLAMATION

April 15, 1917

"TO the men who run the railways of the country, whether they be managers or operative employees, let me say that the railways are the arteries of the nation's life, and that upon them rests the immense responsibility of seeing to it that those arteries suffer no obstruction of any kind, no inefficiency or slackened power.

"To the merchant let me suggest the motto, 'Small profits and quick service'; and to the shipbuilder the thought that the life of the war depends upon him. The food and the war supplies must be carried across the seas no matter how many ships are sent to the bottom. The places of those that go down must be supplied and supplied at once.

"To the miner let me say that he stands where the farmer does. The work of the world waits on him. If he slackens or fails, armies and statesmen are helpless. He also is enlisted in the great service army.

"The manufacturer does not need to be told, I hope, that the nation looks to him to speed and perfect every process; and I want only to remind his employees that their service is absolutely indispensable and is counted on by every man who loves the country and its liberties.

"It is evident to every thinking man that our industry on the farms, in the shipyards, in the mines, in the factories, must be made more prolific and more efficient than ever, and that they must be more economically managed and better adapted to the particular requirements of our task than they have been; and what I want to say is that the men and the women who devote their thought and their energy to these things will be serving the country and conducting the fight for peace and freedom just as truly and just as effectively as the men on the battlefield or in the trenches.

"This is the time for America to correct her unpardonable fault of wastefulness and extravagance. Let every man and every woman assume the duty of careful, provident use and expenditures as a public duty, as a dictate of patriotism which no one can now expect ever to be excused or forgiven for ignoring."

In accordance with the suggestion of the President that his appeal receive widespread publicity, these extracts from his Proclamation occupy the advertising space scheduled for this month by The Autocar Company, of Ardmore, Pennsylvania.

Low bidders, McCloskey & Bahls, 1620 Thompson street, Philadelphia.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

Small ideas, small methods, small men are becoming antiquated. This is the day of the broad outlook and big doings.

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. DAVID FRANCE CO., Tasker Street, Wharf, Delaware River, Philadelphia.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

A hen is the only kind of a critter that can produce something by sitting down and doing nothing.—Exchange.

Buy pure lime, 99% pure, no core, no grit. **DAVID FRANCE CO.**

The trouble with some advertising is that it is like the conversation of certain people—it never says anything.—"Novelty News."

He would save the commission of the architect, but ruin the store.

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete. But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder. "You'll find one of these Baseboard Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

Piano Show Room, 1019 Chestnut street, \$2,000. Hurlitzer Piano Co. (O), 1017 Chestnut street. Ketcham & McQuade (C), 1029 Brown street. Wood floor, plastering, metal lath, new doorway.

of carelessness on the part of the contractor or workman, or both. The contractor does not take sufficient care in the construction of the scaffold or desires to economize in cost, and the workman is not willing to take the time to assure himself that the platform or scaffold from which he is to work is secure and safe.

In order to reduce the number of fatal and serious accidents incidental to building and other forms of construction work, it will be necessary for the contractor to make sure, first, that the structures and equipment used by the mechanics are absolutely safe, and second, that the employees are trained and encouraged to think in terms of "Safety First."—New York "Real Estate Record."

Be a booster. Boost business, boost the trade, boost your own goods. And don't overlook the fact that the greatest medium ever devised for the boosting process is printer's ink.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., April 24, 1917.—Sealed proposals will be opened in this office at 3 P. M. May 15, 1917, for the installation complete of an electric mail elevator, etc., in the United States post office and courthouse at Philadelphia, Pa., in accordance with the drawing and specification, copies of which may be had at this office in the discretion of the Supervising Architect.—James A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 3, 1917.—Sealed proposals will be opened in this office at 3 p. m., June 12, 1917, for the construction of the United States post office at State College, Pa. Drawings and specifications may be obtained from the custodian of the site at State College, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., April 30, 1917.—Sealed proposals will be opened in this office at 3 p. m., May 28, 1917, for changes in plumbing, gas piping, conduit and wiring and lighting fixtures, in the United States Post Office at Beaver Falls, Pa., in accordance with the specification and drawings, copies of which may be had at this office or at the office of the custodian, Beaver Falls, Pa., in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

BUILDING ACCIDENTS

According to the bulletin recently published by the New York State Department of Labor, the number of preventable accidents that happen in the building trades would seem to be entirely out of proportion to the number of men employed. Compared with the number of accidents to factory employees, the building trades make a very poor showing. The total of accidents in the structural trades indicates that adequate measures should be taken at once not only to reduce the hazard, but also to educate the employees in the building trades in the principles of "Safety First." Approximately four times as many people are engaged in the factories of New York State as are employed in building and construction work, yet, during the four years from October 1, 1910, to September 30, 1914, more fatalities due to accidents occurred in construction work than in factories. In the building trades there were 1,641 accidents ending fatally, and in factories, including 204 deaths resulting from three large factory fires, there were but 1,285.

Carelessness is unquestionably one of the great factors responsible for the number of accidents in the building trades. While in many respects the contractor in charge of the operation may be blamable for permitting the hazard to exist, the accident is very often the result of a careless attitude on the part of the employee. Falls are among the most common forms of accidents in construction work. Carelessness is the prime reason for

the falls. Mechanics engaged in the erection of buildings and in other branches of construction work become so accustomed to working at great heights and in such perilous positions that they often cease to have a proper regard for the hazard entailed. The old aphorism "Familiarity breeds contempt" is quite true of the attitude of the average mechanic working on the construction of a modern building. When this attitude is encouraged by the contractors in order to make better time or for the sake of economy in some form or other, accidents are certain to follow.

Many of the fatal accidents that occur in building are due to the fact that the scaffolding upon which the mechanics and laborers are working is not properly anchored, not of sufficient strength to support the loads imposed, or built of old and partly decayed timber and lumber. Sometimes the scaffolds are without the required guard rails, contain loose boards or are in some other manner a hazard to the employee called upon to use them. Accidents which naturally follow the neglect of the contractor or his representative on the job cannot be attributed to carelessness on the part of the workman, but the workman can assist in the reduction of the number of accidents by noticing the defects in the construction of scaffolds and false work from which they are to work, and insist that their safety be provided for.

Building accidents generally are the result

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

Per Gallon, \$3.00

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural

VOLUME XXXII

Number 20

Engineering and the Building Trades

PHILADELPHIA

May 16, 1917

As The Editor Sees It

UNDER the caption, "The High Cost of Building," Theodore Starrett has an editorial in the April number of *Architecture and Building* that presents some interesting ideas touching conditions that, in his judgment, are responsible for the advance in building costs. "Building is a costly thing," writes Mr. Starrett. "How much of the heaped-up expense is due to architects who *insist on designing everything so that it is special and not standard*, and how much to the difficulties of building management per se I do not pretend to state. Combinations are pretty hard things to keep up in these giddy-paced times. There are too many candidates, too many mouths to feed for me to believe that combinations in the building business are much of a burden to the body politic." The inspiration for this Starrett outburst is a bulletin recently put out by an architectural society in which the higher cost of building is attributed to combinations of builders and material men—"gentlemen's agreements."

* * *

I AM reminded of a story of an architect out in San Francisco," says Starrett. "It was just after the great fire. The town was full of builders from all over the United States. They got a glad hand and a cold shoulder—if you can imagine such a combination—from all the local builders. The town was also full of architects from all over the United States. The clubs were bulging with them. Highbrows met who hadn't seen one another since the days of dear old Paris and the Ecole des Beaux Arts. I suppose there was a lot of glad-handing and cold-shouldering among them, too.

"Well, in spite of the competition of numbers there was no competition in price. It was too risky. The California

law was too strenuous for the outsiders to take any chances with, and it resulted in what our friends of the bulletin above referred to call a gentlemen's agreement. No builder would take a contract except on percentage."

* * *

THE architect, whom I propose to tell you about, was one of the local contingent; he had a number of clients and when he talked it was business that was not exactly up in the air. He wanted to induce some deep-chested general contractor to take a straight ol fashioned contract, and he sounded a number of them to see if they could not be persuaded to break the gentleman's agreement.

"Now I will pause here to impress on your mind, little builder, that there was no gentleman's areement this time. There was no combination. It was simply a case where once in their lives the builders who were gathered in the city were all impressed with the seriousness of their work and all stood fast in their resolve to let the profiteers of building, namely, the owners, take the chances."

* * *

BUT my architectural friend persisted in his efforts. One builder that he attempted to exploit was made the object of a great many attentions, entertainments, dinners and all that sort of thing.

"The builder listened to his plea.

"Now, what I want you to do," said the architect "is to take a contract for this work. Show these percentage fellows that you have some nerve."

"Then, to the suggestion from the builder that if such a thing was done it would, of course, be at a prohibitive price, the architect replied, 'No. No, Indeed. I want you to take this contract at a low price. I know how much the job is worth. You take this job at'—men-

tioning a ridiculous price such as architects of that kind are accustomed to offer. 'You take this job at that price and you will get the cream of the building work in this town.'"

* * *

THE price offered was one at which there would have been a loss of \$100,000. The builder told the architect so. It didn't phase the architect. He unblushingly avowed that it didn't make any difference if the loss was \$200,000, it would pay the builder just the same. In fact, the greater the loss, the greater the glory.

"The builder was not that kind of a person—meaning that the argument did not appeal to him. The gentleman's agreement' was not broken by him, nor as far as I ever learned, by a single one of the builders who helped during the next year or more in the work of rebuilding the city."

* * *

ONLY the other day here in Philadelphia public work of a structural order put up for bids failed to enlist a single bidder. Deliveries are so uncertain, the question of material costs so "jumpy," the labor market so badly demoralized that the men who are usually ready to take a chance on work of the kind simply declined to risk it.

One of the gambling elements in the present situation is his majesty, the sub-contractor. While everything runs soothly the sub can be depended upon. When the outlook becomes squally the sub simply ducks from under.

The outlook is that a good deal of the building to be done within the next few months will be done on a percentage basis or not done at all. I note that some of the builders are already stipulating on their business stationery that they are prepared to accept contracts on the "cost-plus-a-fixed-sum basis only

THE labor question is one of the most serious aspects of a badly-muddled situation. Discussing this phase *The New York Real Estate Record* remarks:

"At the present writing there is and has been for some time past a serious shortage in the supply of labor which already has exercised a depressing effect on the building trades, more particularly in the manufacture of structural commodities. The recent popularity of employment in the munition factories and other industries that have sprung up as a result of the European War is generally blamed for the scarcity of skilled labor. The situation unquestionably has reduced the ranks of skilled mechanics for construction work and with the existing shortage, the new military conditions will be felt keenly, no matter how small a percentage of the proposed draft is taken from the ranks of the building industry.

"According to the terms of the selective draft measure only those men of military age will be excused from service who are physically unfit or who are conceded to be more urgently needed in the manufacture of war munitions and supplies, the operation of public utilities and the production of foodstuffs. The latter classification is of primary importance at present as the outcome of the conflict is largely dependent upon the ability of this country to feed itself as well as the Allies. The men relieved through this channel include farmers and farm laborers, workers in packing plants and employees of other industries that are allied to the production and distribution of food.

"Under these conditions the building trades are entirely eliminated and will be called upon to furnish its full share to the army. There will likely be a greater scarcity in the labor market and a further tightening of the lines experienced by all interested in the industry. In connection with this, however, the main difficulty will not be caused by the number of mechanics required for military service, but rather because of the fact that the Federal Government has arranged such an elaborate program of construction work for training and defensive works that the labor market practically will be cleaned out for the next coming six months or a year. This condition has already made itself felt throughout the trade and is a matter that will be adjusted with difficulty."

* * *

ANOTHER thing that will have a decided tendency to effect the building business as applied to labor conditions is the large number of skilled mechanics to be requisitioned for the construction of the large merchant fleet now projected and for which work

has already been started both on the Atlantic and Pacific Seaboards. The construction of this fleet will call for the services of thousands of carpenters, iron workers, steam fitters, painters and other trades, that while having no previous experience in shipbuilding, are such a flexible type of skilled labor that it will readily adjust itself to different work. These men undoubtedly will flock to the shipyards in great numbers, not so much for the higher wages offered, but from a high sense of patriotic duty.

"The present time is altogether too early to become pessimistic as to the ultimate economic effect of the war conditions upon the labor situation, but it is the time to prepare for what is known to confront the industry and provide some means of combating a situation that has bothered the trade for a long time."

* * *

FROM the *National Builder* I am enabled to reprint here certain observations on the advantages of the percentage system over competitive bidding:

The percentage system involves taking the work on a basis of the cost-plus-percentage, which includes overhead, supervision and profit. The amount of the margin varies, but 15 per cent. is about the average at which most jobs of this kind are handled. The maximum figure which is named on the job is usually the architect's estimate; and while one possible advantage of the percentage system, from the standpoint of the builder, is that he is protected in case of unusually expensive features unexpectedly developing, the company above referred to has found that the estimate is ordinarily sufficiently liberal to enable it to be used as a maximum basis on which to figure the work.

The defects of the system of competitive bidding are obvious. The man who knows least about the cost of doing the work is often the successful bidder—for this reason. The percentage system enables the owner to discriminate and to select the concern which has earned a reputation for good work and reliability, as he is then protected from excessive costs by the arrangement described. In other words, a premium is put on good work, rather than merely on the ability to bid low.

* * *

THE average owner is willing that the contractor make a fair profit on his work; and it is also plain that if a contractor sees that he is likely to lose money on a job he will be tempted to "cut the corners" wherever he can for the sake of making his net loss as low as possible. This does not always happen, of course; for many concerns

would rather lose money on a piece of work than risk losing the good-will of the customer. Nevertheless the temptation to slight the quality, when it is found that a bid which is too low to cover the cost has been made, is present, and it is doubtless has its effect in a good many cases.

One of the chief advantages to the contractor is that suggested above. He can get the benefit of accumulated good will and the prestige which goes with a record of big jobs well handled. While it is not necessary that the architect let the contract in every case to the low bidder, the inclination is always in that direction; and thus the inexperienced and the unskilled, who know neither how to figure the cost of a job nor how to handle it to the best advantage, are likely to get work to which those who have proved themselves in previous jobs are really entitled. That is one of the glaring weaknesses of the present system. The lowest and best bidder is the man to whom the contract, in theory should be awarded; but in actual practice it is more often the low man than the best man who gets the business. Contractors have learned this, and know that only when their bid is pretty close to the bottom will they be given serious consideration.

SPACE FOR A SMILE.

TAKING CARE OF EVERYTHING.

They were a very saving old couple, and as a result they had a beautifully furnished house.

One day the old woman missed her husband.

"Joseph, where are you?" she called out.

"I'm resting in the parlor," came the reply.

"What, on the sofa?" cried the old woman, horrified.

"No, on the floor."

"Not on that grand carpet!" came in tones of anguish.

"No, I've rolled it up!"

THEIR NATURAL FINISH.

Mary: "Doesn't Ida keep her hardwood floors in beautiful condition?"

Alice: "Perfect. Everyone who goes there is carried out with a fracture or a dislocation."—"Harper's Bazaar."

NO DIVING FOR PAT.

An Irish laborer working on the roof of a building was too nervous to come down. Pausing at the top of the ladder for awhile, Pat saw the foreman watching him.

"Come down," said he to Pat.

"I'm afraid, sir," replied Pat.

"Come down the same way as you went up," addressed the foreman.

"No fear," retorted Pat. "I went up head first; I'm not coming down that way."

EDITORIAL NOTES

Announcement is made by the Board of Directors of the Master Builders' Exchange that the resignation of Charles Elmer Smith, secretary of the Exchange, offered a month ago, had been accepted with great regret. William H. Barrett, assistant secretary, has been elected secretary, to succeed Mr. Smith.

William H. Barrett.

Mr. Smith has been secretary and general superintendent of the Builders' Exchange for twelve years, and in that time has acquired a wide knowledge of the manufacturing industries allied with the building trade, having made a close study of the various products entering into modern construction, and there is said to be no one in the city better informed on these points, perhaps, than the retiring secretary of the Exchange.

Mr. Barrett, the new secretary, has been assistant secretary of the Exchange for the past nine years, and in that period has acquired a wide knowledge of building conditions in this city. He was graduated from Girard College in 1898. He is secretary of the Trades School, which was started by the Builders' Exchange more than a quarter of a century ago, and of which the City Manual Training Schools are an outgrowth, and is secretary of the Advisory Board of the Exchange, to which body the city is largely indebted for the absence of labor troubles in the building trades in the past ten years.

* * *

The Noe-Wadlow Company announces its removal to Second, Oxford and Palethorp streets, Philadelphia, where added equipment and enlarged shop and yard room have greatly increased their facilities for serving the trade. The company handles structural steel shapes, bars, metal lath, expanded metal, corner beads, etc.

* * *

The continued advance in the prices of structural materials and the difficulties experienced in obtaining deliveries in a reasonable space of time has practically stopped speculative and investment building. As a matter of fact, some of the architects that are prominently identified with work of this character have advised their clients to hold off projected construction until such time as the material prices are reduced to a figure that would make proceeding profitable. Under the existing circumstances there is no margin of profit for the investor and builder. While there is an acknowledged demand for new

buildings, both for living and commercial purposes, the present scale of rentals does not cover the cost of construction, and as these cannot well be further increased it is advisable to wait for better conditions.

* * *

Aside from the effect of the National situation upon the building trade, there probably is no greater factor blamable for the present condition than that of the intolerable freight congestion and car shortage. This has maintained far too long, and it is the consensus of opinion in the trade that a large percentage of the existing high prices of structural materials is directly traceable to the railroads. The manufacturers are willing and able to turn out sufficient quantities of materials for all needs, but they have been greatly hindered by being unable to obtain raw materials and also by being unable to make shipments of finished products. Until this condition is relieved, either by the railroads of the country making a determined effort to adjust matters by buying sufficient freight cars and providing adequate yard space or by the Government stepping in and compelling them to improve the service, the building trades are bound to suffer. The matter has now been a depressing factor for a lengthy period and it is time some measures were taken to bring the railroads to terms.

* * *

'Reducing Vibration and Noise' is the title of a small pamphlet describing the nature and application of Nonpareil cork machinery isolation. Machinery has to be installed in many locations where the rumble of its operation is a decided nuisance. That its vibration and noise can be largely overcome by properly installed cork insulations may often be of great advantage in construction work. This new pamphlet, issued by the Armstrong Cork Company, of Pittsburgh, Pa., describes the material and its application, gives tests, tables and diagrammatic instructions of the methods of installation.

* * *

The Pennsylvania Wire Glass Company have just issued a pamphlet setting forth the merits of their wire glass. There are a number of attractive illustrations presented showing skylights, railroad train sheds, factory buildings, office buildings and some views of an interesting private garage in which wire glass is used for all the glazing.

* * *

Mr. S. B. Newman has left the Master Builders' Company to enter business for himself, selling the same products as those of the Master Builders' Company. He has taken in partnership with him Mr. M. F. Cavallon, who was also connected with the New York office of the Master Builders' Company for a number of years. Their company is now known as the Newman-Cavallon Company, Inc., of 8 West Fortieth street, New York.

They handle 'N-C' concrete hardner, 'N-C' liquid hardner, 'N-C' waterproofing paste, 'N-C' waterproofing powder, wall peds and floorpeds.

* * *

The firm of Austin & Kanter, contracting electrical engineers, of 87 Fifth street, Long Island City, has been dissolved, and Mr. Austin has taken R. E. Moore into partnership. The business will be continued under the name of Austin & Moore at the same address.

* * *

Tracey & Swartwout, architects, have moved their offices from 244 Fifth avenue to 18 West Thirty-fourth street, New York City.

* * *

O. C. Gonnelli, architect, formerly of 800 Broad street, Newark, has moved his office to 189 Market street, in that city.

* * *

Isko Corporation, distributor of Isko, the electric refrigerating unit, has moved its offices and salesroom to 9 Central Park West, New York.

* * *

Charles S. Vought has been appointed assistant general manager of sales of the American Steel Export Company, Woolworth Building, New York.

* * *

H. A. Howard has been appointed manager of the New England office of the C. & C. Electric Manufacturing Company, Garwood, N. J.

* * *

L. E. Tucker, engineer, has moved from 141 Broadway to 29 Broadway, New York.

* * *

Arne Delhi, architect, formerly at 257

George C. Lynch Company, lighting equipment, announces the retirement of Kellogg Birdseye as treasurer and general manager and C. W. Anderson, Jr., as secretary. The Board of Directors has been reorganized and the following officers and directors elected: George C. Lynch, president; Francis G. Plant, vice-president; C. H. Warfield, secretary and treasurer, and F. P. Warfield and F. S. Viele, directors. Mr. Lynch, who will act as sales manager, is well known in the high-grade lamp and decorative lighting field. Although several of the members of the company are actively associated with the National Metalizing Company, both concerns will maintain their separate identities. The George C. Lynch Company has taken possession of its new offices at 236 Fifth avenue, New York.

* * *

American Society for Testing Materials will hold its twentieth annual meeting at Atlantic City, at the Hotel Traymore, June 26 to 30, inclusive.

A. D. Mellor and A. Hamburger, formerly manager contract department and chief engineer, respectively, for the National Fireproofing Company, New York City, have resigned their positions to open an office at 103 Park avenue, under the name of Mellor & Hamburger, to market the sheet metal building materials of The Berger Manufacturing Company, requiring engineering services. Both are well known in the concrete and reinforcing business in the East.

* * *

National Housing Association will hold its annual meeting at Chicago October 15-17, 1917. Headquarters, Hotel La Salle. For information inquire of Lawrence Veiller, secretary, 105 East Twentysecond street, New York City.

* * *

National Metalizing Company has moved its offices from 333 Fourth avenue to new and larger quarters at 236 Fifth avenue, New York City. The company is at present engaged on several large jobs, including installation of lighting fixtures in the splendid new Hotel Winton, at Cleveland, Ohio. The company has just completed similar work on the new Bonbright Bank, on the main floor of the Equitable Building.

BUILDERS OPPOSE WORK LIMITATION

Protests Sent to Legislature Against Measure
Requiring Architects for All Structures

Action in opposition to the passage of several bills regarded as adverse to the interests of the building trades was taken by the Committee on Legislation of the Master Builders' Exchange, and protests, signed by President Tyson, against the passage of Senate bill 44 and House bills 238, 484 and 740 were forwarded to the various committee chairmen having charge of the bills. The committee approved House bill 1639 and urged its passage.

The first of the proposed Acts objected to is framed to regulate the practice of architecture. The features most objectionable to the builders are requirements for the annual examination and licensing of all architects, requiring that an architect must be more than twenty-five years old, and must have served seven years as a draftsman in the office of a recognized architect or architects, and providing for a fine of \$50 to \$100 for the first violation, and of \$200 to \$500 and imprisonment for a year for each subsequent infraction of the Act.

Would Require Architects.

This Act, it is contended, would prohibit erection of structures by builders from their own plans and would oblige everyone intending to build to employ an architect.

Bill 238 provides for the regulation of advertisement for employees during strikes, lock-outs of other labor trouble; 484 regulates

hours of labor of power plant employees, while 750, it is contended, will prohibit the issue of injunctions by the Courts restraining labor organizations.

Advertisement Necessary.

The bill approved requires that no contract may be awarded by a Board of Education anywhere in this State for any work on public schools amounting to \$300 or upward without due advertisement, and that all such contracts must be let to the lowest responsible bidder. This is the procedure now in Philadelphia, but it is said that the contrary condition prevails in Pittsburgh and elsewhere, many contracts being let without any advertisement or competition whatever to favored builders.

The committee has under consideration an ordinance introduced into Councils recently regarding the maintenance of structures upon or above the sidewalks, such as electric signs, show cases, etc. Action will be taken upon this later.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

CONVERSION OF BUILDINGS.

A decision of general interest, with respect to the conversion of existing buildings to uses for which they were not originally planned or adapted, is contained in a resolution recently adopted by the New York City Board of Appeals.

Alexander C. MacNulty, attorney, on behalf of Dr. Peter Ruccione, lessee, filed with the Board an appeal from a decision of the Superintendent of Buildings, who had denied a certificate of occupancy for a non-fireproof building converted from a private dwelling into a sanatorium, at premises 230 East Fifteenth street, Manhattan. It is proposed to convert this dwelling, which is four stories high, into a building to be used in part as a private sanatorium for the accommodation of not more than twelve patients and in part as a dwelling, without making any structural changes therein.

The Board of Appeals sustained the Superintendent in his decision, denying a certificate of occupancy, in this matter. It takes the view already expressed by the Corporation Counsel in another matter, that "it is the evident intention of the Building Code to prohibit the conversion of existing buildings to uses for which they were not originally planned or constructed unless they conform in construction and safety requirements to the provisions of law applying to buildings hereafter erected for such uses."

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scrapper cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete. But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder. "You'll find one of these Base-board Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

ARTIFICIAL STONE

While Still in Infancy, Product is Gaining in Popularity.

The popularity of artificial stone dates from its introduction to the building trade as a structural material, and while the product is still in its infancy, it has achieved a wide usage on account of its low cost when compared with that of natural stone and also by virtue of its workability. Artificial stone is rapidly superseding the genuine article for all parts of the superstructure of many types of buildings, and particularly in the construction of apartment houses and commercial buildings.

The beginning of the twentieth century marked the manufacture of the first concrete blocks made of Portland cement, and this type of block is now practically obsolete. With the old-fashioned concrete block, not considering its shortcomings as regards to pressure tests, it was necessary to fit the building to the block, as they were made in only a few stock sizes, while at the present time there is much greater flexibility in regard to size and the advanced method of manufacture makes the stone block to fit the building on which it is to be used.

Present day stone blocks are made from full sized details supplied by the architects of the individual building and are susceptible of a wide range in size and color treatment. The architectural profession has numerous opportunities in making this product one of the coming building materials. By the use of artificial stone distinctly individual effects may be achieved and the product can be made to match practically all other structural materials in color and texture. Brick, limestone, sand stone, granite and stucco can be imitated and the material may be used for column caps, ornamental columns, water tables, lintels and sills, and can also be used as a facing material for the upper stories of high buildings instead of the more expensive natural materials.

Usually in the specifications for cast or artificial stone of the best type the architects require a stone block made in a sand mold, packed solid of the same material through and through. Where faced stones, made monolithic with the backing are necessary, the facing is required to be at least one and one-half inches in thickness. Generally the stone is surfaced after it has been removed from the mold. After the molds are packed, the stones are usually left in the wet molds for at least ten days, thus allowing a slow process of hardening. This varies, however, according to the atmospheric conditions, and it is sometimes necessary to allow the block to remain in the mold for as much as thirty days.

The texture and density of artificial stone are subject to very strict specifications, and color is another factor that is always given close attention during manufacture. The method of obtaining the proper color of the finished product is by the proper selection of the aggregates and artificial coloring matter is never used in the best grades of cast stone.

One of the distinct advantages gained through the use of this material in building construction is the fact that there is no cutting and fitting on the ground and hence no waste of material. Whatever cutting is done is of the ornamental sort, and these carvings are done by specialists in that line from models submitted and approved by the architect of the structure, the same as would be done if genuine stone were used. This type of stone work is capable of moulding similar to that of architectural terra cotta, all that is necessary before erection in the building being a small amount of hand tooling, which is done on the job. Artificial stone makes attractive buildings possible at a cost much lower than it would be if natural stone were used.

If you can persuade people to buy your goods you make money. "The Guide rounds up in its clientele the people you want to persuade. A certain amount of space and the right kind of selling argument does the rest.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

Some big guns are smooth bores.—Ex.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Laundry, 5722 Race street, \$22,000. Philadelphia Laundry Co. (O), 5722 Race street. L. H. Smith (C), Hale Building. Brick, 2 stories, 118x102 feet, slag roof.

Garage, Smedley and Erie avenue, \$400. Wilbert Short (O), on premises. Wm. H. Schultz (C), 3340 North Carlisle street. Brick, 1 story, 11x15 feet, slag roof.

Storage Building, 800 to 806 North Hutchinson street, \$4,000. Powers Weightman Rosengarter (O), Ninth and Parrish streets. R. C. Ballinger & Co. (C), 218 North Thirteenth street. Brick, 1 story, 48x42 feet.

Lodging House, 263 North Sixth street, \$1,000. E. S. Armstrong (O), 321 North Ninth street. A. H. Spenard (C), 822 Wood street. Fire repairs.

Dwelling, 4932 Brown street, \$3,800. Michael S. Kirschner (O and C), 421 Snyder avenue. Brick, 2 stories, 16x55 feet, slag roof, hot water heating.

Garage, 736 Lincoln Drive, \$1,200. Mrs. H.

B. Plumer (O), 750 Lincoln Drive. J. A. Dunkelberger (C), 71 Herman street. Stone, 1 story, 19x23 feet, slate roof.

Forge Shop, 2300 East Tioga street, \$2,500. S. A. Ashman & Sons Co. (O), on premises. Robert B. Lederle (C), 830 Witherspoon Building. Brick, 22x80 feet, addition, 1 story, slag roof, rolled steel sash, plank floor.

Garage, Twelfth and Somerville avenue, \$400. John B. Mayer (O and C), Broad and Cayuga. Stone, 1 story, 17x23 feet, metal lath, concrete floor.

Dwelling, 4100 Manayunk avenue, \$2,500. M. Dura (O and C), 4151 Cresson street. Stone, 2 stories, 24x26 feet, asbestos roof, hot water heating, pine floors.

Dwelling, Lawndale avenue and Cottman street, \$2,350. Karl Butter (O), 2345 North Fourth street. Wm. G. Isles & Son (C), 1103 Lerick street. Brick, 2 stories, 14x38 feet, slag roof, hot air heating.

Bungalow, Bingham and Vincent streets,

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

\$2,350. M. R. Moore (O), 3445 North Water street. Wm. G. Isles & Son (C), 1103 Levick street. Frame, 1 story, 24x40 feet.

Garage, Lincoln and Springer street, \$1,500. S. Heiter (O), on premises. James N. Mitchell (C), Forty-sixth and Market streets. Hol low tile, 1½ stories, 25x20 feet, tile roof, concrete walls and floor.

Factory, American and Cambria streets, \$3,600. Haffleigh & Co. (O), on premises. Drehmann Paving Co. (C), 2622 Parrish street. Steel beams and concrete.

Garages (2), Fifty-ninth and Chestnut streets, \$300. B. J. Tlyn (O), 4011 Market street. F. H. Whiteman (C), 409 Harrison Building. Iron on iron.

Garage, City Line and Church Road, \$2,500. James Gilfillan (O), West End Trust Building. F. A. Havens Co. (C), 845 North Nineteenth street. Stone, 2 stories, 20x23 feet, slate roof.

Wagon Shop, 407 North Randolph street, \$5,200. Frank Schanz (O), on premises. Herman Voight (C), Twenty-eighth and Thompson streets. Brick, 1 story, 46x63 feet, slag roof.

Dwelling, 338 East Price street, \$2,500. Leandren Aylone (O), 336 East Price street. John H. Frith (C), 5817 Osceola street. Brick, 2 stories, 16x43 feet, slag roof, hot water heating.

Store House, 3218 Chestnut street, \$300. Kal Pheno Chemical Co. (O), on premises. France & Mussar (C), 3324 Chestnut street. Brick, 1 story, 10x12 feet, fire doors, concrete slabs.

Chapel, Tenth street and Northeast Boulevard, \$36,000. First Christian Church (O), care of architects. Architects, R. B. Beucker Price & McLanahan, Bellevue Court. P. Borthwick (C), 8018 Germantown avenue. Stone, 2 stories, 73x53 feet, slag roof, hot water heating, hemlock flooring.

Garage, Sixty-second and Cedar avenue, \$8,000. Armenag Mahjoubian (O and C), 642 South Sixtieth street. Brick, 2 stories, 40x94 feet, hot water heating.

Dwellings (4), Silverwood and Fountain streets, \$7,200. Albert Keller (O and C), 4540 Manayunk avenue. Brick, 2 stories, 14x30 feet, slag roof, hot air heating.

Factory, Broad and Brown streets, \$45,000. Roy A. Heyman & Bro. (O), Weidener Building. Turner Concrete Steel Co. (C), 1713 Sansom street. Stone and terra cotta, 4 stories, 40x97 feet, slag roof.

Station, Fox and Hunting Park, \$160,000. Philadelphia Electric Co. (O), 1000 Chestnut street. John R. Wiggins, Inc. (C), Otis Building. Brick, 1 story, 134x145 feet.

Crane Runway, Richmond and Norris sts., \$5,000. Wm. Cramp & Sons Shipbuilding Co. (O), Philadelphia. Hoffman Eng. and Const. Co. (C), Pennsylvania Building. Iron on iron, 1 story, 42x132 feet.

Dwelling, 3323 Vankirk street, \$350. Wm. Turner (O), on premises. R. Philips (C), 6443 Tulip street. Brick, 1 story rear addition, 10x10 feet, slag roof.

Dwelling, 1912 Pine street, \$3,500. Benj. J. Taylor (O), 1729 Spruce street. Wm. N. Thompson (C), 1529 Filbert street. Interior alterations, tile work, 3 bath rooms, shed on rear, 1 story, 10x8 feet, tin roof.

Church, Monmouth and Kensington avenue, \$1,200. Simpson M. E. Church (O), on premises. Barnes Bros. (C), 2080 East Willard street. Interior alterations.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 12, 1917.—Sealed proposals will be opened in this office at 3 P. M., June 21, 1917, for the construction complete of the United States post office at Cambridge, Md. Drawings and specifications may be obtained from the custodian of site at Cambridge, Md., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 9, 1917.—Sealed proposals will be opened in this office at 3 P. M. June 18, 1917, for the construction complete of the United States post office at Akron, Ohio. Drawings and specifications may be obtained from the custodian of site at Akron, Ohio, or at this office, in the discretion of the Acting Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 3, 1917.—Sealed proposals will be opened in this office at 3 p. m., June 12, 1917, for the construction of the United States post office at State College, Pa. Drawings and specifications may be obtained from the custodian of the site at State College, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., April 30, 1917.—Sealed proposals will be opened in this office at 3 p. m., May 28, 1917, for changes in plumbing, gas piping, conduit and wiring and lighting fixtures, in the United States Post Office at Beaver Falls, Pa., in accordance with the specification and drawings, copies of which may be had at this office or at the office of the custodian, Beaver Falls, Pa., in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Alterations and Additions

Dwelling, 1905 North Howard street, \$300. M. C. Morgan (O), on premises. H. E. Miller (C), 2526 Coral street. Brick, 1 story rear addition, 12x12 feet, tin roof.

Store and Dwelling, 616 North Tenth street, \$700. G. Kirshner (O), on premises. Otto Malz & Son (C), 2108 North Lawrence street. New flush bulk.

Section House, 1,400 feet north of Martin's Mill Road, \$2,000. P. N. & N. Y. R. R. Co. (O and C), Twelfth and Market streets. Brick, 2 stories, 18x50 feet, pitched roof.

Dwellings, 5519-21-23-25 Lansdowne avenue, \$3,600. B. Isenberg (O), 4144 Leidy avenue. A. Mandelstan (C), 4144 Leidy avenue. Brick, 1 story, 16x15 feet.

Commission House, 314 South Front street, \$7,000. E. P. Stern (O), 308 South Front street. Henry C. Dahl (C), 231 South Eighth street. Brick, 2 stories, 15x52 feet, slag roof.

Distillery, Snyder avenue and Water street, \$6,000. Publicker Ward Distilling Co. (O), on premises. Joseph Levin Co. (C), 1530 South Sixth street. Brick, 2nd and 3rd story additions, 44x46 feet.

Factory, Mifflin and Delaware avenue, \$6,000. Crew Levick Co. (O), Land Title Building. Joseph Levin Co. (C), 1530 South Sixth street. Brick, 3rd story addition, 44x123 feet.

Apartments, 257-59 South Eleventh street, \$500. Theo. Philips (O), 902 South Forty-seventh street. Brownworth & Co. (C), 1611 Sansom street. Fire escapes.

Albatoir, Thirtieth and Race streets, \$6,000. West Philadelphia Stock Yards Co. (O), on premises. Barber Asphalt Co. (C), Thirtieth and Race streets. Removing present asphalt floor and replacing same with reinforced concrete.

Factory, 1225 Arch street, \$850. J. H. Dripps (O), Morris Building. Harry H. Wehmeyer (C), 1004 Lehigh avenue. Interior alterations.

Store and Dwelling 2319 Ridge avenue,

\$1,250. Joseph Feldman (O), Lincoln Building. Aaron Ribner (C), 2159 Ridge avenue. New flush bulk, change stairway.

Store, 923 Vine street, \$1,340. Commonwealth Trust Co. (O), 1201 Chestnut street. Lam Building Co. (C), 1001 Wood street. Fire repairs.

Office, Twenty-first and Somerset streets, \$400. Frank Mark (O and C), 2820 North Twenty-first street. Interior alterations.

Dye House, Amber and Allegheny avenue, \$4,000. General Processing Co. (O), Collins and Willard street. H. E. Baton (C), Twelfth and Sansom streets. Fire damage, rear addition, 1 story, 91x28 feet, concrete foundations and brick walls.

Dwelling, 1207 East Washington Lane, \$900. George P. Taylor (O and C), on premises. Stone, 2 stories addition 38x15 feet, slag roof.

Dwelling, Bartram avenue and Eighty-fifth street, \$325. T. Slidy (O), on premises. John Scholtz (C), Eighty-fifth and Tinicum avenue. Brick, 1 story, 14x16 feet.

Offices, 434 Walnut street, \$2,000. Stokes-Packard-Haughton-Smith (O), on premises. J. M. Daniels (C), 252 South Juniper street. Plastering and iron cornices at bulk, alterations.

Store, 806 Birch street, \$800. Dannenbaum Sons & Co. (O), on premises. Harry R. Rust (C), 19 South Eighth street. New toilets and alteration to bulk window.

Store and Dwelling, 204 North Second street, \$800. John Livzey (O), Allan's Lane. Wm. F. Ingham (C), 237 North Clarion street. New bulk windows.

Store and Dwelling, Fifteenth and Arch streets, \$1,300. Wm. C. Schank (O), on premises. J. Willen (C), 1710 Emory avenue. New bulk interior alterations.

Store and Dwelling, 2304 West Columbia avenue, \$800. F. Patchett (O), on premises. F. J. Wintz (C), 1618 North Twenty-seventh street. New flush bulk windows, interior alterations.

As The Editor Sees It

LAST week's GUIDE contained, among other things, a news local, headed "Builders Oppose Work Limitation," reporting the views of the Philadelphia Master Builders' Exchange in opposing Senate Bill 744 providing for the licensing of architects.

I am in receipt, from Mr. M. I. Kast, president of the Southern Pennsylvania Chapter of the American Institute of Architects, of the appended communication with reference to the bill in question and the stand of the builders in relation thereto.

President Kast writes me:

"In the matter of an article in your issue of May 16, under the title of 'Builders Oppose Work Limitation,' I beg to advise you, as a member of the committee which prepared the Act for the licensing of Architects, that the objections raised to Senate Bill No. 744 can not be valid objections from the builders' standpoint.

"There has been no intention, at any time, to restrict a builder, or an engineer, from making plans for a building. The thought is entirely, as the Act is drawn, and with some slight revisions, to prohibit any one from using the title of 'Architect' who is not qualified to do so.

"There is no annual examination and all architects who are practicing at the time of the passage of the Act, would be licensed without examination. All new men, coming in afterwards, would

either have to have a qualified standing, or pass an examination, as may be prescribed by the Board of Examiners of Architects.

"I ask that you give this information to the builders as well as to the public.

"The intention of the Act is solely to define the title 'architect' so that all who practice under it may be qualified to do so.

"Yours very truly,
(Signed) "M. I. KAST."

* * *

REINHART DEMPWOLF, of York, Pa., is vice-president of the Southern Pennsylvania Chapter; Edward Leber, of York, secretary, and W. B. Billmeyer, also of York, treasurer. President Kast is a Harrisburg man and a widely known and prominent practicing architect.

I beg to refer Mr. Kast's letter to the consideration of President Tyson and his colleagues of the Philadelphia Master Builders' Exchange. Judging by the tone of Mr. Kast's letter, there should be little difficulty experienced by the Exchange committee in arranging such differences of opinion as may exist between the builders and the architects in the matter of this bill.

* * *

I AM indebted to the courtesy of Mr. Kast for an official copy of House Bill No. 1323, which will be reprinted in the next number of THE GUIDE.

In regard to this bill Mr. Kast writes:

"I enclose Act No. 1323 which appears to me to be of such a character as should enlist the opposition of the builders' organization. It is sent you simply for information to use your pleasure with it as it may appeal to you."

* * *

HOUSE Bill 1323 is a typical job-creating sample of political legislating. It is designed to apply only to third class cities, boroughs and townships. Among the fat salaried jobs it proposes to create in mandatory fashion are these:

A Chief Inspector at \$4,000 a year.

Assistants to the Chief Inspector—no limit as to the number of these,—at \$3,000 a year.

As many associate inspectors as may be necessary,—no limit as to the number of these,—at \$10 per day and traveling expenses.

An examining and advisory committee to consist of the Commissioner of Labor and Industry, the Chief of the Bureau of Inspection of Buildings, the State Fire Marshal and four additional members to be appointed at salaries of \$10 per day and traveling expenses.

And a secretary for this committee whose salary shall be appointed and fixed by the Commissioner of Labor and Industry.

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

IN addition to which nice, little bunch of desirable political berths, the Act provides that there "shall" be created in every city of the third class in this Commonwealth, by ordinance, a local division of building inspection to be organized as follows:

A local Chief Inspector with "such assistant inspectors, clerks and others" as may be necessary at salaries to be fixed by the authorities."

Up to this point the Act is mandatory. It next provides that there "may" be created, in boroughs and townships, bodies of the same general character "at salaries to be fixed and paid by the borough and township boards."

Every body so created, however, "shall be under the supervision of the Commissioner of Labor and Industry" and no inspector may be appointed who has not been "first qualified by examination before the advisory and examining committee" mentioned in a foregoing chapter.

* * *

WHERE a borough or township exhibits a disposition to evade the expense of a local bureau the commissioners of the county within which such recalcitrant boroughs or townships are located "shall" establish such divisions willy-nilly providing for their salaries out of the funds of the county affected.

The Commissioner of Labor and Industry is given authority under the Act to "make, alter, amend and repeal rules and regulations" to cause them to apply "to specific conditions" and to prescribe "means, methods and practices to carry into effect and enforce such provisions."

It is specifically provided that the Act shall not apply to "single, detached, private residences."

* * *

ACAREFUL reading of the provisions of the Act in detail will repay the average builder and architect who feels that he is over-regulated as things stand and is in no mood to view with complacency the saddling of new regulations—the chief aim and object of which is obviously to provide places for the hungry faithful.

* * *

WHEN is a factory not a factory and what is a corner lot and why?

A month or two back the building authorities of New York State were wrestling with the problem involved in deciding definitely just what might be regarded as a factory. After months of verbal quibbling that vexed question was defined to the satisfaction, at least of the authorities most directly concerned.

Last week Superintendent of Building Ludwig, of Manhattan Island, found

himself at some loss to decide just what is meant, for zoning restriction, by the term "a corner lot."

The question has been passed on to the Board of Appeals in an appeal of F. Burrall Hoffman, Jr., architect, in connection with a proposed new residence building for Surrogate Robert Ludlow Fowler, at 17 East 90th street. The lot, on which it is proposed to erect the buldng, backs up against a portion of the premises on which Andrew Carnegie's residence stands. The Carnegie plot, which contains two buildings but is mostly uncovered area, is at a corner and runs the full length of Fifth avenue

from 90th to 91st streets. The plot extends about 200 feet along 90th street and about 325 feet along 91st street, making the 91st street portion of the lot extend about 120 feet farther from Fifth avenue than the 90th street end.

The Building Zone Resolution does definitely specify what a corner lot is, but the Board of Appeals holds that a lot extending, as this one does, for so great a distance along the street cannot be deemed a corner lot within the meaning of the Building Zone Resolution.

And in this quiet and altogether orthodox fashion is resolved one more great and momentuous issue.

EDITORIAL NOTES

Louis Rush, architect, 130 South Fifteenth street, Philadelphia, has enlisted for service in the officers' reserve force now training at Fort Niagara. Current work of Mr. Rush's office will be handled by arrangement during his absence by Karcher & Smith, 34 South Seventeenth street.

* * *

Arthur B. Gill, architect, formerly of Sheen & Gill, of Philadelphia, has associated himself in practice with Custer & Seltzer, of Camden, N. J.

* * *

Among architects who have joined the Officers' Reserve forces training at Fort Niagara are Edwin M. Voorhees, of the Hale Building, Philadelphia, and Fred A. Muhlenberg, of Reading, Pa.

* * *

Arthur A. Heilman has opened an office at 612 Washington street, Reading, Pa., for the practice of architecture and announces that he will be pleased to receive manufacturers' samples, catalogues, etc.

* * *

For some time past the authorities in Chicago have been considering a by-law which will require all sheet metal contractors within the city to be licensed. The associations have been active in this matter and have appointed a committee to safeguard their interests. These committees will work with the end in view of having inserted in the license ordinance, clauses which will make for better conditions in the trade both from the contractors, and the customers' standpoint.

* * *

The sixth annual meeting of the Metal Branch of the National Hardware Association is to be held at the William Penn Hotel, Pittsburgh, Pa., on Friday and Saturday, June 1 and 2. With the increased activity this year and the interest aroused as a result of the advertising campaign of the Metal Club of Philadelphia, the meeting promises to be an interesting one.

W. F. Schaphorst, M. E., New York, advertising engineer and a contributor to the technical journals, has established an engineering advertising service, with offices in the Woolworth Building. He solicits business with manufacturers of high-grade engineering products.

* * *

Employers in the building trades in Cleveland whose operations were tied up for a month, first by strikes by union workers and then by lockouts declared by the contractors, have succeeded in winning an important victory for the observance of written arbitration agreements. By the terms of the settlement, disputes between workmen and the employers are first to be submitted to a committee of workmen and employers in the respective trades. Appeal may be made to a conciliation board composed of seven members of the union's council and seven members of the association, and there is to be no strike or lockout until this board has had ample time to arrive at a settlement. The agreement also contains provisions that there shall be no limitation as to the amount of work a man shall perform in a day, no restriction in delivery or use of material, except prison-made material; no restriction in the use of apprentices, and gives the employers the right to employ or discharge whoever they see fit. There was formerly an agreement between the employers and workmen in Cleveland which the Building Trades Council (union) voted to ignore, precipitating the tie-up.

* * *

No radical conditions confront us as a result of the declaration of war. There is every indication that with the floating of the new loans business activity will soar to even greater heights than have characterized the remarkable business expansion of recent months. There is every reason for optimism regarding the future of American trade. The most unfortunate thing that could possibly happen would be a period of business depres-

sion. The message of the day to the buying public is: "Be rational."—Ex.

* * *

Braemer Air Conditioning Corporation, Philadelphia, Pa., has published a circular announcing its organization. Most of the district managers, who cover the cities of Cincinnati, St. Louis, Kansas City, Indianapolis and Cleveland, have for many years represented the air conditioning department of Warren Webster & Co. The circular contains photographs of the officers, including William G. R. Braemer, president; Herbert Coward, treasurer, and H. A. Terrell, secretary. A New York office has been opened at 90 West street, with G. P. Uppington as district manager. Mr. Uppington is a graduate engineer, with eleven years' practical experience in heating, ventilating, air conditioning and sales work.

* * *

A bill has been introduced into the Senate to amend the Federal Reserve Act permitting the reinstatement of check collection charges. It will be remembered that the charge for collections on out-of-town checks was materially reduced with the enactment of the Federal Reserve bill. It is felt that the banking interests are now endeavoring to reinstate the old schedule which is more expensive to the depositor. It is suggested that a protest be filed by all those interested with their United States Senators. T. James Fernley, secretary-treasurer of the National Hardware Association of the United States, has recently sent a communication to all members requesting them to voice their protests against this amendment.

* * *

A precipitate and uncalled for check of the normal flow of money into the various customary channels, will cause an economic upheaval that will directly demoralize every unit in the great economic structure upon whose stability the very existence of the nation depends. The strength of each unit in this complex machine depends upon the maintenance of normal conditions and the unchanged status of each allied unit. The weakening of a single link affects adversely the entire chain.—Ex.

* * *

It is absolutely imperative at this time that industry of all kinds maintain its normal and steady course. This end is to be urgently sought, not only for the proper protection of American capital and labor, but also because the war levies will impose additional obligations upon citizenship, and no new situations must be created which will weaken their productive capacity.

* * *

Lawson Purdy, in an address made at Asbury Park, urged the adoption of a zoning law similar to the one now in force in New York City. A large section of the well-known pleasure place was recently destroyed by fire, and the city has an opportunity of rebuilding it along logical and orderly lines, incorporating in the new development, the most modern details of municipal planning. Commissioner Purdy urged especially the creation of a bar-

red zone for public garages, as a proper protection of property rights.

* * *

The building material market has held its own to a surprising degree in the existing crisis. Prices of practically all of the important commodities are holding firmly at the levels that have maintained for a long period. In some particular instances upward revisions have been announced and there is generally a feeling that within a short time the present conditions will be improved and that there will be a resumption of prosperity for the building industry.

* * *

One of the factors that has helped considerably in sustaining the hopes of the structural trades is the large amount of Government construction in immediate prospect. Some of this work has already been placed under contract and activities started and the balance is likely to be commenced at an early date. According to the present schedule there is almost enough of this type of work in sight to keep the trade active for some months, and it is this influence that will maintain life and interest in the building industry and material market until the general building situation is improved and activity resumed on a scale that will enable the industry to prosper.

* * *

The announcement in the forepart of this week that the Federal Government had requisitioned the total output of the steel mills of the country for the construction of an immense merchant fleet and a further statement that the lumber output and many other building commodities was likely to be commandeered in a similar manner has had a strong tendency to influence prospective builders to hold off for a more propitious time. As a matter of fact, the announcement was without stable foundation, and although it appears as though the Government would require a large percentage of the available materials for the fulfillment of its schedule, there is certain to be an adequate supply obtainable for general building purposes. Under the circumstances the building trades must not lose heart, but rather should endeavor to influence prospective builders to proceed with the contemplated operations that are so necessary to maintain the industry at its former state of efficiency.

* * *

The City of New York, Borough of Queens, is having plans prepared by the J. P. Powers Company, Boulevard, Rockaway Beach, L. I., for an incinerator plant to be built in New street, Arverne, L. I., at an estimated cost of \$100,000. The building will be of brick and reinforced concrete construction and will measure 57x38 feet. It will be two stories in height.

* * *

The tower and cupola of New York's City Hall, which was damaged by fire, will be rebuilt from plans by Grosvenor Atterbury, 26 West Forty-third street, that city, the architect who designed the decorative effects on the building and in City Hall park in honor of the visiting Commissioners. The estimated loss has been placed at \$25,000. This is the

second time that the City Hall tower has been damaged by fire. During the celebration attending the laying of the Atlantic cable in 1858, the fireworks set fire to the cupola. The new cupola was then built larger in order to put in the clock, which was destroyed recently.

* * *

W. Kerr Rainsford, architect, 665 Fifth avenue, New York, has joined the Plattsburgh contingent and will soon take up his duties there as a commissioned officer.

* * *

Edmund C. Stout, of East Orange, has been appointed architect engineer by the Prudential Insurance Company of Newark. Mr. Stout has for seventeen years been a member of the architectural firm of Hill & Stout.

* * *

B. H. Collins has joined the publicity staff of the Society for Electrical Development. Mr. Collins takes the place of Hill Griffith, first lieutenant, cavalry, Officers' Reserve Corps, who has been called into active service.

* * *

Unquestionably the building and allied trades have begun to experience the effects of war times, as have many other lines of industry. Structural activity has recently slowed down perceptibly, and while the trade as a unit is hopeful for the future there is an undercurrent of feeling evident that it will be some time before construction work is resumed on the scale that maintained a month or six weeks ago. Just previous to the declaration of war there was every indication that the building trades were destined to enjoy a most prosperous season, notwithstanding the fact that the high cost of structural materials and other important factors were exerting a tendency to hinder operations to no small degree. Since the advent of this country into the war, however, there has been a decided slump in practically all lines of construction, more particularly in the large cities, where steel is one of the most important materials. At the present writing there is but little active work in progress other than that absolutely necessary. The buildings now under construction and the majority of the new projects that are being planned are for the manufacturing and handling of munitions and war supplies, commercial operations and Government contracts for buildings and other forms of construction work called for by the preparedness program.

* * *

Just as happy as though they had all received a good big fat contract were the 200 members of the Master Builders' Exchange of Philadelphia, who were fortunate enough to be present at the annual outing and shad dinner of the Exchange, held on Thursday last at Kugler's "Old Mohican Club," on the Delaware. The midway, which rivaled that of the World's Fair, was a source of great amusement and carried many a master builder back to his boyhood days. The shad dinner, which is always a great function at the Mohican Club, was up to its standard of perfection and was enjoyed from beginning to end. The outing in every detail was a grand success and adds another one to the long list of red-letter events held by the Master Builders' Exchange.

Architect sub-letting all contracts.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete. But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder. "You'll find one of these Base-board Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

Store (alt. and add.), Front and Monroe streets, Wilmington, Del., \$5,000. Architects, Brown & Whiteside, Dupont Building, Wilmington, Del. Owners, F. Blumenthal Co., Wilmington, Del. General interior and exterior alterations. Contract awarded to Walter D. Thompson, Wilmington, Del.

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

No one suffers from a mean disposition like the fellow who has one.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Factory, Nixon and Fountain streets, \$75,000. Philadelphia Paper Manufacturing Co. (O), on premises. Barclay White Co. (C), 1713 Sansom street. Brick, 1 story, 170x273 feet, concrete floors.

Stack, Thirty-first and Jefferson streets, \$1,000. F. A. Poth & Son (O and C), on premises. Steel stack, 15 feet high.

Laundry, Eleventh and Mifflin streets, \$500. Manchester Laundry (O), Eleventh and Mifflin streets. E. Keller Co. (C), 1518 Real Estate Trust Co. Boiler and foundation and setting.

Storage, 1109 Locust street, \$500. Charles Bancroft (O), on premises. Wm. R. Dougherty (C), 1610 Sansom street. Interior alterations.

Store and Dwelling, 722 North Franklin street, \$375. A. Goldner (O), on premises. Nathan Parker (C), 1618 Walter street. Brick, 1 story rear addition, 11x25 feet, slag roof.

Store, Broad and Susquehanna avenue, \$36,000. J. B. Gillies (O), on premises. B. Bornstein (C), 1510 North Franklin street. Brick, 2 story addition, 178x89 feet.

Dwelling, Seventeenth and Spruce streets, \$3,000. Dr. Deaver (O), on premises. H. H. Burrell (C), 206 South Quince street. Brick, 3 story rear addition, 8x14 feet.

Dwelling, 3102 G street, \$1,000. S. Celani (O), 3107 Kensington avenue. J. F. Crowl (C), 3127 Belgrade street. New flush bulk.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—“Municipal Engineering.”

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

The business man who grudges a commission to an advertising agent who thinks “he can do it himself” is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

SURE.

Stick to your work, forget the mob,

Avoid the discontented throng;

For, if you're always on the job

Success is sure to come along.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for “Proposal” advertising. “The Builders’ Guide” is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 12, 1917.—Sealed proposals will be opened in this office at 3 P. M., June 21, 1917, for the construction complete of the United States post office at Cambridge, Md. Drawings and specifications may be obtained from the custodian of site at Cambridge, Md., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 9, 1917.—Sealed proposals will be opened in this office at 3 P. M., June 18, 1917, for the construction complete of the United States post office at Akron, Ohio. Drawings and specifications may be obtained from the custodian of site at Akron, Ohio, or at this office, in the discretion of the Acting Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 17, 1917.—Sealed proposals will be opened at this office at 3 P. M., June 20, 1917, for the construction of the United States post office at Front Royal, Va. Drawings and specifications may be obtained from the custodian of the site at Front Royal, Va., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 17, 1917.—Sealed proposals will be opened at this office at 3 P. M., June 26, 1917, for the construction of the United States post office at Monessen, Pa. Drawings and specifications may be obtained from the custodian of the site at Monessen, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

As The Editor Sees It

PHILADELPHIANS owe a debt of gratitude to Mayor Thomas B. Smith for the promptness with which that official squelched the movement instituted to do away with the Art Jury. For some time past there has been a systematic effort on the part of persons opposed to the growing influence of aesthetic considerations in public building to resist the supervision exercised by the Art Jury. The argument of this element has been that the restrictions as to design, harmony with immediate environment and proportions, imposed by the supervisory tribunal, add to the cost of public structures without compensating benefits.

As a matter of fact, the work of the Art Jury has been in the highest degree advantageous from every angle. As Justice Von Moschzisker pointed out in the address delivered by him before the recent Municipal Art Conference the Art Jury is doing, with most commendable intelligence, a work of paramount importance to the city's future development. To install a scheme of comprehensive city planning, involving the expenditure upon a parkway system of millions of dollars, and permit the desecration of such parkways with buildings architecturally hideous, and out of key with the general plan, would be to return to the folly that it is the fixed and definite purpose of city planning to correct.

Fortunately, Mayor Smith is an ex-

ecutive of vision and understanding. When the proposition to do away with the Art Jury reached the ears of that alert and capable official it very promptly received its quietus. Mayor Smith caused it to be known, in terms too emphatic to be misunderstood, that he regarded the work of the Art Jury of commanding importance to a balanced and scientific development of the much desired City Beautiful.

The Mayor's indorsement ends for some time to come all possibility of helter-skelter designing on the city's new and splendid boulevards. It is none the less a trifle discouraging to reflect that, after all that has been said and written upon the subject of expert city planning, there should still remain citizens who can view with composure, if not approve, a letting down of the bars to the type of planning that in other years has made us the butt of more progressive municipalities.

* * *

THE Master Builders' Exchange of Philadelphia is advocating the passage of House Bill 1639, now pending in the Pennsylvania Legislature.

The bill approved requires that no contract may be awarded by a Board of Education anywhere in this State for any work on public schools amounting to \$300 or upward without due advertisement, and that all such contracts must be let to the lowest responsible bidder.

This is the procedure now in Philadelphia, but it is said that the contrary condition prevails in Pittsburgh and elsewhere, many contracts being let, without any advertisement or competition whatever, to favored builders.

* * *

ONE of the greatest civic problems of the day, particularly in the older and larger municipalities of the East, is what to do with the old-fashioned convenience-less dwellings built twenty-five or thirty years ago. They are difficult to rent and harder to sell, except at a price which few owners of real estate can afford to accept.

Philadelphia's development has been particularly trying to those who own real estate in the old residence quarter. The development of West Philadelphia and other outlying sections following the extension of the electric surface and elevated railway systems resulted in a tremendous shifting of the population to the newer sections of the city, where small houses equipped with all modern conveniences could be purchased or rented at prices within the reach of those with the most modest incomes.

What is going to become of more than 100,000 dwellings located in a perfectly good residential section of this city, reasonably well built, with adequate transit facilities and other city conveniences, but whose selling values and rental returns have during the past ten years been distressingly reduced? asks

* * *

IN the great majority of cases the fault for the condition complained of rests with the owner. Owners of real estate in the older residential sections of the city have shown a disposition, in other years, to deal with the average tenant as if that hapless victim of circumstances was in some measure compelled to tolerate him. They have not only refused to keep step with the march of progress by installing modern conveniences of living, but in many, very many, cases they have declined to make even necessary repairs. This, too, in the face of the fact that, in not a few instances, they were in receipt of rentals such as netted a percentage on the original investment far above the normal earning capacity of houses of the kind. How to remedy the condition now complained of is a problem. If the neighborhood has not undergone such a general deterioration as would render it distasteful to the right class of tenants the solution would seem to be—renovation.

The expense of electric wiring is not prohibitive, modern plumbing is not necessarily expensive, and good, attractive paint and wall paper cost much less than most folks seem to imagine. Old front doors of the unattractive type may be displaced by showy, hardwood doors at comparatively small expense and back yards, front sidewalks and cellars of cement are an investment worth every penny they cost. Modern heaters and good combination ranges may cost a trifle more than the common variety, but they pay in the end because they hold good tenants.

I know one owner who had a block of dwellings in a down-town section not particularly desirable. The lots were extra deep and the houses contained four good-sized rooms on the first floor. After pondering the question for some time he installed serviceable heaters and ranges, cemented the back yards so as to leave attractive grass plots, put stationary laundry tubs in the out-kitchens and by moving his walls back ten feet on the first floor added an attractive porch to each house. Before these improvements were made he had trouble in keeping tenants in these houses at \$18 a month. After completing the improvements he experienced no difficulty about getting a good grade of tenants at a rental of \$25 a month. And being wise in his day and generation, which means that he keeps them painted and in good repair, he has had no trouble at all in holding his tenants. In fact, when I talked with him recently he showed me a waiting list of ten very desirable wage-earners in the section who asked to be given a chance to rent the first one

of these houses that happened to become vacant.

* * *

WHAT is to be done with houses in the deteriorated sections is a much more serious problem. The best plan, if the owner has the necessary capital, is to convert them into model tenements—by which I mean tenements so constructed as to comply fully with the requirements of the housing regulations. Some owners who have done this claim the investment has proved worth while. There is always a solution if the owner cares to go at his problem in the right way. It is seldom that any two of the conditions presented by property of the class under consideration are alike. Some years ago, I recall, four fine big dwellings in an Italian section remained unsold for over a year although offered at a most attractive figure. On the advice of an Italian agent the owner provided each of the four houses with a good big roomy front cellar entrance. Within a month all four houses sold to Italians at a slight advance on the original asking. The Italian agent figured on the liking of his countrymen for home-made wine and on their insistence upon a broad cellar entrance through which to convey the barrels, wine-press, grape and other staples necessary to its making.

* * *

CASES of the kind may be multiplied without limit. Not long ago, a real estate man was dickering for the sale to a small manufacturing tailor, of a four story dwelling in the Ghetto section. His client remained painfully apathetic until the real estate man made the proposition that if the deal was closed he would tear out partitions on the top floor and add to the advantages of the property a splendid tailor's work-room. The buyer became interested on the jump and the deal was closed without further difficulty.

The remedy for idle realty is renovation. Study the neighborhood. Study the proposition. Figure out in your own mind what the property lacks to make it attractive. Once you have spotted that, the rest is easy. There are exceptions, of course, but exceptions still prove the rule.

* * *

SELLING real estate is a game that not infrequently makes a demand upon what newspaper men call "the news instinct." Witness the following. There was placed for sale, in the hands of a broker here in town, a candy factory with all of its machinery and equipment intact. Some weeks after this white elephant had found a place on his books, he noticed, in passing a Chestnut street bulletin board, an item to the effect that a big cocoa factory in New York State had been ut-

terly destroyed by fire. Having the news instinct he at once dictated a letter to the head of the burnt-out concern, placing before him the opportunity to to secure a plant with machinery and equipment complete at a bargain figure. The letter brought a prompt reply asking for full particulars. There was an inspection of the property in due course, the usual dickering and within less than a month a \$125,000 deal was closed. And still I know men in the real estate game who attribute that particular sale to "luck." If ingrained salesmanship and mental alertness spells luck I'll concur.

* * *

THE Portland Cement Association suggests that there is no good reason for writing "portland cement" with a capital "P," since the product is not made in Portland, Me., Portland, Ore., nor Portland, England. The association recommends this practice to members in the following paragraph:

The emphasis resulting from the capitalization of the letter "P" contributes to the erroneous impression so prevalent that Portland cement is all made by a single corporation—hence such frequent expressions as, "Oh, yes! you are with the Portland people," or "What is the address of the Portland Cement Company?" The word "Portland" is properly to be considered as a qualifying adjective used to distinguish a kind of cement, not a brand of cement or a trade-mark. The case is quite similar to that of "macadam roads," where the word "macadam" has become a common adjective, though derived from MacAdam, the name of the man who invented this type of road. It is believed that departing from the custom of capitalizing the word "portland" will do much to correct the present troublesome misconception.

* * *

PLANS are well advanced for the construction of the cantonments to shelter the emergency army of the United States of 43,000 officers and 1,034,000 enlisted men. The estimated cost of providing temporary construction, etc., is \$75,650,000. The item for erection of temporary buildings amounts to \$40,290,800. Temporary hospitals are to be built to cost \$2,014,540; water and sewer systems will cost \$2,490,000; electric lighting systems, \$604,000; roads, \$5,036,000. The location and size of these camps have not been determined, and it is still a question whether the War Department will purchase the material and engage general construction companies to erect the buildings or award contracts for the complete work. It is planned to erect at Fort Myer, Va., a series of sample buildings arranged in

units of various types of construction, and the departmental designation of a type will be governed, not only by price and availability of material, but by considerations of climate. One of the types will be of metal, another of concrete (which includes the roof), and a third of frame (of the "knock-down" variety). The buildings will be of one

story and of the simplest design. The "layouts" will be for brigade headquarters, a regiment, a battalion, and a company. The officers' quarters for a regiment, for example, will be 84 feet in length and contain at one end the kitchen and mess room with offices at the other; between will be separate sleeping rooms for six officers.

* * *

The indications are that another **Marcus Hook** is to be built in the vicinity of the big steel plant of the **Worth Brothers'** building now along the Delaware River a short distance below the old fishing village that has become such a factor in the industrial world. This new community is to be known as **Worth City**, and although work is only well started on

the building of the plant that is to employ thousands of skilled and unskilled workmen, there is already a demand for building sites, and it is predicted by those who profess to know that there will be a tremendous increase in property values in that section within the next year or so.

* * *

Lansdowne, Pa., Delaware County, will sell on June 5 \$25,000 4 per cent. tax-free coupon road bonds, voted April 24 last.

* * *

Some of **Herbert C. Hoover's** ideas have value even beyond the important task of food administration. His opinion that results are better obtained by co-operation than by coercion represents first-class economics.—*Washington Star*.

* * *

More than 100 Pennsylvanians will be deprived of money aggregating \$300,000 by the ruling of the United States Supreme Court that employees engaged in interstate commerce may not collect compensation for injuries received while on duty. The only recourse such persons now have is to bring suit against their employers in the Federal courts, and that makes it necessary for them to prove negligence on the part of the employer. In most cases this is virtually an impossibility.

* * *

Relief work is under way and \$50,00 subscribed for immediate aid to sufferers from Atlanta's \$3,500,000 fire. Plans were made to begin rebuilding the burned section through northeastern Atlanta within a week. The flames destroyed 1,563 buildings, according to calculations of real estate and insurance men. Most of the structures were single residences, but several apartment houses, churches and retail stores were burned.

* * *

Major General George W. Goethals has become president of a new firm of construction engineers, as a result of a consolidation of the two firms hitherto known as **George W. Goethals**, 43 Exchange Place, and **Jamieson, Houston & Graham**, 40 Wall street. The new firm will be known as **Goethals, Jamieson, Houston & Jay, Inc.**, which will maintain the offices at 40 Wall street. Other officers will be: **R. E. Graham**, vice-president; **Major Charles C. Jamieson**, **George H. Huston**, **John C. Jay, Jr.**, and **George M. Wells**, directors.

What is said to be the tallest chimney in the world is in Japan and has recently been completed by the **Weber Chimney Company**, Chicago. The chimney is 510 feet high, 42.8 feet in diameter at the bottom and 27.5 feet at the top. The chimney stands on an elevation about 400 feet above the smelter which it serves and to which it is connected by a reinforced concrete flue built partially in the ground. The foundation is a truncated cone 17 feet high, 95 feet in diameter at the base and 42 feet at the top, and contains 2,711 cubic yards of concrete. Steel to the amount of 500 tons was used. The chimney is designed to be earthquake proof.

* * *

Immediately following the declaration of war a period of retrenchment set in, inspired by fear and doubt as to what the future would bring forth. This temporary depression was only natural, but it has been realized that general prosperity will sweep over the country should the "Business as Usual" campaign already started be generally adopted. Past experience has proven that expansion of trade always exists during war times and that the countries affected profit through the free circulation of money. Wages are increased, the number of unemployed minimized, demand for materials stimulated; in fact, every condition is present which would point toward prosperity.

* * *

One of the recent influences that has substantially assisted in raising the hopes of the building industry is the great mass of Government construction that has lately been announced and that still is in prospect. During the past week there were contracts placed for important work of this character and the effect upon the building industry has been galvanic. The War Department is perfecting its plans for the expenditure of millions of dollars in the construction and equipment of training camps and the improvement of fortifications and army posts for the accommodation of the contemplated expansion of the military forces. The structural trades will share in a large manner in this expenditure, and while the profits returned from work of this type are smaller than those obtained through private construction, the activity is welcome, indeed, as it keeps the organizations of the contractors intact until such time as there is a general resumption of private building on a large scale.

* * *

The large war loan is really not a loan, but rather the extension of credit to our allies. The billions of dollars will not be sent out of the country, but will be freed for the transaction of business and circulated among all classes. The country has been enriched through the obtaining of a very large customer, Uncle Sam. He is in the market to buy extensively and has already contracted to expend millions of dollars. These contracts will rebound to the advantage of the country at large. Pessimism must be guarded against and the slogan "Business as Usual" adopted and practiced.

HOUSE BILL No. 1323

An Act That Essays to Provide Local Building Inspection in Every Third Class City, Borough and Township of Pennsylvania, Under the Control and Supervision of the Commissioners of Labor and Industry at Harrisburg—Power Vested in a Central Advisory Committee to Fix Salaries and Make Regulations.

House Bill No. 1323, introduced by Mr. Palmer, of Pottsville, and referred to the Committee on Manufacturers of the Pennsylvania House of Representatives, has for its object the establishing of local bureaus of building inspection, under State supervision, in every third class city, borough and township in Pennsylvania.

The Act follows:

AN ACT

Creating a Division of Building Inspection within the Department of Labor and Industry and Divisions of Building Inspection in the third class cities and providing for the creation of such divisions in certain of the counties, boroughs and townships of the Commonwealth of Pennsylvania; providing for the promulgation of rules and regulations by the Industrial Board to effectuate the purposes of this act; establishing an examining and advisory committee within the Division of Building Inspection; providing for the appointment of officers and employees for the enforcement of the provisions of this act; defining the authority and powers of said Division of Building Inspection and Examining and Advisory Committee and the duties and powers of their officers and employees; providing penalties for the violation of the provisions of this Act and of the aforesaid rules and regulations of the Industrial Board, and repealing all acts or parts of acts inconsistent with this Act; provided, however, that no acts or parts of acts relating to cities of the first and second class are hereby repealed.

Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same. That there is hereby created and established a Division of Building Inspection in the Department of Labor and Industry.

There shall be a chief of said Division of Building Inspection appointed by the Commissioner of Labor and Industry, with the approval of the Governor, who may be the civil engineer of the Department of Labor and Industry. He SHALL be provided with a consulting associate or associates to be designated by the Commissioner of Labor and Industry, together with such assistants and clerical force as may be necessary for the effective administration of the division. The salary of the chief of the Division of Buildings shall be four thousand (4,000) dollars per annum; the compensation of such associate or associates as the Commissioner of Labor and In-

dustrial Board shall deem necessary for the proper administration of said Division of Buildings shall not exceed ten (\$10,000) dollars per day for each period of employment, together with traveling expenses actually or necessarily incurred in the performance of their duty and the salary of the assistants to the chief of the Division of Buildings shall be not more than three thousand (\$3,000) dollars per annum for each such assistant.

There is hereby created in such Division of Buildings an examining and advisory committee to consist of the commissioner and the chief of the Bureau of Inspection of the Department of Labor and Industry and the State Fire Marshal and four additional members to be appointed by the Commissioner of Labor and Industry after consultation with the Industrial Board and with the approval of the Governor, one of whom shall be a representative of the third class cities of the Commonwealth, one a representative of the counties of the Commonwealth, one a representative of the boroughs of the Commonwealth and one a representative of the townships of the Commonwealth. The last four members of the examining and advisory committee shall be men of known experience and capacity in building construction who shall also have served an apprenticeship in a building trade or have completed an acceptable course in architecture or building construction. The Commissioner of Labor and Industry shall be chairman of the said committee, but in his absence the chief of the Bureau of Inspection shall be the chairman of such examining committee and the Commissioner of Labor and Industry shall appoint and fix the salary of a secretary for said committee and all of said committee, with the exception of the chairman, shall receive the compensation of ten (\$10.00) dollars per day for each day of service actually rendered to such committee, together with traveling and other expenses actually or necessarily incurred. Vacancies in said committee shall be filled by the Commissioner of Labor and Industry after consultation with the Industrial Board and with the approval of the Governor.

Such examining and advisory committee shall be the judge of the qualification of applicants for the position of building inspectors or assistant building inspectors of any of the divisions of inspection provided by this Act, and no person who has failed to pass the examination before such committee shall be appointed to the position of such building or assistant building inspector in this Commonwealth; provided, however, that nothing in this provision shall apply to cities of the first

and second class. The Commissioner of Labor and Industry shall make required appointments from those persons who have successfully passed the tests of said examining committee except in the case of local officials the appointment of whom is hereafter provided for, and shall appoint all clerks and other executive or clerical force required to make this act effective. The committee shall hold its examinations at such intervals and at such places in the Commonwealth as the committee shall deem necessary. Notice of the time and place of its examinations shall be given by the committee at least fifteen days prior to the holding of such examination.

Section 2. There shall be created in every city of the third class in this Commonwealth, by ordinance of the Councils of such cities, a division of building inspection, which is hereby charged under the supervision of the Division of Building Inspection of the Department of Labor and Industry with the local administration of this Act. The head of said division shall be a building inspector appointed by said city after he shall have duly qualified for the position by passing an examination before the examining and advisory committee of the Division of Buildings of the Department of Labor and Industry. The ordinance of Councils creating such division shall provide for such assistant building inspectors, clerks and others as may be necessary to effectuate the purposes of this section and shall provide for the amount of their salary or compensation and for the payment of the same out of the treasury of said city.

Section 3. There may be created in any borough of this Commonwealth by ordinance of the Councils of such borough a Division of Building Inspection charged, under the supervision of the Division of Building Inspection of the Department of Labor and Industry, with the local administration of this Act. The head of said division shall be a building inspector appointed by said borough after he shall duly qualify for the position by passing an examination before the examining and advisory committee of the Division of building Inspection of the Department of Labor and Industry. The borough ordinances creating such division shall provide for such assistant building inspectors, clerks and others as may be necessary to effectuate the purposes of this section and shall provide for the amount of their salary or compensation and for the payment of the same out of the treasury of the said borough.

There may be created by two or more boroughs combining for this purpose a joint Divi-

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete. But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder. "You'll find one of these Base-board Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

The "Builders' Guide" is the OLDEST, and the ONLY Architectural Publication in Pennsylvania.

committee of the Division of Building Inspection of the Department of Labor and Industry. The County Commissioners creating such Division of Building Inspection shall provide for such assistant building inspectors, clerks and others as may be necessary for the purpose and shall provide for the amount of their salary or compensation and for the payment of the same out of the treasury of the said county.

Section 7. All buildings and structures in this Commonwealth in which people are employed, reside or assemble or shall hereafter be employed, reside or assemble, excepting cities of the first and second class, shall be so constructed, equipped and arranged, operated and conducted in all respects as to provide reasonable and adequate protection for the life and safety of all persons employed in or occupying them; provided, however, that nothing in this section applies to single detached private residences. For the carrying into effect of this provision, the enforcement of which is hereby entrusted to and imposed upon the Commissioner of Department Labor and Industry, the Industrial Board shall have power to make, alter, amend and repeal rules and regulations necessary for applying such provision to specific conditions and to prescribe means, methods and practices to carry into effect and enforce such provision.

Section 8. The rules and regulations of the Industrial Board and the amendments and alterations thereof shall be distributed to all applicants. Every rule or regulation adopted by the board shall be published in bulletins of the Department of Labor and Industry, and in such daily newspapers as the board may prescribe, and no such rule or regulation shall take effect until thirty days after such publication. Any employer, employee, occupant, owner or other person interested, either because of ownership in or occupation of any property affected by any such order or regulation or otherwise may petition for a hearing on the reasonableness of a rule or regulation. Such petition for hearing shall be by verified petition filed with the said Industrial Board setting out specifically and in full detail the rule or regulation upon which a hearing is desired and the reasons why such rule or regulation is deemed to be unreasonable. All hearings of the board shall be open to the public. Upon receipt of such petition, if the issues raised in such petition have theretofore been adequately considered, the Industrial Board shall determine the same by confirming without hearing its previous determination, or if such hearing is necessary to determine the issue raised the Industrial Board shall order a hearing thereon and consider and determine the matter or matters in question at such time as shall be prescribed. Notice of the time and place of such hearing shall be given to the petitioner and to such other persons as the industrial board may find directly interested in such decision.

HOUSE BILL NO. 1323.

(Continued from Page 352.)

sion of Building Inspection charged, under the supervision of the Division of Building Inspection of the Department of Labor and Industry with the local administration of this Act. The head of said joint division shall be a building inspector appointed by said boroughs after he shall have duly qualified for the position by passing an examination before the examining and advisory committee of the Division of Building Inspection of the Department of Labor and Industry. The borough ordinances creating such joint division shall provide for such assistant building inspectors, clerks and others as may be necessary to the purpose and shall provide for the amount of their salary or compensation and for the ratable payment of the same out of the treasuries of the said boroughs.

Section 4. There may be created in any township of this Commonwealth by the proper authorities of the said township a Division of Building Inspection charged, under the supervision of the Division of Building Inspection of the Department of Labor and Industry with the local administration of this Act. The head of such division shall be a building inspector appointed by said township after he shall have duly qualified for the position by passing an examination before the examining and advisory committee of the Division of Buildings of the Department of Labor and Industry. The township shall provide for the amount of such inspector's salary or compensation and for the payment of the same out of the treasury of the said township.

There may be created by two or more townships combining for this purpose a joint Division of Building Inspection charged, under the supervision of the Division of Building In-

spection of the Department of Labor and Industry, with the local administration of this Act. The head of said joint division shall be a building inspector appointed by the said townships after he shall have duly qualified for the position by passing an examination before the examining and advisory committee of the Division of Building Inspection of the Department of Labor and Industry. The townships creating such joint divisions shall provide for the amount of such inspector's salary or compensation and for the payment of the same out of the treasuries of the said townships.

Section 5. There may be created by a combination of a borough with a township or a combination of boroughs with townships, a joint Division of Building Inspection which shall be administered and maintained in the manner hereinbefore provided in the case of joint Divisions of Building Inspection.

Section 6. Where a borough or combination of boroughs or a township or combination of townships or a combination of boroughs and townships shall fail to create the Division of Building Inspection which it is the intent and purpose of this Act to establish therein, it shall be the duty of the County Commissioners of the county within which such subdivisions of the State are located, upon written notice from the Department of Labor and Industry to establish a Division of Building Inspection in said county which shall be charged, under the supervision of the Division of Building Inspection of the Department of Labor and Industry, with the local administration of this Act. The head of such division shall be a building inspector appointed by the said County Commissioners after he shall have duly qualified for the position by passing an examination before the examining and advisory

Section 9. The Commissioner of Labor and Industry, or his duly authorized representative, including the building inspectors of the Division of Building Inspection charged with the local administration of this Act throughout the State, shall have the right to enter at any reasonable time any rooms, buildings and places within this Commonwealth as specified in this Act, except in cities of the first and second classes, for the purpose of carrying out the provisions of this Act, and no person shall hinder or delay him or such representatives or building inspectors in the performance of their duties in the enforcement of this Act or refuse to admit or lock out any such representatives or building inspector or refuse to give him information required for the proper enforcement of this Act.

Section 10. The Commissioner of Labor and Industry shall direct and supervise the creation of the said Division of Building Inspection and the work and activities of the said division shall be subject to his direction and supervision. He may attach the Division of Building Inspection to the Bureau of Inspection or make such other arrangements as in his judgment will most effectively and economically accomplish the purpose of this Act, and such other work as is required by law to be performed by the Department of Labor and Industry. He shall have authority to appoint such persons or assign from among the employees of the Department of Labor and Industry such employees as are necessary to perform the clerical work, handle the funds appropriated, prepare and distribute the information necessary to those affected by this Act and perform such other services as are required to enforce this Act, and to fix the

compensation to be paid for such services, except where salaries or compensation are heretofore specified in this Act.

Section 11. The Commissioner of Labor and Industry is hereby empowered to collect, compile and disseminate information regarding the members, classes and costs of structures specified in this act and erected or remodeled in this Commonwealth following the passage of this Act. The heads of local Divisions of Building Inspection in cities of the third class, boroughs, counties and townships or in joint divisions of any of these governmental units shall submit in each month a report to the Commissioner of Labor and Industry, specifying the numbers, classes and costs of structures as prescribed in this Act erected or remodeled in the district in which their division has authority for the month preceding the month in which the report is submitted.

Section 12. Any person or persons, partnerships, firms or corporations erecting or remodeling any building or buildings as specified in this Act on and after January one, one thousand nine hundred and eighteen, shall obtain from the Division of Building Inspection of the governmental unit in which building or buildings are to be erected or remodeled a permit for such erection or remodeling and shall pay for such permit to the building inspector in whose jurisdiction the building or buildings are erected or remodeled a fee to be determined by the Industrial Board of the Department of Labor and Industry. The form and wording of such permits shall also be specified by the Industrial Board of the Department of Labor and Industry, and fees collected for such permits shall be paid by the separate building inspectors into the treasuries of

the local governmental units maintaining such divisions of building inspection.

Section 13. Any person who violates any of the provisions of this Act or any of the rules and regulations of the Industrial Board as promulgated by it for carrying into effect the provisions of this Act, or who resists or interferes with any duly authorized representatives of the Department of Labor and Industry or any local building inspector in the performance of his duties in accordance with the said rules and regulations shall be deemed guilty of a misdemeanor and shall upon conviction thereof before any magistrate, alderman or justice of the peace be punished by a fine of not more than one hundred (\$100.00) dollars, with costs of prosecution, which shall be final except for an appeal in the manner now allowed for appeals in suits for penalties.

Section 14. All prosecutions for violations of this Act shall be in the form of a summary criminal proceedings instituted before a magistrate, alderman or justice of the peace within the city, county, borough or township wherein the offense was committed. Prosecutions may be instituted for infractions of this law by the Commissioner of Labor and Industry or his representative or by any member of the local inspection divisions.

Section 15. All fines imposed and collected for any violation of this Act shall be forwarded to the Commissioner of Labor and Industry, who shall pay the same into the office of the State Treasurer for the use of the Commonwealth.

Section 16. All other acts or parts of acts inconsistent with the provisions of this Act are hereby repealed; provided, however, that no acts or parts of acts relating to cities of the first and second classes are hereby repealed.

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.—Exchange.

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

Office and Storage, York Road and Butler street, \$1,600. Welsh Bros. (O), on premises. M. Roy Sheen (C), 1220 Butler street. Brick, 2 stories, 25x51 feet, slag roof.

Nurses' Home, 2342 Fitzwater street, \$500. J. J. White (O), 2340 Fitzwater street. Brownworth & Co. (C), 1611 Sansom street. Fire escape.

Factory, Ninth and Nectarine streets, \$900. S. & J. Welsh (O), 304 Walnut street. William Easterbrook (C), 146 North Fourth street. Brick wall.

Shop, 322-24 South Hicks street, \$1,800. Hamilton & Kapneck (O), 1601 Lombard street. Ed. C. McColley (C), 350 South Sixteenth street. Brick, 2 story addition, 20x32 feet, slag roof.

Store and Dwelling, 470-72 North Fourth street, \$350. Sam Messinger (O), 472 North Fourth street. Sam Kay (C), 605 Morris street. Alterations, change doorway.

Heating Plant, Pelham Road and Horter street, \$1,500. Germantown Steam Co. (O), on premises. Wilbert O. Springer (C), 1624 Latimer street. Brick, 1 story, 10x27 feet, slag roof.

Party wall, 2412 North Twenty-seventh street, \$450. Geza Meyer (O), on premises. G. H. Eckard (C), 1320 North Carlisle street. Brick wall.

Stable, 754-56-58 South Broad street, \$1,000. Dayton Perry (O), 716 South Broad street. Charles Zebbley (C), Pine and Quince streets. Put in bulk front, interior alterations.

Factory, 1021-27 Wood street, \$28,000. Harrison C. Rea (O and C), 1314 Arch street. Reinforced concrete, 4 stories, 60x80 feet, addition.

Store, 4452 Frankford avenue, \$450. Chas. A. Button (O and C), Frankford and Sellers street. Bay window and alterations.

Storage, 1016 North American street, \$15,000. John M. Melloy's Sons (O), 419 Spring Garden street. H. H. Burrell (C), 206 South Quince street. Brick addition, 5 stories, 18x40 feet; 6 stories, 19x72 feet.

Store and Dwelling, 243 South Fifth street, \$1,000. M. Levan (O and C), 239 South Fifth street. Brick additions, 3rd floor, 13x27 feet, slag roof.

Retaining wall, Twenty-ninth and Allegheny avenue, \$2,900. Archbishop Prendergast (O), Eighteenth and Race streets. James Johnston (C), 1721 Ludlow street. Brick wall.

Store and Dwelling, 1723 South Second street, \$900. J. Freedman (O), on premises. Louis Cohen (C), 417 Christian street. Brick, 1 story addition, 3x10 feet.

Store and Dwelling, 1720 Sansom street, \$600. Randolph Land Corp. (O), 712 Walnut street. M. S. Buck (C), 1720 Sansom street. Brick, second story rear addition, 9x8 feet, slag roof.

Dwelling, 4313 Baltimore avenue, \$1,000.

M. Costello (O), 4313 Baltimore avenue. Strawbridge & Clothier (C), Eighth and Market streets. New porches and interior alterations.

Technical Notes and Practical Recipes

Aluminum Bronze.

Aluminum bronze formed of 95 per cent. copper and 5 per cent. aluminum has great strength and is highly ductile, while it is not adversely affected by high temperature.

* * *

Brass for Fittings.

A suitable mixture for brass fittings which require to be machined is stated to be the following: copper, 85 per cent.; lead, 5 per cent.; tin, 5 per cent.; zinc, 5 per cent. The castings are said to be sound, good, and to machine well.

* * *

Manganese Bronze.

The proportions for a good manganese bronze are said to be as follows: Copper, 58 per cent. to 60 per cent.; zinc, 39 per cent. to 41 per cent.; manganese, 1.5 per cent. to 2 per cent.; aluminum, iron and tin, 1 per cent. each.

* * *

Manganese Bronze Substitute.

A substitute said to be practically as good for manganese bronze is composed of 55 per cent. copper, 44 per cent. zinc, 0.5 per cent. tin, 0.5 per cent. aluminum. The alloy is said to improve if 2½ per cent. of a 30 per cent. manganese copper be used instead of an equal amount of simple copper.

* * *

Solders.

The addition of small quantities of bismuth and cadmium to lead and tin solders lowers the melting point, thus permitting a higher percentage of lead to be used. Good proportions are represented by the following: Lead, 75; tin, 23; cadmium, 1; bismuth, 1.

* * *

Hardening Lead-Antimony Alloys.

The hardening of mixtures of lead and antimony is a somewhat difficult problem. Copper is frequently added in proportions from 0.50 to 1 per cent. These proportions slightly harden the alloy. The use of larger proportions of copper is not satisfactory.

* * *

German Silver.

The composition of the best grade of German silver is said to be the following: Copper, four parts; nickel, two parts; zinc, two parts. This composition is one found very suitable for tableware. To avoid trouble in connection with annealing it is, however, necessary that the dies used in the manufacturing processes should be kept in perfect order.

BUSINESS WILL BE WHAT WE MAKE IT.

The war can have no real effect on business if every business man does his duty, for one of his chief obligations of loyalty is so to conduct his affairs that neither the national welfare nor his own shall be affected adversely during the coming months. We can all profit by keeping the words of Howard Coffin conspicuously before us:

We need prosperity in war time even more than in peace.

Business depressions are always bad, but doubly so when we have a fight on our hands.

The declaration of war can have no real evil effect on business.

We need more business, not less.

There is real danger in hysteria.

Indiscriminate economy will be ruinous.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 17, 1917.—Sealed proposals will be opened at this office at 3 P. M., June 20, 1917, for the construction of the United States post office at Front Royal, Va. Drawings and specifications may be obtained from the custodian of the site at Front Royal, Va., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 17, 1917.—Sealed proposals will be opened at this office at 3 P. M., June 26, 1917, for the construction of the United States post office at Monessen, Pa. Drawings and specifications may be obtained from the custodian of the site at Monessen, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 23, 1917.—Sealed proposals will be opened at this office at 3 p. m., June 27, 1917, for the construction complete of the United States post office at Vineland, N. J. Drawings and specifications may be obtained from the custodian of site at Vineland, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

"Chanelath," in official test, far surpasses the City's requirements of 406.4 lbs. per sq. ft. Scores 510.3 lbs.

Recent tests conducted under supervision of Philadelphia Bureau of Building Inspection with three concrete slabs reinforced with "Chanelath,"

- Prove that the *amount of seepage* through the mesh of Chanelath, as compared with normal seepage through wood, IS NEGLIGIBLE.
- Prove that the seepage was so slight that its loss had *no* appreciable effect on strength of concrete.
- Prove that the Chanelath develops a bond with concrete sufficient to develop full strength of the steel.
- Prove Chanelath as a satisfactory reinforcing material used without forms.

As The Editor Sees It

THE high cost of material and labor has had its effect on the building returns for May as compiled by Statistician W. W. Gamble, of the Philadelphia Bureau of Building Inspection. The totals for May, covering all classes of building, shows a decrease from the April figures of approximately \$1,500,000. Mr. Gamble's report, compiled from official figures, shows that there was spent on 971 building operations during May the sum of \$3,558,355. In April \$5,000,000 was expended in new building. A considerable percentage of the falling-off here recorded is attributable to the inactivity among operative builders due to advancing material costs and the uncertainty of the labor market. Less than half as many two-story dwelling were built in Philadelphia, in May of this year, as were built during the same month a year ago.

Since the beginning of the year 1,822 two-story dwelling have been constructed, as compared with 3,531 in the first five months of 1916. Real estate brokers believe that this condition will make for a ready market for older dwellings.

In the first five months of this year an expenditure of \$18,241,465 for 4,884 operations was made, in comparison with \$19,906,505 spent for 6,867 operations in the corresponding period last year. Though investment and speculative building has fallen off considera-

bly, a favorable condition the last few months has been the erection of additions to plants by business concerns to accommodate expanding business.

* * *

FOLLOWING is a summary of the month's building work, the statement giving the character of the buildings, number of permits issued, the operations and the estimated cost.

Character.	Operations.	Est. Cost.
Dwellings, 1 story ...	2	\$2,500

OPERATIVE builders with the necessary nerve to go ahead despite the general feeling of uncertainty, report mortgage money easier than it has been for years and sales uncommonly good. While the advance in every line of material has forced the asking of a considerably higher price per house than the buying investor has been used to, there seems to be a more or less general recognition of the fact that this is to be expected. The demand for houses is, if anything, stronger than ever. Rents are advancing and the curtailed output in the operative field has had the effect of concentrating the attention of buyers on a few, rather than as has heretofore been the case, upon a great number of offerings.

What seems to be needed chiefly among builders is courage to resist the spirit of depressing prophecy and the grit and initiative to push ahead much as if things were around normal. The universe can't afford to stand still simply because a few of the nations upon one of its planets are engaged in armed conflict. Business will be helped most materially by those big enough to disregard the Indian sign and to accept existing conditions as necessary ingredients in a situation altogether unusual. People are going to need houses this year and next quite as urgently as they did last year and the one before. They are prepared to pay more for houses, knowing as they do the series of jumps

that have taken place in labor, material and equipment during the past two years. An immense mount of money, passing, in fact, all previous records in expenditure, is going to be spent by our own and other governments upon preparatory activities incident to our entry into the war.

* * *

THIS money as it gets into general circulation is certain to produce a healthy and stimulating effect in many lines. What is needed most at this writing is confidence in the future. In the first flush of the unsettling conditions incident to conflict business has been drawn into an attitude of apprehension and distrust. We have become over-timid in estimating the possible consequences of our immersion in actual warfare. To continue this foolish timidity to extremes will be suicidal. It will retard if not paralyze a widening circle of industries.

Material prices are not likely to recede to any sensible extent for years to come. In the opinion of men who are in close touch with the facts prices are likely never again to return to ante-bellum standards. If we look these conditions squarely in the face it must be apparent to us that nothing much is to be gained by postponing projects until the return of peace.

* * *

THE fact that no man may say with any degree of certainty when peace will be in sight serves to add to the general uncertainty. The one, certain, definite, fixed, unanimously-accepted prognostication is that all lines are in for a tremendous business boom in the era immediately in the wake of settlement.

Europe will need to be practically rebuilt. Money will be freer and stand at a higher point per capita than has ever before been known in the nation's history. The demand for supplies in nearly every line will be enormous, urgent and long-continued. Is it wise, in a reasonable survey of all the circumstances to give way to gloomy prophecy and sit, Micawber-like, waiting for something to turn up. Let us get down to business. The earth is going to revolve long after this foreign imbroglio has passed into its page in the world's history.

* * *

THE United States Government is going into building on a large scale to house the new army of 1,000,000 men. Thirty-two towns are to be erected at the mobilization camps, each capable of providing for about 22,000 soldiers, a division of infantry. They are to be called cantonments, and each will be a complete little city in it-

self. The plans are all made. The locations are now being selected by the various department commanders, and as soon as the camp sites are chosen the surveys will be made and contracts will be let. The construction work will be done by contract, under the supervision of Army officers.

To direct this undertaking, Col. I. W. Littell, of the Quartermaster General's Division, has been placed, by order of the Secretary of War, in general charge of cantonment construction. Col. Littell has already begun organizing his forces for the work.

Six hundred million feet of lumber will be required, and arrangements are being made to secure this in all parts of the country, preferably in the section where the camps will be located. Canvas is so scarce and high in price at the present time that the amount needed for tents cannot now be secured. Two sets of tents are required each year, and the wooden construction is not only more desirable, the officers say, but will actually cost less than it would to provide tents.

* * *

EACH of the 32 cantonments contain about 2,000 houses. These will include quarters for the men, officers' quarters, kitchens, mess halls, bathhouses, storehouses and all the various buildings needed for housing the troops and providing for the varied activities of a big camp. Most of the buildings will be long, one-story structures, with some two-story houses. They will be of plain construction, but will be of modern type, and the plans and sanitary arrangements will carry out the most approved methods. They are expected to be the best arranged, cleanest, and most up-to-date barracks yet erected.

Each town will cover about 720 acres, a little over a square mile, and this does not include the large area required for drill grounds at each camp.

The contractors who are to do the construction work will organize their own forces of carpenters, laborers, etc., but the building will be done under the direction of army officers. Several officers from the Quartermaster's Department, Government inspectors, timekeepers, foreman, engineers, plumbers, etc., will be stationed at each camp town, and Col. Littell has already begun to arrange for the men required for this work.

In addition to the 32 camp towns, the Quartermaster's Department will erect groups of warehouses at points where army stores are to be concentrated. The exact number and location of these has not yet been determined, as they are to be erected to meet the needs of the army as they arise,

THE Government public building situation was the subject of the following editorial in the *Washington Post*:

"While the distinguished visitors from England and France will be too courteous to comment, one may imagine their impressions as they gaze upon the unique disarrangement of Washington's public buildings.

"Their very haphazardness of situation and construction is symbolic of the blunders of the past that must be rectified in every field of endeavor. The original plans of the Nation's Capital were laid down by the skilled hand of L'Enfant, whose rare foresight and broad vision contemplated a seat of government which would transcend in beauty and grandeur that of any of the capitals of Europe.

"And then we began to build in any fashion and after any model. L'Enfant mapped the approaches and Jefferson searched Europe for plans to aid in building designs. The Capitol and the White House were set on commanding hills, with an uninterrupted vista between. Then the Treasury Building, though of noble and dignified design, was thrust across the vista of the White House from New York avenue and Pennsylvania avenue, to be balanced later on by the State, War and Navy Building, blocking the vista on the opposite side. The Botanic Garden was placed in an area reserved by Washington and Jefferson for a wonderful park approach to the western entrance to the Capitol. Together with these and after came new styles of architecture, such as the State, War and Navy Building, the Postoffice Department and the Pension Office—huge, clumsy, awkward piles without any relation to the classic lines of the early architecture. The L'Enfant plan had become a 'scrap of paper.'

"Thus they stand to-day as monuments to the blunders of the past. They accentuate the demands for better methods of construction and co-ordination in every sphere of the Nation's development from now on. Fortunately there has been no period in our history when these matters have been more in the public mind than they are to-day. With the intelligent support of Congress, as is being given at present in park and building development, one may look hopefully forward to the time when the National Capital will present in its architectural structures the unmistakable evidences of its stability, grandeur, and order."

The man who does not advertise is like the man who stops his watch to save time.—Exchange.

EDITORIAL NOTES

The fight to rescind the contract for the purchase of the Hornor Building, 925-927 Chestnut street, for an administration building for the Board of Education, was practically settled at a special meeting when on the advice of counsel the Board voted to reaffirm the contract. The contract for the purchase of the building for \$600,000 was awarded at the March meeting of the Board. At the May meeting Simon Gratz brought up the question as to whether the Board had the legal right to make the purchase. An opinion of Hampton L. Carson was read. He stated that the Board did have the right under the school code to make such a purchase.

* * *

New shipbuilding yards are being constructed along the coasts of the United States. Last week four yards, to cost \$775,000, were started in the South.

* * *

The taking over by the Government of the 225,000 privately owned freight cars in the country, to be operated to relieve traffic congestion is advocated by Commissioner of Immigration Frederic C. Howe in a pamphlet to be published by the Joseph Fels International Commission.

* * *

No more skyscrapers are to be built during the war. The steel will be commandeered by the Government and used to construct ships. Two types of vessels will be turned out—destroyers, to hunt submarines, and merchantmen, built on a standard pattern, to carry food to the Allies. That President Wilson will act under the authority recently conferred upon him by Congress and divert every ounce of steel to Governmental shipbuilding was the statement made at the Navy Department last week.

* * *

South and West Philadelphia are to be connected by one of the longest and most ornate bridges spanning the Schuylkill River, under plans now being completed by Director Datesman for the development of South Philadelphia and the southern section of West Philadelphia, as the river link between the new boulevards on both banks. Under the plans drafted by Chief Albright, of the Bureau of Surveys, and his chief assistant, B. A. Halde-man, the bridge is to be constructed of steel and concrete, with viaduct approaches as illustrated by the sketch plan of the proposed structure which has been submitted to the Art Jury for approval. The total cost is estimated at about \$1,000,000, toward which \$60,000 has been already appropriated by Councils for preliminary work and construction of retaining walls for the eastern approach to the bridge from Gray's Ferry avenue.

* * *

Determined to do something for his country in spite of his failure to be included among

those sent to Fort Niagara, N. Y., for France, as an officer, William Campbell, Jr., of 6103 Columbia avenue, Overbrook, president of the William Campbell Company, Inc., manufacturers of linoleum, has enlisted in the Naval Coast Defense Reserve. Mr. Campbell has a wife and two children. He is a member of the Union League, Manufacturers' Club and the Lansdowne Country Club.

* * *

Ample depth of channel in the Delaware River is shown by the arrival at this port of the American steamship Edward Luckenbach, drawing thirty-one feet two inches of water. This is the deepest-laden vessel that has ever passed up the Delaware River. This was the maiden voyage of the Luckenbach, and it was once reported she would make enough on this voyage to pay for her construction.

* * *

Waste of labor through irregular employment and maintenance of large numbers of valets and flunkies are responsible for the present apparant labor shortage, Samuel Gompers, president of the American Federation of Labor, declared in a statement to-day. He recommended that instead of lengthening working hours to meet Government war demands, employers take greater care to provide steady employment and wealthy persons reduce their corps of servants.

* * *

At the Ninth Annual City Planning Conference, it was unanimously voted to change the loosely organized Conference into a City Planning Institute. A constitution was adopted and the following officers elected: President, Frederick Law Olmsted; secretary, Flavel Shurtleff. The offices continue at 19 Congress street, Boston.

* * *

National Housing Association, Chicago, October 15 to 17, 1917. Headquarters, Hotel La Salle. For information inquire of Lawrence Veiller, secretary, 105 East Twenty-second street, New York City.

* * *

President Mauran has appointed the following to serve as a committee to represent the Institute in the Industrial Safety Commission: Messrs. Owen Brainard, Elmer C. Jensen, D. Everett Waid, with Robert D. Kohn as chairman and the president as member ex-officio.

* * *

The Central Committee on Preparedness of the A. I. of A. has continued its work of classifying and card indexing the replies received from the circular letter sent out last month. There follows a supplementary list of those architects who are now attached to the military service. John Davis Hatch, San Francisco, Cal., Lieutenant, Coast Artillery, N. G. of Cal.; Harold M. Kingston, Rochester, N. Y., Troop H, 1st N. Y. Cavalry; Sherley W. Morgan, Princeton, N. J., Co. L, 2nd N. J.

Infantry; Herbert A. Blogg, Seattle, Wash., applied for O. R. C.; Harold W. Doty, Portland, Ore., N. G. of Ore.; Hermann Wischmeyer, Louisville Chapter, Class of Instruction, Engineer O. R. C.; Charles F. Norris, Gary, Ind., Sergeant, Co. F., 1st Ind. Infantry; Arthur B. Drake, Key West, Fla., Ensign, U. S. N. R.; A. E. Sprackling, Cleveland, Ohio, Past Commander, Cleveland Grays; Charles Werner, Brooklyn, N. Y., O. R. C.; George E. Parsons, Boston, Mass., 1st Corps Cadets, N. G. of Mass.; Harrison H. Atwood, Jr., Boston, Mass., 1st Corps Reserve, N. G. of Mass.; Alex. G. Donaldson, Michigan Chapter, Chief Boatswain, Lake Patrol Service.

* * *

Architects and builders have generally come to the realization that there is to be no advantage gained by further waiting for a recession in the prices of structural materials. While the feeling is strong in some quarters that the top of the market has been about reached and that prices cannot possibly be advanced much further, there is also a conviction that there will be no general recession in prices for the next four or five years, if then. The consensus of opinion in the building trades is now that high prices are with us for a long stay and no matter what occurs to reduce them temporarily, they can never return to the low levels of former years.

* * *

W. R. Grace & Co., of New York, through its technical department, is contemplating the extension of their activities through the foreign branches, in construction materials, both engineering and architectural. The technical department desires catalogues and price information pertaining to these classes of materials.

* * *

Whether the present war continues for one or two years or is ended in a few months, there is every likelihood that the high prices of building materials will be maintained at approximately the present levels. Foreign buying will continue to be a strong feature of the market for many years to come, and it is generally conceded that a large proportion of the immense quantities of structural materials and building supplies necessary for the reconstruction of destroyed cities and towns will have to be the product of American manufacturers. Already the manufacturers of certain lines of building commodities have realized this fact and have undertaken elaborate preparations to handle the demand from these quarters. Steel and lumber will be in particular demand by European governments after the war and the foreign orders will exert a strong influence on maintaining the prices of these important products.

* * *

Announcements of new Government contracts awarded and a large amount of additional work in prospect for training camps and cantonments are doing considerable to hearten the building trades. This character of building is rapidly becoming one of the most important elements to the builders and will assist largely in stabilizing conditions.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Office Building, Fifty-eighth and Woodland avenue, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, F. Gibson McIlvaine & Co., on premises. If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

Barrett Specification Roofs

On the Greatest Office Building in the World

THE Equitable Building is the greatest office-building in the world. It covers an entire New York City block.

From the foundations to the roof, towering forty stories from the ground, it represents the last word in architecture and in engineering science, as applied to the construction of modern fireproof buildings. It is one of the show-buildings of the country, and one of the many great structures that help to form that jagged sky-line of lower New York, famous the world over.

And like most of these buildings, the Equitable is covered with a Barrett Specification Roof.

So it is all over the country. The big permanent structures, such as railroad terminals, factories, skyscrapers, apartments, hotels, etc., are usually covered with these roofs.

They are more popular for permanent buildings than any other type, because they cost less per year of service, nothing for maintenance, and take the base rate of fire insurance.

In addition they are guaranteed for twenty years under the following conditions:

20-YEAR GUARANTY

The 20-Year Guaranty is now given on all Barrett Specification Roofs of fifty squares and over in all towns in the United States and Canada with a population of 25,000 and over, *and in smaller places where our Inspection Service is available.* Our only requirements are that The Barrett Specification, dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us.

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.

WHAT THIS MEANS TO YOU!

You can secure exactly the same roof on your building as covers the Equitable and other huge structures throughout the country, by simply stating to your architect or roofing contractor that you wish your roof constructed in strict accordance with The Barrett Specification dated May 1, 1916, and requesting him to deliver to you a 20-Year Surety Bond upon completion of the job.

BARRETT WATERPROOFING ALSO USED

Barrett Specification Pitch-and-Felt Waterproofing also does service in the great Equitable Building. Over 200,000 square feet are in use to protect the bank vaults, kitchens, refrigerators, pits, etc., as well as underneath and around the deep cellars that penetrate to a depth of fifty-two feet.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

BUILDERS

Before your present company has a chance to say "No," ask me about placing your surety bonds. I'll give you the best of service, relieve you of all details, insure your getting lowest rates and protect you in every way. Get REAL SERVICE.

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete. But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder.

"You'll find one of these Base-board Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architects' Office, Washington, D. C., May 23, 1917.—Sealed proposals will be opened in this office at 3 p. m., June 27, 1917, for the construction complete of the United States post office at Vineland, N. J. Drawings and specifications may be obtained from the custodian of site at Vineland, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LUMBER YARDS

Third and Girard Avenue, Philadelphia

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

As The Editor Sees It

THE *Journal of the American Institute of Architects* has some interesting views to express on the subject of the bill pending in the Pennsylvania Legislature requiring registration.

"It is becoming evident," remarks the *Journal*, "that there is at present a great diversity in the registration and license laws of the different States, and that there many defects in them which give serious concern to those interested in the ultimate establishment of a law which will not only make a wise provision for safeguarding the public interest, but which will also avoid conflicts between the various States. While there may yet be room for a difference of opinion on many points, it would appear that much could be accomplished by co-operating with the Special Committee of the Institute which was appointed for the purpose of just such co-operation. Mr. William D. Bannister, of the Brooklyn Chapter, is the Chairman of this Committee, and we believe that if proposed laws could be submitted for suggestions and constructive criticism, the subject of registration laws would gain much thereby."

"We feel that it is never inopportune to restate the basis upon which such laws should be enacted—always for the protection of the public and never for the aggrandizement of the profession, except as the educational and technical requirements imposed by those bodies which have the licensing power will help

to raise the standard of architectural equipment. *No legislation should be thought of which, even by remote indication, deprives any intending builder of the right to have his plans made where-soever he wills and by whom he chooses.* Registration laws should be for the purpose of making a distinction between the architect who possesses the knowledge, experience, and skill necessary in pursuing his calling and the man who takes the title to himself as a business expedient. Under any kind of a law it will take many years to change the present conditions, since it is scarcely possible to shange a situation which has persevered for many years by legislative enactment. Registration laws of the right kind must aim at an ultimate condition rather than at the immediate and complete correction of those evils from which the public suffers wherever incompetence and inexperience usurp a title which should imply competence and experience in a very high degree."

* * *

THAT these qualities are not always possessed by those who call themselves architects is shown by the fact that 25 per cent. of those who applied for registration in New York State were not granted a certificate. These men may still continue their practice and call themselves architects, but the enactment of a registration law does not cause the State to step in and give them a badge of competency. This is a point

which should be very carefully studied in all proposed laws, it is manifestly contrary to the public welfare for a State to certify to competency where it does not exist, even though it is without the power to restrain the activities of those who have pretended to possess the ability required to practice architecture, and have thus built up a business which is beyond the reach of the law, under our constitutional safeguards."

* * *

IDAHO is the twelfth State (if our list is correct) to enact a Registration law. The law is entitled "An act to provide for the licensing of architects, and regulate the practice of architecture in the State of Idaho."

Despite its title and its length (3,000 words against New York's 1,300) one may hazard the guess that Idaho has one of the best laws yet passed. The following notes are intended to mention some of the salient details and also some of the serious faults of this law.

Board of Examiners: Five, one an architect or engineer member of the faculty of the State university and four architects of five years' experience. Five years might better be ten if art in the State were older. Term of office four years. Five might be better, thus bringing in not more than one new member each year.

The surplus fees paid over annually to the State Treasurer, instead of going into the general fund, "shall form the nu-

**BLUE
PRINTS**

cleus of a fund to provide for an advanced course of architectural study to be established in the University of the State of Idaho."

A regrettable feature of this law is that every man in the State who called himself an architect before the law went into effect can demand a license. In effect the Board of Examiners has no discretion, but must issue to each a badge of competency, however poorly qualified he may be.

* * *

THIS provision not only prolongs the time for raising the standard of education, but at one stroke holds before the public the most unworthy architects as a standard sufficient for registered or licensed architects. That means a low standard which cannot be eradicated from the public mind in generations. The respect of the public for the profession will be deserved if a reasonably high standard of character and competency is adopted at once. Incompetent men may continue to exercise any right they had when the law went into effect, but a registration law should not place a seal of approval upon them.

One superfluous requirement of this law, which is a highly expensive and annoying nuisance, is that each architect must have a seal which is to be impressed on all drawings and specifications. Why not as well require physicians to seal every prescription?

Section XIX of this law undertakes the task of defining the word "architect" as one who designs or supervises buildings for others and to be constructed by persons other than himself, and proceeds by a peculiar definition of "a building" to eliminate from architecture pergolas or park shelters, smokestacks or railway track sheds a mile long, simply because they do not possess all of the three assumed essentials of a building, namely, "foundation walls and roof."

* * *

CIVIL engineers are not limited to practice under their own proper title, but are also required to call themselves architects if they design buildings. This will surely lead to jealousy and friction.

It seems hardly fair or wise to prohibit engineers from doing buildings under their own title. If they wish to call themselves architects then they should be required to qualify on the artistic side of architecture. Instead of trying to force engineers who may have no artistic inclinations to qualify esthetically, it is better surely to encourage engineers and architects to co-operate. An architect and an engineer in partnership make an admirable team, for instance, to do factory work.

WE are here quoting the views of Mr. D. Everett Waid who contributes also an analysis of the Pennsylvania bill now pending:

"A bill has been introduced in the Pennsylvania Legislature," writes Mr. Waid, "which it is to be hoped will be amended before passage, but which, as introduced on April 2, 1917, on account of its good and bad features is worth the study of other States where similar legislation is in prospect. In the first place its title is in excellent legal form, exact and comprehensive of the content of the act.

"The bill provides seven in the Board of Examiners—two professors of architecture, one professor of engineering and four architects of ten years' practice, and all members of the American Institute of Architects.

"Architect" is better defined than in the Idaho law since the meaning of 'building' is not limited.

"The secretary and the treasurer of the Board of Examiners are given a combined total of \$750 per year, and the other members must serve without pay beyond reimbursement for actual expenses. This, if legal, is surely a mistake. Few honest men can afford to give such laborious service for nothing, and others would be tempted to use their office and its influence dishonorably. Ten dollars a day for actual service is not open to serious criticism one way or the other.

"The age twenty-five, general education two years high school, and experience of seven years—these requirements are an improvement over the New York law."

* * *

THE reciprocal relation with other States as expressed in this bill is a conditional privilege which is likely to hamper the Board of Examiners in cases on which it would like to act. Compare with the New York and Idaho laws.

"It may be predicted that \$10 per year for renewing the license will be regarded as an objectionable tax.

"The Board of Examiners is to own seals for all architects in the State and will have the pleasure of issuing and recalling and reissuing these seals. The architects pay the cost and enjoy as best they can applying impressions to all their drawings and specifications. Surely there is trouble enough without paying for such useless gratuities.

"Pennsylvania in this bill proposes the same serious mistake which Idaho has made in giving every so-called architect a license tag. If the law is intended to encourage education and is to discriminate in future with higher standards, why not begin at once with at least some reasonable standard and grant certificates to architects now in practice who are

doing legitimate work and refuse registration to those who cannot show an honest record and at least one or two decent buildings? Professional practice laws should fix some measure of skill and ability. Licenses are issued to peddlers and taxicabs for a different fundamental reason."

* * *

AND in the meantime, notwithstanding the explicit disclaimer, of any intention to interfere with the drawing of plans by builders, made by the author of the bill in these columns, a number or two back, the Master Builders' Exchange, of this city, is still offering a vigorous opposition to the passage of the bill. The position of the *Journal* would seem to be as sound as it is sensible. The *Journal* contends that registration laws of the right kind must aim "at an ultimate condition rather than at the immediate and complete correction" of existing evils. The chief objections heard to the Pennsylvania law issue from the feeling that it is over-drastring in certain of its provisions. To be sure, these may be amended or eliminated before the bill reaches final passage. The idea behind the measure is a good one. There should be little difficulty in reaching such a compromise on the disputed sections as will make possible the bill's ultimate enactment. Some form of registration is an absolute necessity.

* * *

ATENTION is called to the fact that the New York State law regulating the practice of architecture has recently been amended.

One of the amendments extends the exemption period whereby certificates of registration may be issued to architects who were in practice previous to the enactment of the original registration act, namely, April 28, 1915. Any architects who were in practice in New York State previous to that date may now secure certificates, provided their applications are filed before January 1st, 1918, and provided such applications are approved by the Board of Examiners. Application blanks may be secured by addressing the Department of Education, Educational Building, Albany, New York.

One of the amendments just enacted is of interest to architects of other States and reads as follows: "Any architect who has lawfully practiced architecture for a period of more than ten years without the State shall be required to 3—Builders' Guide. Orr take only a practical examination, which shall be of the nature to be determined by the State Board of Examiners and Registration of Architects."

One of the amendments of the New York law which is of interest to those of other States contemplating similar legislation is as follows: "But this arti-

cle shall not be construed to prevent persons other than architects from filing applications for building permits or obtaining such permits."

* * *

THE railroads are seeking a general advance in freight rates and, in view of the advances that have taken place in all other lines, are probably entitled to a certain amount of consideration. The members of the Interstate Commerce Commission, now engaged in taking testimony in the matter, should, in arriving at a decision, make one fact very clear and plain to the petitioning carriers. And that is, that with the coveted advance in rates they shall be required to end the condition of freight congestion from which shippers in all lines have been suffering for the

past year or more. The plea of insufficient cars has become tiresome to the point of monotony. If the railroads have been unwilling to supply cars, in a sufficient quantity, at the old rates, no such reason will hold good with these rates advanced to what the railroads regard as a fair scale. Let it be made very clear and explicit to the railroads that one of the conditions to be looked for as a result of permitting the desired increase in rates will be an always adequate supply of cars with such other improvements as to existing difficulties as shall make deliveries satisfactory to shippers and public and the service adequate to every reasonable demand upon it. And let it be made plain that this shall apply to coal and foodstuffs as well as to every form and grade of building material.

ager of the company, has been elected vice-president.

* * *

The existing high prices of structural materials of all classes continue to be the principal factor that is now responsible for withholding a number of important operations from active construction. Although it is almost generally realized now that there can be no important recession in commodity prices for years to come, many prospective builders are holding out in the hopes that some circumstance will occur whereby material prices will be reduced to a level that will permit them to go ahead according to their original plans. In consideration of the high prices, owners who find it expedient to start their operations in spite of the prevailing prices, are cutting down their plans to the minimum and substituting, where possible, materials less costly than those originally specified.

* * *

The Lumber Trade Commissioners who will investigate foreign lumber markets for the U. S. Government, will leave the United States on August 1 to spend two years in Europe. Commissioner John R. Walker, of Washington, D. C., will study conditions in England, France and Holland. Commissioner R. E. Simmons, of Oshkosh, Wis., will investigate the lumber trade and timber resources of Russia and Siberia. Other members of the Commission will visit Norway, Sweden, Spain, and the Mediterranean countries. The Trade Commissioners are now on a tour of the United States inspecting the saw mills and the available export grades. The entire Commission was in Chicago recently in order to confer with the lumber producers of Wisconsin and Michigan.

* * *

A zoning plan similar to the one now in force in New York City is being advocated for Jersey City. According to one of the oldest real estate operators in Hudson County, the best evidence that the system should be adopted in every city is the manner in which it has worked out in New York.

* * *

At the annual meeting of Sargent & Company, New Haven, Conn., Wilfred Lewis and Ziegler Sargent were elected as directors of the company and the following members of the Board of Directors were re-elected: Henry B. Sargent, Edward R. Sargent, Joseph D. Sargent, G. Lewis Sargent, John Sargent, Bruce Fenn and George F. Wiepert. The new officers of the company are as follows: President, Henry B. Sargent; vice-president, C. Lewis Sargent; secretary, Murry Sargent; treasurer, Ziegler Sargent.

* * *

Those interested in waterfront development are anticipating a rise in land values as a result of the newly revived shipbuilding industry. The long looked for harbor improvement, coupled with renewed construction activity along this line, may be reflected in an advance in waterfront values.

EDITORIAL NOTES

The outstanding feature of the building situation continues to be the immense amount of construction work undertaken by the Federal Government in the erection of buildings at the numerous training and mobilization camps. Millions of dollars worth of work have already been contracted for and there is estimated to be an equal amount, if not more, in prospect that will be placed under contract during the coming months. The effect of this building movement on the part of the Federal authorities is beginning to be felt through the trade in all parts of the country not only by the fact that there has been a call for great quantities of building materials and supplies, but also by the effect on the labor situation. This military construction is taking the services of a great number of skilled mechanics out of the general building business, and while the result in some directions is good, there is no doubt but that the concerns specializing in private construction will feel the shortage for a long time.

* * *

W. E. Stephens Company, architect, has moved its office from 152 Barrett street to 208 South Centre street, Schenectady, N. Y.

* * *

According to figures recently tabulated the construction contracts throughout the Eastern States for the Federal Government in connection with the preparedness program will call for the immediate expenditure of approximately \$120,000,000. A large percentage of this money will be spent in and around the Metropolitan district. Two structures recently started in the Brooklyn Navy Yard will cost about \$2,000,000 and the improvements that are contemplated, which include the deepening of the East River channel, will involve the expenditure of nearly \$20,000,000.

Edward Warren Young, formerly of New York, after practicing for ten years in Savannah, Ga., has reopened offices at 30 Church street, New York City.

* * *

Ernest P. Goodrich, consulting engineer with A. Pearson Hoover, associate, are now located at 261 Broadway, New York. They specialize in valuations, organizations and developments of industrial plants, city planning, harbor, port, railroad and water terminal developments, improvement of transportation facilities, municipal engineering and administration, valuation and rate making, franchises and reinforced concrete and foundations.

* * *

Hunley Abbott, vice-president and chief engineer of the MacArthur Concrete Pile and Foundation Company, has resigned from that company to accept a position with the Bartlett Hayward Company, of Baltimore.

* * *

The general situation in the building trades seems to be fairly satisfactory. While it is quite true that there was not a large amount of new construction placed under contract there has been a slight indication of a renewal of life in the building and allied trades, which is hoped will grow as the summer advances. There are signs pointing to an end of the depression that the building industry has been laboring under for a long time, and while it is not expected that the activity will equal the volume that was confidently expected before the advent of the United States into the war, it will at least be sufficient to keep things moving.

* * *

D. H. Thomson has been elected president and treasurer of the Terry Steam Turbine Company, Hartford, Conn., as successor to the late James Terry. N. L. Snow, sales man-

National Metal Trades Association at its recent meeting at the Hotel Astor elected the following officers for the coming year: President, W. H. Van Dervoort, of the Root & Van Dervoort Engineering Company, East Moline, Ill.; first vice-president, Murray Shipley, of Lodge & Shipley Machine Tool Company, Cincinnati, Ohio; second vice-president, H. W. Hoyt, of the Great Lakes Engineering Company, Detroit, Mich.; treasurer, F. C. Caldwell, of H. W. Caldwell & Son Company, Chicago, Ill.; Homer D. Sayre, People's Gas Building, Chicago, secretary.

* * *

Harry B. Coleman has been made president and manager of the Schoedinger-Marr Company, Columbus, Ohio, to succeed Mr. Jacobs, who has retired on account of ill health. Mr. Coleman was formerly connected with the Russell & Erwin Manufacturing Company, New Britain, Conn., and the T. B. Rayl Hardware Company, Detroit, Mich.

* * *

American Society for Testing Materials will hold its twentieth annual meeting at Atlantic City, at the Hotel Traymore, June 26 to 30, inclusive.

* * *

The Georgia Marble Company in a recent reorganization have taken over the Kennesaw Marble Company, of Marietta, Ga.; the Blue Ridge Marble Company, of Nelson, Ga.; and the George B. Sickels Marble Company, of Tate, Ga. The general offices of the concern will be at Tate, Ga. Colonel Sam Tate continues as president of the company, Mr. Walter E. Tate as vice-president, and Mr. R. L. McClain as treasurer. Mr. G. M. Atherton, formerly treasurer of the Blue Ridge Marble Company, will become assistant treasurer; Mr. A. V. Cortelyou, who was formerly president of the Kennesaw Marble Company, is a vice-president of the new company. Mr. Alex. Anderson, formerly vice-president and general manager of the Blue Ridge Marble Company, is another vice-president. Mr. Harry H. Miles, formerly vice-president of the Blue Ridge Marble Company, is another vice-president. Mr. H. L. Litchfield, formerly secretary of the Georgia Marble Company, is another vice-president. Mr. W. A. Richardson, formerly treasurer of the George B. Sickels Marble Company, is secretary. Mr. Harry H. Miles has charge of the New York office and Mr. Joseph B. Rheinhalter has charge of the Cleveland office.

TORCH BLASTING.

Large nigger-head boulders up to 8x10 feet were recently encountered in the subway excavation near Borough Hall, in Brooklyn, where it was impracticable to break them up by dynamite blasting, and satisfactory results were obtained by the use of oil burners. The great heat developed by one of these burners was concentrated on one point of the surface

of the boulder to be broken, for ten or fifteen minutes, until the rock was expanded so much that it split at the seams, after which the operation was repeated on the smaller pieces until they were all reduced to convenient size for handling. The burner consumed approximately one gallon of kerosene oil per hour. Two men and the torch broke up the boulder mentioned in about one hour at a total cost of approximately sixty cents.

RESISTANCE MATERIAL.

The electrical trade is interested in a plastic molding compound that is made from the anhydrous resin that results when dry phenol reacts with dry hexamethylenetetramine. The claim is made for this material that it has a permanent color and surface brilliance that cannot be impaired by age. The compound contains no ingredients which adversely effect brass inserts or other metal parts. This compound is said to have high tensile strength, high electrical resistance, and is not effected by solvents, oils, cleaners, heat or moisture. The product is marketed in rods, tubes, sheets, granular form, plastic form and blocks.

GLUE MOLDS FOR CONCRETE.

Multiples of small concrete ornamental members such as handrails, balusters and units of a similar character have been advantageously cast in molds made of ordinary glue. The wooden pattern is nailed to a board and enclosed with shallow sides, making an open box higher than the pattern, which is then filled with melted glue, covering the pattern to a depth of about one inch. After the glue has completely set, the form is turned bottom side up and the bottom and pattern removed, leaving a mold which is painted with white lead, followed with shellac, to prevent the absorption of moisture. This mold may with care be used for a large number of castings and can be cut up, melted and used over again with only a slight loss.

ARCHITECT'S RIGHT TO COMPENSATION.

When a statute or ordinance requires an architect to obtain a license before pursuing his occupation, an unlicensed person is not entitled to recover compensation for services in preparing plans and specifications, although his employer may have known that no license had been obtained. This point was declared by the Michigan Supreme Court recently in the case of Wedgewood vs. Jorgens.

Plaintiff prepared plans and specifications for a building which defendant contemplated but later abandoned, and plaintiff sued to recover the agreed compensation. The defense interposed was based on plaintiff's non-compliance with a local ordinance requiring architects to obtain annual licenses, pay a \$5 fee, and furnish a \$1,000 bond. The ordinance defines an architect as being any one who plans or supervises the erection or alteration of buildings for others, the construction work

being done by third parties. Plaintiff, a builder and contractor, did not do the work in question himself, having it done by an unlicensed architect, with the assent of the owner.

In determining that plaintiff was not entitled to recover, the Supreme Court holds that the employing owner's knowledge that no license had been obtained did not avoid invalidity of the contract of employment; and that the fact that the city authorities had not enforced the ordinance did not deprive the regulation of its binding effect.

An architect employed to superintend the construction of a building for lump sum compensation is entitled to extra pay for prolongation of the work by changes in the plans made at the owner's instance, holds the Texas Court of Civil Appeals in the case of Shear vs. Bruyere. The court cites an earlier decision in the same state wherein it was decided that notwithstanding a contract had been made to superintend the construction of a building for a lump sum, still, if the owner made changes during the progress of the work, requiring longer time to complete the building than originally contemplated, and the work was done with the owner's knowledge, the architect could recover extra compensation for such additional services.—Building Age.

POST-BELLUM POSSIBILITIES.

Public aeroplane landings and private landings and hangers may furnish problems that will tax the skill and ingenuity of the architects and consulting engineers of the next decade, according to men who have watched the rapid development of the science of aeronautics.

Architects may spend many sleepless nights trying to devise a method of making a hangar harmonize with modern residence or landscape architecture. A three-machine hangar with living rooms for the aviator on the second floor will not add to the attractiveness of a Dutch Colonial residence and the spectacle of a hangar in the immediate vicinity of an Italian garden, would jar the aesthetic sensibilities of an Esquimo. Perhaps some architectural genius of the future will introduce the world to an aero era of architecture.

DAMP-PROOFING WALLS.

For insulating stone buildings so that they will not absorb dampness from the surrounding ground, a new process has been introduced in Europe which, it is claimed, has proved successful. The method consists in sawing a slot in the foundation a few inches above the ground line and inserting in this lead plates coated with asphalt. To accomplish this a machine has been constructed which cuts a kerf about an inch in depth in the stone. After the plates are set in place temporary wooden forms are laid and liquid cement employed to close the crevices. This plan, it is said, prevents moisture from creeping up a wall, since it is unable to pass the insulation blocks.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Reservoir, Nicetown, Philadelphia. Architect, private plans. Owners, Midvale Steel Co., Widener Building, Philadelphia. Reinforced concrete, 30x75 feet, metal frame. Owners have received bids.

Store and Dwelling (alt.), 405 North Sixty-fourth street, Philadelphia. Architect, Henry A. McGrath, 549 North Sixty-fourth street, Philadelphia. Owner, F. Iaunczelli, care of Lambert & McDermott, 403 North Sixty-third street. Brick, 3 stories (heating and electric work reserved), slag roof, cement and pine floors, hollow metal skylights, fire doors, ornamental iron work. Architect has received bids.

Store and Office Building, 1430 Walnut st., Philadelphia. Architect, Richard C. Loos, 1017 Chestnut street, Philadelphia. Owner, name withheld. Consists of new stone front, electric lighting, tile work, rolled steel sash, metal bulks. Plans completed. Architect will sub-let.

Store and Apartments, Thirty-sixth and Powelton avenue, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, name withheld. Brick and stone, 3 stories, 21x50 feet (2 apartments), slag roof, hot water heating, combination lighting, hardwood floors, tile work. Architect taking bids, due June 18th. Metzger & Fisher, Otis Building; Smith-Hardican Co., 1606 Cherry street; H. E. Grau Co., 1707 Sansom street; Barclay White & Co., 1513 Sansom street, and Standard Const. Co., 1713 Sansom street, are figuring.

Garage, Thirty-sixth and Powelton avenue, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, name withheld. Brick, 1 story, 50x152 feet, slag roof, cement floor, electric lighting, steam heating (gasoline storage system reserved). Architect taking bids, due June 18th. Metzger & Fisher, Otis Building; Smith-Hardican Co., 1606 Cherry street; H. E. Grau Co., 1707 Sansom street; Barclay White & Co., 1713 Sansom street, and Standard Const. Co., 1713 Sansom street, are figuring.

Extension for Air Pump, Schuylkill avenue and Christian street. Architect, private plans. Owners, Phila. Electric Co., Tenth and Chestnut streets, Philadelphia. Concrete, 1 story, 27x51 feet. Owners taking bids, due as soon as possible. Turner Concrete Steel Co., 1713 Sansom street, are figuring.

Paving, various streets, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Bureau of Highways, Department of Public Works, Geo. E. Datesman, Director, City Hall, Philadelphia. Paving with asphalt and granite block, surfacing with macadam and new curbing. Owners ready for bids, due June 21st at noon. Inquire at room 232, City Hall.

Foundry Building, Navy Yard, Philadelphia. Owners, U. S. Gov., Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department,

Washington, D. C. Architect, private plans. Hollow tile and steel, 1 story, 456x180 feet and 648x180 feet, asbestos roof (heating, plumbing and lighting separate bids), concrete floors, rolled steel sash, fire doors, metal lath, metal window guards, ornamental iron work. Owners have received bids.

Hotel and Restaurant (alt. and add.), 215 S. Broad street, \$50,000. Architect, Richard C. Loos, 1017 Chestnut street, Philadelphia. Owner, Daniel J. Kopp, 5335 Baltimore avenue, Philadelphia. Stone, brick, steel and terra cotta, 4 stories, slag roof, cement, composition and wood floors, metal lath (plumbing, heating, electric work and elevators reserved), tile, marble and terrazzo work, ornamental iron work. Plans completed. Architect will take bids.

Residence (alt. and add.), West Bell Mills road, Chestnut Hill, Pa. Architects, Tilden & Register, 1713 Sansom street, Philadelphia. Owner, Daniel H. Farr, 1626 Walnut street, Philadelphia. John T. Scully Foundation Co. are Using Autocars

John T. Scully Foundation Co., Boston, Mass., recently said: "With our Autocars we are putting out about 50 tons per day per car. They are always going. We really would not know how to get along without them. The fact is that our customers are beginning to call for Autocar delivery because they find that with these cars we are getting material to them promptly. When Stone and Webster were building a big plant for the Boston Woven Hose Company, they told us that they did not want delivery with anything but Autocars because they could get into narrow places and dump where teams couldn't get in."

Write for illustrated catalog and list of more than 4500
concerns using Autocars in every line of business.

FACTORY SUPPLIES

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete." But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder. "You'll find one of these Base-board Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

As The Editor Sees It

THE greatest evil the building trades are called upon to face, in the crisis now facing the country, is the pessimistic attitude of the fellow who takes the position that he "isn't going to do any business until things clear up."

Pressed to explain just what he means by "clearing up" he goes into an extended monologue about the scarcity of labor, the advancing prices of materials, the uncertainty regarding deliveries, the possibility of a crop shortage, and a lot of other twaddle in the doleful, dubious and depressing vein that would move one to think that the Germans were about to descend upon us from two sides and push us into the great Salt Lake.

Whereas the real facts of the case are that the Germans are hemmed in on all sides, are being slowly but surely ground to defeat, are facing an internal situation scarcely less desperate than that which threatens them from without and are likely to collapse long before our carefully made plans for mobilization are half completed.

* * *

THERE are, to be sure, serious sides to the present situation. Labor is undoubtedly high and scarce and certain to be, if anything, higher and scarcer within the next six months. Material costs are still advancing in many lines with little if any prospect of an ebb movement. Deliveries continue to be uncertain in certain classes of ma-

terial and are likely to remain uncertain for some time to come. But on the other hand, money was never more plentiful, sales are brisk at advanced prices, and many lines of industry will be compelled by the war demand for their products to double and triple their present facilities.

Operative and investment builders who have had the hardihood to go ahead with their projects despite the obstacles inherent in the present situation report sales easy, the demand greater than it has been for many years past and considerably advanced prices no bar to sale or lease. So acutely is this the case that many of the operators who at the outset of the alarm incident to our entry into the war took to the cyclone cellar there to await a clearing of the atmosphere are up and about again ready to resume business where they left off.

* * *

THE fellow who has waited, hoping for prices to come down may as well make up his mind that the miracle for which he has been waiting is not due to happen either this year or the next—if it happens at all.

Indeed, some of the shrewdest observers in the trade are of opinion that material and labor prices are up to stay and that the era of cheap building has gone never to return. How the situation faces up in other cities may be fairly gauged by an article in the current number of the *New York Real Estate Record*. Commenting upon the building situation

in that city the writer remarks:

"Military construction continues to be the predominating feature of the building situation at the present writing. The past week witnessed the award of some important contracts for Government work and there is a large amount of this type of business still in prospect. A number of prominent building concerns in New York City and vicinity have recently become identified with construction of this character and although the profits to be derived are not particularly imposing they are at least certain, and the bidding has been spirited and the competition quite keen. Private building operations are languishing somewhat and there are not many new structural projects being reported to the trade. Alteration work is fairly active and these is a good quantity in sight. There seems to be a growing feeling in the building industry that the conditions that have maintained for some weeks will improve shortly and that they would immediately show a decidedly better front if it were not for the difficulties encountered in obtaining prompt deliveries of materials, especially structural steel.

* * *

MANY architects throughout this city and surrounding territory have clients that are ready and willing to commence the construction of large buildings but who are holding off for the one reason that deliveries of structural materials, particularly steel,

**DRAWING

**BLUE
PRINTS**

are so uncertain that it makes starting a perilous operation. To the majority of this type of owners the cost of the building is a matter of secondary consideration. The proposed structures are matters of economic necessity to the owners and they are quite willing to commence work immediately and notwithstanding the present high cost of materials, if they could obtain some assurance that their materials and supplies would be forthcoming within a reasonable space of time.

"The labor situation is daily becoming more trying to the building industry, not only to the contractors, but to the manufacturers of various structural materials. Practically every branch of the building and construction business will shortly have to deal with the important problem which will result as a natural consequence from the conscription of young men for the new army. Quite a large percentage of the employees of the factories and concerns that produce materials of construction are young men subject to the draft and it is equally true that many of those actually engaged in construction work, lumbering and similar employment are likewise awaiting the call of the Government to military duty. The problem that is now confronting the building industry is how to fill the gaps left in the ranks by the call to the colors.

* * *

BUILDING material prices, while not advancing at the rate they were a short time ago, are still in the main upon the upward trend. Some commodities seem to have become stabilized but others are indicating a decided tendency toward higher levels and there is no one willing to hazard even a guess as to when they will return to the normal. The chances that structural materials will again come back to the prices that maintained a few years ago are growing less daily. The demand is still strong from many quarters and although the domestic requirements should suddenly fall off there will continue to be a heavy demand from European sources after the war is ended that will keep the prices high for years to come. Since the declaration of war there have been contracts closed to the extent of about forty millions of dollars for the reconstruction of important structures in the ruined sections of France. For the rebuilding of these wrecked structures a large percentage of the materials will be purchased in the United States. The contracts already placed are said to be the forerunners of a mighty building movement in the devastated territory that will take years to rehabilitate and which will require the expenditure of millions of dollars and call for millions of tons of materials, the most of which will be the product of American manufacturers."

THE reports of the building interests from the territory adjacent to Greater New York indicate that the structural industry is holding its own in a satisfactory manner and that the outlook for a continuation of fair business is bright. There is a feeling growing in the building trades that the depression that has existed for some weeks subsequent to the declaration of war is almost over and that the industry will return to its normal balance in a short time. While no boom is expected, there will no doubt be a resumption of building activities that will have the effect of stabilizing conditions to a remarkable degree."

* * *

THAT which is needed just now to stabilize things is a good, strong dose of business optimism. Under the heading of "War-Time Wisdom" *The Philadelphia Chamber of Commerce Journal* prints the following:

"Practice economy, but not parsimony; cut out waste, but maintain the American standard of comfort."

"War is bad business, but don't you ever make the mistake of thinking that war means bad business."

"It takes a dozen farmers, mechanics, trainmen, butchers, bakers, tailors and shoemakers to maintain a soldier."

"We can't put a million men under arms without putting at least twelve mil-

lion other men under the eight-hour clock."

"Factories must work day and night shifts, railroads will operate extra trains, produce will ride to port from every arable acre on the continent."

"Get busy and keep busy. Hire new help, enlarge your plant, order machinery at once."

"However sad the price, the business outlook was never better."

* * *

THIS has the right ring to it. What we need more than anything else is confidence, confidence in ourselves, confidence in our government, confidence in our fellow-men, confidence in our business.

It's a pretty big contract that which democracy is undertaking abroad, but it is in the hands of men big enough and numerous enough to handle it and there need be no doubt whatever regarding the final outcome.

And in the wake of peace there is going to be such a boom in every line of American industry as this strong, young nation has never known. All Europe is practically to be rebuilt. We are elected to do the rebuilding. Are we preparing to make the most of our opportunities?

* * *

LET us get rid of the gods of doubt, of gloom and pessimism and get ready to keep step with the march of progress.

EDITORIAL NOTES

Some of the prominent manufacturers of builders' hardware have again announced increases in prices. The advance in the majority of instances is due to the increased manufacturing costs, which are in turn caused by the scarcity and high prices of metals and other raw materials and the difficulties experienced in obtaining adequate labor.

* * *

The new Board of Governors of the Lumber Trades Club of New York, at their recent meeting, elected Aruthur C. Crombie to the office of president, succeeding Van W. Tyler, whose term expired last month. The other officers are C. H. Hershey, first vice-president; John L. Cutler, second vice-president; Charles Hill, third vice-president; Frank L. Zabriskie, treasurer, and E. F. Perry, secretary.

* * *

The Master Tin and Sheet Metal Workers' Association of Philadelphia, at the regular monthly meetin, took up the question of improving the service of its Credit and Collection Bureau, and adopted the recommendation of the Board of Directors to install the "Credit Reporting Service" of the Commercial Reference Company of Philadelphia. Members of the Association can now call up

the office and get information on the financial standing of any individual to whom they propose extending credit. This information will be given free of charge, but should an exhaustive report, entailing property searches, etc., be desired, \$1.00 will be charged.

* * *

At the recent annual meeting of the Stove Founders' National Defense Association officers were elected for the coming year as follows: President, George Mitchell, Pittston, Pa.; first vice-president, Lewis Moore, Joliet, Ill.; second vice-president, Joseph L. Anthony, Taunton, Mass.; secretary, Robert W. Sloan, Pittston, Pa.; treasurer, William A. Dwyer, Detroit, Mich.

* * *

Samples of the company's high-grade roofing plate, mounted on a celluloid holder to be hung on the wall or desk have recently been distributed by the Merchant & Evans Co., Philadelphia, Pa. These samples comprise sheets 5 by 7 inches, separated with heavy paper, on which there is information relative to the company's several products. For example, the first sheet contains the following: "These samples of 'Merchant's Old Method' and of four other of the better known brands of our terne plates are presented, so that

choice may be made from sections of actual sheets of the brand best suited to the needs of any case. High Grade Terne Plates today are better made than ever before, and the popularity of Tin Roofing, after a period of decline, has greatly increased in the past two or three years, because the owner has come to know that Tin Roofing is the most durable, longest-lived, cleanest, best looking, lightest and safest protection against fire, lightning and the elements. Moreover, tin is not a specialty, and can be obtained anywhere at any time for repairs and extensions."

* * *

B. J. Sigmund, the Philadelphia representative of the Trussed Concrete Steel Company, says now is the time to build a house, factory or store. What, you cry, with these high prices of labor and materials? Yes, says he, because you will find them dearer in the future. Mr. Sigmund gives me his reasons for thinking that labor will be exceedingly scarce when the war ends. He figures that the amount of rebuilding in war-torn Europe will be stupendous and will keep at home all available labor. That would mean a continuation of our labor famine in the United States, and consequently a high price for work. The Napoleonic wars cost Europe 5,000,000 men. It is estimated that if this war continues two years more it will cost the world 15,000,000 men—not all killed in battle, but from a decrease in births and all causes combined.

* * *

A strong desire for a national publicity campaign in the interests of tin roofing was in evidence at the sixth annual meeting of the Metal Branch of the National Hardware Association held in Pittsburgh, Pa. The attitude of the jobbers as expressed is more than one of waiting on the manufacturer. The Philadelphia jobbers have led off in their campaign, and regardless of the attitude of the manufacturers they are to continue it.

* * *

The annual meeting of the National Association of Stove Manufacturers was held in Chicago. The incoming officers as elected are as follows: President, Frederick Will, Sill Stove Works, Rochester, N. Y.; first vice-president, Lee W. Van Cleave, Buck's Stove and Range Co., St. Louis, Mo.; second vice-president, Robert Leach, Weir Stove Co., Taunton, Mass.; treasurer, Charles F. Mertz, Co-operative Foundry Co., Rochester, N. Y.; secretary and cost expert, F. J. Stephenson, Hoosick Falls, N. Y. The Executive Committee consists of the following, together with President Will and Secretary Stephenson: Charles A. DuCharme, chairman, Detroit, Mich.; Joseph W. Emery, Quincy, Ill.; Richard E. Warner, Taunton, Mass.; Russell E. Sard, Albany, N. Y.; George D. Wilkinson, Chicago, Ill.; Frank S. Ouerbacker, Louisville, Ky.; James A. Lansing, Scranton, Pa. New York City was chosen as the convention city for 1918.

* * *

So many automobiles are shipped to Philadelphia dealers that the railroad companies

have been compelled to make special provisions for unloading them. The Pennsylvania Railroad Company, for example, has under construction at Thirty-first and Chestnut streets, an auto platform twenty feet wide and approximately 400 feet long. This platform will be provided with an incline at both ends.

* * *

The annual percapita fire waste in the United States is \$2.51, in Europe 33 cents. Cause: The latter has better construction, less carelessness, increased responsibility.

* * *

An office has been opened in Detroit by the J. M. & L. A. Osborn Co., Cleveland, Ohio, on the fourth floor of the Builders' and Traders' Exchange. It is in charge of J. G. Henninger.

* * *

According to an estimate prepared by the Council of National Defense the total amount of lumber that will be required for war purposes will reach astounding figures. The construction of the army cantonments will require approximately 500,000,000 feet; the wooden ship building program will take 400,000,000 feet; the navy training camps, 200,000,000 feet, and aviation school buildings, 120,000,000 feet. The construction of military wagons, gunstocks and various other war munitions will also require a large amount of lumber. While these figures are imposing the Federal requisition is practically only about five per cent. of the production of a single year, so there is no need of fear that private interests that depend largely upon lumber will be unable to obtain adequate supplies.

* * *

A small roof section covered with shingles painted with a zinc borate paint has recently been tested as to its fire-resistant properties at the Forest Products Laboratory, Madison, Wis., after having been exposed to the weather on the roof of the laboratory for nearly three years. Other shingles freshly painted with the same paint were tested in comparison. The results show that the paint had resisted the action of the weather without losing its fire-retarding properties to any marked extent. A close examination of the exposed portion of the shingles showed that the paint was in first class condition. It was concluded, therefore, that a zinc borate paint has excellent lasting qualities, and that it retains its fire-retardant properties for at least three years.

* * *

By a mail canvass of 10,000 architects and engineers, "Structural Conservation" secured more than 2,600 replies to queries relative to integral waterproofing. More than 94 per cent. favored integral waterproofing of concrete under hydrostatic pressure, and 92 per cent. stated that their observation had shown that integral waterproofing is beneficial in filling the pores of concrete and preventing the absorption of moisture, whereas concrete not waterproofed is absorptive of moisture.

CONCRETE FLOORS WITHOUT FORMS.

No Expensive Centering and No Waste of Concrete.

Any building material that will help to reduce the cost of construction is of especial interest to the modern architect and builder.

The use of ribbed expanded metal lath such as "Chanelath" is a comparatively new thing in the building field. The increasing popularity of this type of material is directly due to the saving in wooden forms made possible by its use.

"Chanelath" is a type of expanded metal lath consisting of T-shaped ribs, $\frac{7}{8}$ of an inch high, spaced 4 inches apart and joined by a fabric of expanded metal having meshes of the same size and shape as "Kno-Burn" metal lath.

One of the purposes for which "Chanelath" was designed, is to provide a material for reinforcing concrete roof and floor slabs and at the same time provide a form for supporting the wet concrete until it has set.

The T-rib of "Chanelath" provides, in the most economical shape, the necessary reinforcement, and the expanded metal fabric furnishes the support or form for the concrete.

The meshes of the fabric are approximately diamond shaped, with a width of $\frac{3}{4}$ of an inch and length of 11-16 of an inch.

At first glance it would appear that a large part of the wet concrete would flow through the mesh and be wasted, but this is not the case.

A carefully supervised test to determine the exact amount of seepage through the mesh of "Chanelath" was conducted by the city of Philadelphia in 1916. The mix was what is technically known as "quakey," water rising easily to the surface when it was struck or patted with a shovel. It was deposited on the "Chanelath" with a No. 2 shovel, and tamped after placing with an iron tamper in the hands of an ordinary laborer.

In mixing the concrete, accurate count was kept of all the cement, sand, aggregate and water going onto the mixing board, all measurements being made with an ordinary galvanized bucket. The material left on the board and not required for the slab was carefully measured, and the different constituents pro rated according to their relative proportion in the mix. In this manner an accurate count was kept of all materials going onto the "Chanelath." The concrete that had dripped through the mesh into the pan was then carefully measured and placed in glass jars. These jars were then turned over to the Henry S. Spackman Engineering Company for analysis.

All computations on this test were made by Mr. Otto H. Gentner, Jr., consulting engineer, of Philadelphia, Pa.

The George A. Fuller Company, in response to a request of the United States Government, submitted a statement showing that the total amount of work done by the company since January 1, 1915, aggregated \$71,000,000.

(Continued on Page 408.)

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Oil Plant, Petty's Island, Philadelphia. Architect, private plans. Owners, Crew-Levick Co., Land Title Building, Philadelphia. Reinforced concrete and brick, cooper shop, barrel warehouse, tank storage and paint shop, pump house, compound tank house, domestic flier and compounding house, domestic warehouse, laboratory and sample file room, grease department and specialties department, 2 stories, 72x618 feet; dry house and wash house, 1 story, 70x120 feet, and power house, 1 story, 48x30 feet, composition or mastic roof (power plant equipment and heating reserved), electric lighting, rolled steel sash, fire doors, concrete floors, hollow tile, roof ventilators, barrel conveyors, carriers, drops and elevators. Plans about completed. Owners will build. Ready for bids on materials.

Stores and Apartments (alt. and add.), Broad and Allegheny avenue. Architect, Mahlon H. Dickinson, Bellevue Court Building, Philadelphia. Owners, Crumble Bros., on premises. Brick and terra cotta, 3 stories, 65 x160 feet, slag roof, steam heating, electric lighting, tile and marble work, pine floors, metal lath. Plans in progress. Architect ready for sub-bids in three weeks.

Dock, Pottys Island, Philadelphia. Architect, private plans. Owners, Crew-Levick Co., Land Title Building, Philadelphia. Steel or concrete or wood pilings; deck, 40x1200 feet. Owners ready for bids.

Motion Picture Theatre (alt.), Front and Girard avenue, Philadelphia. Architects, Hoffman Co., Finance Building, Philadelphia. Owners, Jumbo Amusement Co., Front and Girard avenue, Philadelphia. Brick, 1 story, consists of tearing out and altering front and interior. Plans about completed. Architects will take bids in a few days.

Stores (2) and Manufacturing Building, Allegheny and Kensington avenue. Architect, private plans. Owner, Max Serfert, on premises. Brick, 2 stories, 34x55 feet, slag roof, pine floors, electric lighting (steam heating reserved), rolled steel sash, pine floors, metal ceilings. Owners taking bids. Harry Brocklehurst, 512 W. Norris street, is figuring (only bidder).

Apartment House, Broad and Master sts., Philadelphia, \$700,000. Architect, Frederick Webber, Morris Building, Philadelphia. Owners, Pine Street Realty Co., care of architect. Stone, brick, steel and terra cotta, 13 stories, slag roof, steam heating, electric lighting, tile, marble and terrazzo work, hollow metal sash, cement, brickwood and pine floors, hollow tile, metal lath, elevators, waterproofing. Revised plans completed.

Residence, Oak Lane, Philadelphia, \$15,000. Architect, Ernest H. Yardley, 1713 Sansom street, Philadelphia. Owner, name withheld. Stone, hollow tile and plaster, 2½ stories, 35 x55 feet and 15x20 feet, slate roof, pine and composition floors (plumbing, hot water heating and electric work reserved). Plans in progress.

Convent (add.), Lehigh avenue and Cedar street, Philadelphia. Architect, Peter F. Getz, 1634 North Sixth street, Philadelphia. Owners, St. Ann's R. C. Church, care of Rev. M. A. Hand, on premises. Brick and plaster, 1 story and basement, 17x38 feet, slag roof, pine floors, steam heating, electric lighting. Architect taking bids, due June 26th. D. W. O'Dea, 5227 North Fifth street; John McShain, 1610 North street; Edmund Molloy, 2316 East Lehigh avenue, are figuring.

Dwellings (2) (alts. into Stores and Apartments) and Garages (2), 6025-29 Germantown avenue. Architect, W. F. B. Koelle, Otis Building, Philadelphia. Owner, name withheld. Store and apartments, brick, 3 stories; garages, stone, 2 and 1 story, 150x90 feet, slag roof (steam heating and electric fixtures reserved), hardwood, composition and cement floors, electric lighting, tile work, hollow metal skylights, gasoline storage system. Architect has received revised bids.

Store and Office Building (alt.), 1214 Walnut street, Philadelphia. Architect, Andrew C. Borzner, 717 Walnut street, Philadelphia. Owner, Wm. L. Ludascher, Westmoreland st. and Delaware avenue. Brick and stucco, 3½ stories, steam or hot water heating, tile and marble work, electric lighting, pine floors, metal lath, ornamental iron work. Architect taking bids, due June 21st. Specht & Sperry, Heed Building; Freund Const. Co., Bulletin Building; Stacy Reeves & Sons, 2011 Market street; Hogg Const. Co., 1634 Sansom street, and Thos. J. Carberry, 6114 Stenton avenue, are figuring.

Garage, northwest corner Seventh and Spring Garden streets, Philadelphia. Architect, Frank V. Greenstein, Empire Building, Philadelphia. Owners, Very Best Garage Co., care of M. Berger & Co., northeast corner Seventh and Green streets, Philadelphia. Reinforced concrete and brick, 4 stories, 76x88 x115 feet, slag roof, steam heating, electric lighting, rolled steel sash, hollow metal skylights, fire doors, cement and parquetry floors, metal lath (2) elevators, waterproofing. Owners taking bids, due June 21st. Thos. Reilly, 1616 Thompson street, is figuring.

Club House (alt. and add.), Ranstead to Ludlow, between Nineteenth and Twentieth streets, Philadelphia. Engineer, F. H. Shelton, 1714 Delancey street, Philadelphia. Owners, Plays & Players Club, 43 South Eighteenth street, Frederick H. Shelton, chairman building committee; H. B. Schaeffer, Jr., secretary, 43 South Eighteenth street, Philadelphia. Brick, steel and plaster, 1 story, and balcony, 96x104 feet, slag roof, maple floors, marble and tile work, metal lath, fire escapes (plumbing, heating and lighting reserved). Owners taking bids. H. E. Grau Co., 1707 Sansom street, are figuring.

Warehouse, 1017 Callowhill street, Philadelphia. Architect, S. K. Neubauer, 1118 Chestnut street, Philadelphia. Owners, R. A. Humphry's Sons, 1021 Callowhill street. Brick,

steel and concrete, 1 story, 20x120 feet, slag roof, cement floor, electric lighting, steam heating. Architect has received bids.

Garage (alts. and add.), 116 Queen street, Philadelphia. Architect, D. A. Supovitz, 1118 Chestnut street, Philadelphia. Owner, A. Milles, on premises. Brick, 1 story, 36x99 feet, consists of general alterations, new brick walls, slag roof, cement floors, electric lighting, gasoline storage system. Architect will take bids in about one week.

Theatre, Studio, Stores and Office Building, Broad below Locust street. Architects, not announced. Owners, David Berg, Samuel Tauber and Philip Publiker, care of Bernheimer & Sundheim, 1001 Chestnut street, Philadelphia. Theatre, 80x10 feet; lobby, 20x60 feet; office building, 10 stories, 90x60 feet, reinforced concrete, brick, steel and terra cotta. Plans in progress. Owners will take bids in a few days.

Apartment (alt. and add.), 1626 N. Broad street, Philadelphia. Architect, Francis G. Caldwell, Stephen Girard Building, Philadelphia. Owner, Wm. C. Benkert, Morris Building, Philadelphia. Brick, 3½ stories; fire tower addition (heating reserved), tin roof, electric lighting, tile work, pine floors, ornamental iron work. Architect has received bids.

Warehouse, 1335 Colona street, Philadelphia, \$5,000. Architect, private plans. Owners, Enterprise Mill and Soap Works, 2229-33 North Twelfth street. Brick and steel, 2 stories, 16x75 feet, slag roof, maple floors. Thomas Reilly, 1616 Thompson street, is taking sub-bids.

Garage, Ridge avenue and Lemon street, Philadelphia. Architect, private plans. Owners, Brilliant Mfg. Co., care of Chas. P. Ray, 1035 Ridge avenue. Brick and steel, 1 story and basement, 168x38 feet, slag roof, steam heating, cement floors, rolled steel sash and skylights, fire doors, metal lath, roof ventilators (electric work and gasoline storage system reserved). Owners have received bids.

Foundry Building, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Govt., Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Hollow tile, steel, 1 story, 456x180 feet and 64x180 feet, asbestos roof (heating, plumbing and lighting separate bids), concrete floors, rolled steel sash, fire doors, metal lath, metal window guards, ornamental iron work. Low bidders: Building, 1 story, 456x180 feet, Warren-Moore Co., \$387,103.27; McCloskey & Bahl, \$304,246.07; building, 1 story, 64x180 feet, McCloskey & Bahl, \$555,152.71; Warren-Moore Co., \$538,196.60.

Storage Building, American and Huntingdon streets, Philadelphia. Architect, private plans. Owners, Trussed Concrete Steel Co., Commonwealth Building, Philadelphia. Brick, 1 story, 50x90 feet, slag roof, cement floors, electric lighting, rolled steel sash, fire doors. Owners will build. Ready for sub-bids.

The Answer

"Yes, Mr. Builder," said the prospective house buyer, "your house looks fairly complete." But what provision have you made for giving me quick heat in the mornings and evenings of the late Spring and early Fall when it isn't practical to have the house heating system going?"

"We've provided the only practical and economical method," replied the up-to-date builder.

"You'll find one of these Base-board Gas Outlets in each room, to which you can connect a gas heating stove quickly and have the desired heat immediately."

Ask our New Building Representative for details.

Contract awarded to Jas. L. Robinson Const. Co., 218 East Lexington street, Baltimore, Md.

(Continued from Page 399.)

Owing to the general slackening of building operations in this territory the structural steel market is correspondingly less active. The industry is well booked up with orders for future deliveries, but the current business has been slower than it has been for a long time. Railroad buying continues to be one of the features of the market, but this business is limited to supplies immediately necessary for bridge improvements and general repairs. The fabricating mills are from three to eight weeks behind in their deliveries and hesitate to accept new orders because it is not yet fully determined what the Government requirements will be. A number of important producers of steel products have recently announced that they will construct extensive additions to their present plants. In some instances the capacity of existing plants will be almost doubled and in all cases the extensions will be such as will increase manufacturing facilities to a large extent.

* * *

Announcement has been made recently that the millions of feet of lumber required by the Government for the construction of cantonments for troops will be supplied at from \$3 to \$5 a thousand below the prevailing prices. This is the agreement recently arrived at between the lumber interests and the Council

of National Defense. The lumber committee of the Council explained that the basis on which the low prices are secured is one of informal arrangements assuring a maximum price varying according to the cost of production in different sections of the country. The contracts will be issued on a "cost plus" basis. Twelve million feet, board measure, will be required for each standard cantonment unit of twenty-five thousand men. The total which will be needed for all Government undertakings, including the Shipping Board's program, aviation school buildings, navy requirements and other purposes will be approximately 1,500,000,000 board feet.

* * *

The United States Steel Corporation has purchased from the Newark Factory Sites, Inc., through Joseph P. Day, a tract of sixty acres in the Hackensack Meadows on Newark Bay as a site for a ship yard to be used by the American Bridge Company for the construction of steel bottoms. The property has a frontage of about half a mile on the Hackensack River and runs back 1,400 feet to Hackensack avenue, where the frontage is 1,200 feet, adjoining the Newark branch of the Jersey Central Railroad. While the exact plans of the corporation have not yet been announced, it is rumored in the steel trade that the rapid construction of standardized cargo boats ranging from 5,000 to 8,000 tons dead weight, is being contemplated.

* * *

The Chamber of Commerce of the United States has a cheerful message for those who have been worrying about the reported inadequacy of the food supply. Its Committee on Statistics and Standards reports that with favorable weather from now on the total winter wheat yield may somewhat exceed the harvest of last year. At this stage of the growth of the spring wheat crop, all that can be reasonably said is that the law of chance was for a greater production than last season. If, however, we should not have as much wheat to export as would be necessary, there seems a strong probability that we shall have other available food supplies, such as corn, oats and potatoes, not only in full measure, but running over.

Owing to the large number of fatalities attributable to preventable accidents in building and construction work, the New York State Industrial Commission recently undertook the important work of formulating a Safety Building Code. There is need for some further legislation of this character in order to reduce the number of men maimed or killed each year in accidents occurring during the erection of new structures. According to the statistics recently compiled it is shown that many workmen are killed annually in the building and construction business, whose death is directly traceable to carelessness in some form or other, than are fatally injured in factories, although the number of factory operatives greatly outnumber the workmen employed in the construction lines. The accidents in construction work are in no wise due to the fact that there are not a sufficiency of legal safeguards existent, but almost wholly for the reason that the mechanics employed in structural work are notably careless and willing to take more chances than the natural hazards of the work make necessary, and also because the contractor, superintendent or foreman on the job disregards the sections of the Labor Law that provide for the safety of the workmen. The law is mainly ignored in order to save time or economize in the expense involved in providing the required safeguards, or both.

Technical Notes and Practical Recipes

Aluminum Alloy.

A French engineer has patented an alloy of aluminum which is said to admit of being cast, worked, or tempered in the same way as steel. For the preparation of this metal preliminary alloy is prepared containing cobalt, nickel, tungsten, silver, magnesium, and aluminum. About 10 per cent. of this alloy is incorporated with 90 per cent. of aluminum to make the new compound.

* * *

Tempering.

Twist drills, taps, dies, small punches, and other similar articles of cast steel may be effectively tempered by the following process: Equal parts of prussiate of potash and common salt are mixed in a clean iron pot over a fire until the mixture boils and assumes a cherry-red color. The tool is to be inserted into this molten compound until it also has assumed the same color; the tool may be left in as long as desired. When the tool is taken out it has to be cooled in water or linseed oil in a vertical position. For taps or dies it is best to let the tool down to dark straw.

* * *

Strength of Castings.

It is a singular and a very striking circumstance that the strength of cast iron can be increased by the simple operation of knock-

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

ing the castings about. Mr. A. E. Outerbridge, Jr., has found that by the repeated action of light blows the tensile strength of the casting can be increased. The explanation, of course, is assumed to be that the repeated shocks relieve the internal strains and permit the full tenacity of the metal to be developed. It has long been known that cast metal bars tested some months after they have been made are appreciably stronger than if tested when newly cast.

THE SELECTION OF MILLWORK.

While "milwork," as the contractors understand it, finds no place in the modern dictionaries, it is still a real and vital subject to be taken up by the builder of the home. The appearance of the millwork, or trim, which also includes the doors and windows, stairs, and the mass of built-in features generally found in the modern home, goes a long ways toward the owner's satisfaction with the job. It is even more important when considered from the standpoint of the contractor who builds a house to sell or rent. Unless the appearance is right, there is trouble for everyone.

Of course, a good job of millwork would not make up for a poor job of painting or plastering, and the finest millwork cannot cover the defects of a poorly designed building. But, other things being equal, the millwork is one of the most important features of the building.

The millwork furnishes practically everything seen in the interior of the house, except the floors, walls and ceilings. In the matter of windows and doors, millwork forms the working or moving parts of the house, and in such places is subject to both wear and careful scrutiny from those who enter the home.

The contractor must therefore view the millwork as the one feature which will make or mar his reputation. Often the contractor who may have slipped up on a number of items all through the job can recover his prestige by a good job of millwork. While not intended to hide real deficiencies, it still has possibilities which every contractor must recognize.

But with all that, millwork requires something from the contractor. In the first place, he must know just what he is going to do all through the job, and must select his millwork with the greatest care, having in view the ultimate purpose of the building. He must consider the cost of finishing the work in the manner best calculated to bring out the best appearance while giving it the required protection from deteriorating influences.

Millwork, being a finishing material, lacks the property of adding strength to the building. All this must be provided for by the framework, and unless the contractor brings the building up to that point in suitable

shape, the best job of millwork will not appear at its best or remain the work of art which it otherwise would be.

So, why not consider the millwork as the crowning achievement of the builder's art? It really is that, for, used as a base, the finest decoration is applied to it. When the design of the millwork is right, the decorator has a wide field to exercise his skill on, using the millwork as part of the scheme, as borders, etc. The millwork must be right in material, design and erection before these results can be achieved.

With all the limitations as regards workmanship, the contractor has practically unlimited facilities to draw upon in the way of materials and design. Several beautiful woods are available in almost limitless quantities, and their general properties are such as to make them ideal for millwork. Manufacturing processes bring out the finest qualities in these woods, both as regards appearance and durability. Taking just one wood, oak, there is a wide difference between the quarter-sawn and the plain, and yet the actual difference in cost is slight, and the durability is sufficient in either case. Again, consider birch, which may be stained to represent almost any high-priced wood, or which furnishes an excellent base for painted or enameled work. Every wood has some advantages, and many have qualities which, but for the abundance of the wood, would make the material exceedingly valuable.

The first care of the contractor should be to select a wood satisfactory from the point of utility. Next should be considered the permanency of the wood under the conditions of its use. Third, the appearance of the wood when finished in any of the many ways known to the painter and decorator. Fourth, the item of cost should not be overlooked, as this often influences the owner more than it should.

The contractor should consider the suitability of the wood for the place where it is to be used, the stock sizes in which the materials are made up, the variety which may be obtained by suitable arrangements of the standard shapes and mouldings. He must know something about manufacturing methods, which are suitable for veneers and which should be used solid, which will stand exposure to the weather, such as for outside doors, sash, and all the like.

Above all, the contractor should have samples of the various woods in general use in his locality, finished in as many styles as possible, so that he can show them to the owners who consult him. As soon as the knowledge gets around that a contractor has these samples he will be consulted by those who want something a little different at no increase of cost.

Keep posted on millwork, for it will be the means of securing many fine contracts. It will preserve the contractor's reputation about as well as any item about the building.

Permits for New Buildings

Garage, 2420 W. Allegheny avenue, \$400. J. Nicholas (O), on premises. Chas. L. Gum (C), 2546 N. Twenty-ninth street. Brick, 1 story, 10x15 feet.

LUMBER YARDS

Third and Girard Avenue, Philadelphia

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

Bricklayers, Masons, Plasterers

DO YOU

use the hod carrying method of elevating brick, mortar, cement, etc.? It's too old

fashioned—too slow and costly—for present day building work.

"LITTLE GENERAL" MATERIAL ELEVATOR HOISTS are used by dozens of bricklayers in Philadelphia who used to rely on the hod carrier method which was expensive and unsatisfactory. Now they use a "LITTLE GENERAL" and save money.

One man to load the elevator, one man to distribute the barrows and one man at the hoist will keep fifteen bricklayers hustling.

Elevator operates in an opening 26" x 60".

Easy to erect, easy to take down and move, convenient to store.

Write for prices and special discount.

As The Editor Sees It

THAT conditions are rapidly veering back to normal in the building trades is evidenced by a review of the situation in *The New York Real Estate Record* of June 16th. Under the heading of "Improved Building Outlook," the writer remarks:

"Although the last few weeks have been more or less discouraging from the standpoint of the architects, contractors and building trades generally, there now seems to be a decided indication that the clouds of depression that were hanging low, are lifting and that brighter and better times are in store for the construction interests. The current week has witnessed a notable improvement in the building situation, particularly throughout the Eastern section of the country. Reports from authentic sources, received from various parts of the country, as well as from the territory adjacent to New York, are more optimistic and shows a much better condition than has maintained.

"Probably the greatest factor responsible for the changed outlook is the widespread influence of the large amount of building work lately undertaken by the Government. Private building interests are gradually revising their mental attitude in regard to the building situation and are approaching a feeling that if the Federal authorities can afford to proceed with construction on such a gigantic scale there is no valid reason why they should further postpone the contemplated operations that have been in abeyance for some time. Substantially all branches of building construction have felt the effect of the movement. Private house construction, in particular, is evidencing increased activity. This type of building includes both the modest dwelling and more pretentious residences for wealthy owners. The erection of factories and commercial structures is proceeding in a most satisfactory manner and new operations of this character are being announced daily."

* * *

THERE is a firm demand for new and modernized structures. This demand will have to be satisfied if business is to run along as usual. While there was some hesitancy in the weeks immediately following the declaration of war the feeling is growing steadily that economic and financial affairs are rapidly becoming stabilized and that this nation will experience an era of unusually good business that might almost amount to boom times.

"The prices of building materials are gradually settling down to a stable basis. During the last two weeks there have not been nearly so many fluctuations in prices, and while there is no likelihood that the costs of building materials and supplies will be greatly reduced for a long time the feeling is prevalent that the upward movement has about ended. Under these conditions the prospective builder is in a better position to commence operations, as he will be more certain as to the final cost of the completed structure. The uncertainty involved on account of the recent market situation has been one of the principal deterrents to building."

* * *

DISCUSSING more intimately the general drift of building conditions the same authority observes:

"Considerably more optimism is evident in the building and allied industries this week than has been noticed for some time past. The feeling seems to be gaining in strength that the worst of the recent depression in the building situation has practically ended and from now on, all other things being equal, the conditions will be substantially improved. Quite a number of important projects have come to light during the past week. Some large contracts have been awarded and there is a better showing of jobs figuring. The great majority of these operations are manufacturing and commercial structures, semi-public or community buildings, and a sprinkling of costly residences. The erection of small dwellings, both for private ownership and on speculation, is progressing in a fairly satisfactory manner and the reports that are being received from the suburban sections indicate that the 1917 building season is well advanced and also that the volume of the work is to be considered almost normal. The high prices quoted

for fabricated steel and the length of time necessary for the delivery of this commodity are factors that are holding up the construction of steel skeleton buildings that might otherwise go ahead. Other branches of construction work are much more active than they were two or three weeks ago. The award of new Government contracts for erection of buildings at the army cantonments has exerted an important influence on the building trade. Many of these structures are already started and others

and I am glad that you have written to us as you did.

I wish we could have an opportunity to discuss this personally, but in lieu of this possibility in the immediate future, the best explanation I can make is that we have been doing all possible for the public welfare in the way of developing an effective fire retardent for the shingle roof, and our plans contemplate continuance and enlargement of this work to the extent of the available resources. Everything centers around Dr. von Schrenk's investigation in St. Louis, and you will understand the difficulties connected with such tests and the long time required to bring them to satisfactory conclusions.

I had the pleasure of spending several days with Dr. von Schrenk in St. Louis a couple of weeks ago, and was very much pleased at the progress he has been able to make. I much prefer that he inform you as to the details, and am going to send him a copy of this letter, so that he can do so. In the meantime, I can safely say that the prospects for putting a satisfactory fire retardent compound on the market in the near future are very encouraging. You will appreciate, however, that it would be very inadvisable to take any premature action, and that no paint should be approved or advocated which has not been very thoroughly tested. It would be extremely helpful and interesting if Mr. Woolson and Mr. Booth could arrange to visit Dr. von Schrenk in St. Louis, and see the work he is doing. As the invitation has been extended and accepted I should think that the remaining step would be to arrange a date, which no doubt Dr. von Schrenk would be glad to do.

We keenly appreciate your attitude on this whole situation. You may be sure of the sincere and extensive interest of the lumber industry, and while progress has been slow, I am personally hopeful of an ultimate solution. In a recent letter to our Board I pointed out that the Atlanta fire again emphasizes the need of a shingle fire retardent which can be put on the market at an early date. I know that Dr. von Schrenk in developing the details of this work is anxious to co-operate closely with your organization, and you will no doubt hear from him as to the latest developments.

Vary truly yours,

E. A. STERLING,

Manager.

* * *

IF any paint can be devised, the application of which will render the shingle fireproof, or even fire-retardent, in the proper sense of this much-abused term, too much publicity cannot be given to the advent of a dis-

covery so fraught with importance to insurance men, builders and the building trades.

Considering the picturesque qualities of the cedar shingle, its cheapness compared with other materials, and its durability from the weather-wearing point of view, there can be no question that it serves as a dangerous carrier of the flames in contact with conflagration. This has been so effectually and so repeatedly established under test as to stand beyond dispute. For years invent-

ive minds have been busy with formulas designed to render the shingle fire retardant. Every now and then some manufacturer comes forward with a paint supposed to have the properties to bring about this much-desired condition. To date all have been failures under practical test. If Dr. von Schrenk is on the trail of the right combination, he will deserve to be hailed as a public benefactor. We shall await further and more detailed reports from the von Schrenk laboratory with much interest.

EDITORIAL NOTES

Braemer Air Conditioning Corporation, Philadelphia, Pa., announces that John F. Hale has become identified with the corporation in an official capacity, with headquarters in the Lafayette Building, Philadelphia. The arrangement became effective May 1. Mr. Hale has been identified with the heating and ventilating business since 1893, and during the last 20 years has been with Warren Webster & Co., of Camden, N. J., as assistant general manager, and with the Consolidated Engineering Company, of Chicago, as vice-president and general manager. During this time, eleven years were spent with Warren Webster & Co. and nine years with the Consolidated Engineering Company.

* * *

E. F. Houghton & Co., Philadelphia, Pa., have sold their heating and engineering department to the Bishop-Babcock-Becker Company, Cleveland, Ohio. The retirement of the Houghton Company from this field, it is stated, is due to the impossibility of obtaining machines and special tools and the scarcity of raw materials and labor.

* * *

Frank Y. Low and N. P. Zech, who have been associated for many years with H. M. Byllesby & Co., have become associated with the General Engineering and Management Corporation, New York. Mr. Low has been elected president and director, and Mr. Zech, vice-president.

* * *

The Atlantic Radiator Company, Huntington, Pa., has moved its main offices to New York, the new headquarters being located at 35 West Forty-second street. The accounting and sales departments are now located in the New York quarters, which contain also the offices of President Richard C. Schwoerer and of Vice-President Howard T. Gates. Assistant Secretary Alfred W. Smith will remain in charge of the company's plant in Huntington.

* * *

The National Housing Association will hold its annual meeting at Chicago October 15-17, 1917. Headquarters, Hotel La Salle. For information inquire of Lawrence Veiller, secre-

tary, 105 East Twenty-second street, New York City.

* * *

S. Louis Barnes, former president of the National Association of Master Plumbers, died at his home in Germantown, Philadelphia, from cerebro-spinal meningitis. Mr. Barnes was president of the National Master Plumbers' Association at the time when it was under the most extensive Government prosecution and became well-known for his efforts in maintaining the integrity of the organization.

* * *

The American Society for Testing Materials will hold its twentieth annual meeting at Atlantic City, at the Hotel Traymore, June 26 to 30, inclusive.

* * *

Officers were elected as follows at the annual convention of the New York State Association of Master Steam and Hot Water Fitters, held in Albany: President, John R. Sheehan, Schenectady; vice-president, H. J. Brandeles, Utica; secretary-treasurer, W. J. Olvany, New York; corresponding secretary, Henry B. Gomers, New York; sergeant-at-arms, W. T. Cantwell, Utica. The new directors are: C. Ashmunsen, Albany; W. F. Deven-dorf, Rochester; John J. Doherty, Poughkeepsie; W. T. Lane, Buffalo, and E. F. Joy, Syracuse. A dinner at the Hotel Hampton followed the close of the convention.

* * *

Equitherm Control Corporation is the new name of the Geissinger Regulator Company, New York. The company's main office is 30 Church street, New York, and its factory at 203 Greenwich street.

* * *

At a meeting of the Board of Directors of the National Association of Master Steam and Hot Water Fitters it was voted to temporarily postpone the convention of the association, which was to have been held in Chicago, June 11-14, with headquarters at the Hotel Sherman. This action was taken "on account of the uncertain conditions brought about by our country being in a state of war."

* * *

Richmond Radiator Company, New York,

has announced a wage increase of 10 per cent. The advance applies to about 500 employees at the company's plant in Uniontown, Pa.

* * *

"Automatic Control as Applied to Heat Regulation" was the principal topic for discussion at the May meeting of the Eastern Pennsylvania Chapter, held at the Engineers' Club, Philadelphia, May 10. S. E. Plewers presented the subject and exhibited models of improved present-day devices, illustrating the great advances made in recent years. Mr. Plewes attributed the "positive reliability" of modern automatic control, as distinguished from manual control, to the highly-developed design and special materials now used in the manufacture of temperature-regulating devices.

* * *

A. D. Granger Company, New York, dealers in power plant machinery and contractors for steam and electrical equipments, announces the removal of its offices to the Park Row Building, 15 Park Row.

* * *

Industrial Service and Equipment Company, Boston, Mass., announces the removal of its offices to 226 Devonshire street.

* * *

National Exposition of Safety and Sanitation will be held in the Grand Central Palace, New York, September 10-15, under the joint auspices of the American Museum of Safety and the National Safety Council.

* * *

National Paint, Oil and Varnish Association will hold its convention at the Congress Hotel, Chicago, Ill., October 7-11. George V. Horgan, 100 William street, Manhattan, is secretary.

* * *

American Radiator Company's employees have donated an ambulance to the American ambulance corps in France.

* * *

New freight service by water between New York and New England ports has been established, and the first ship will arrive in New York next Tuesday. Cargoes will be delivered by this line at Providence, Fall River, Pawtucket, Attleboro, Warren, Taunton, Bristol and New Bedford, and it is planned to have daily sailings soon. Business men believe the new line will help relieve the railroad freight congestion about New York.

* * *

For the first time in the history of the United States Treasury receipts have exceeded \$1,000,000,000 in the fiscal year, the total to date being \$1,015,381,000, to compare with \$660,400,953 last year. Most of the increase is due to the doubling of the income tax.

* * *

A report presented to the National Physical Laboratory at its annual meeting declares that the Tower of London is sliding into the Thames. "Observations on the growth of cracks in the buildings of the tower, have been continued," the report says. "There have been no serious disturbances, but careful

examinations have revealed that movements of the wall have taken place, presumably in the nature of a slide toward the river of the whole block of masonry." It is further explained that the entire fabric of the structure moves appreciably with the rising and falling tide, making it impossible to carry out certain operations needing delicate equilibrium.

* * *

The Federal Trade Commission will be asked soon by William Denman, president of the Emergency Fleet Corporation, to fix a uniform price for steel and steel products for all industries throughout the country. The Commission will be asked to name a fair price which will afford the producers a fair profit not only on steel but on pig iron, iron ore and every other material entering into the manufacture of steel. The method of procedure will be for the Commission to suggest to all iron and steel manufacturers and ore producers that they unite and name a price themselves, subject to the Commission's approval. Should they decline the Government has the power to commandeer the plants. With the Government obtaining its steel for the proposed fleet of ocean-going vessels at a comparatively low price, it is feared unless some restrictive action be taken, the price of steel and iron to other industries will attain unheard of levels within a short time. That, it is pointed out, might be brought about by the natural law of supply and demand, as the Government's requirements when filled would leave an inadequate supply for other industries.

* * *

The United States Cast Iron Pipe and Foundry has advanced prices of pipe \$2 per ton, effective at once. This is a total of \$5 per ton in the last ten days. Prices of 4-inch pipe are now \$62 per ton, of 6-inch pipe \$59 per ton, and of 12 inches and upward \$55 per ton Burlington foundry, \$1.50 freight rate to New York.

* * *

A steel manufacturer says: "The steel trade will make a protest against efforts on the part of Washington to force sales of steel to the Government at almost cost level. Low Government steel prices would be bound to interfere with the steel industry. Many domestic consumers are already holding off purchases pending definite advices from Washington as to the attitude of the Government toward the steel industry."

* * *

Cramp & Co. have commenced work on naval militia barracks on the Henry Ford farm at Cape May, N. J., which will cost between \$500,000 and \$1,000,000.

* * *

The argument that the Government should pay less for an article than is paid by the general public rests on a single premise, that of patriotism. It is illogical and disputes the law of supply and demand. Here is a case in point. The maker of ship plates sells his plates to a private shipbuilder for \$100 a ton. He is asked to sell to the Government for \$50

a ton. Adjoining the manufacturer of ship plates is a manufacturer of toilet articles who has nothing to sell to the Government, but who enjoys unusual prosperity because his profits are 100 per cent. higher than they were a year ago. One manufacturer is penalized, while the other is permitted to reap a harvest. The stockholders of the steel plant are subject to double taxation, for they not only submit to a regular corporation tax, but also submit to a lowering of their profits by 50 per cent. The stockholders of the other concern reap all the benefits of high prices and pay only one tax. Business cannot be stabilized on such principles.

* * *

There is some indication that a number of the brainiest business men of the country, now serving the Government without compensation on sub-committees of the National Council of Defense, are discouraged with the conditions under which they are compelled to work. Word has reached the financial district indirectly that there is apt to be a shake-up in the Council in order to give these big men an opportunity to work effectively. There is at present a clash of authority in Washington, it is said, which engenders misunderstanding and hard feeling. It can hardly be expected that the industrial leaders of the world shall give up their time and efforts when these services are not appreciated by the Government.

* * *

One particular point of grievance lies in the price-fixing department of Washington. It appears that recommendations made by the experts assigned to various departments are overridden every day by Administration officials who have no expert knowledge of the subjects concerned. Thus a steel expert will fix the price of ship plates only to have a civilian official cut the proposed rate in half. The solution which is suggested for this situation is to appoint an arbitrary price-fixing board of experts and to make this board entirely independent of the National Council of Defense and also of the Army and Navy Departments.

* * *

The market for fabricated steel for building purposes is slacker than it has been for a long time. Practically no new contracts for the construction of office and loft buildings or other steel frame structures have been let and there are but few operations of this character in immediate prospect, although the building situation is generally improved. The high price of fabricated steel and the difficulties experienced in obtaining prompt deliveries have been influential in taking a number of important structures out of the market that might otherwise have been erected. At the present writing the pending Government work looms up as the most important factor to the structural steel industry. During the last week a number of contracts for the steel required in the construction of new buildings at navy yards, shipyards and dsimilar work have been placed.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Schools (various), Philadelphia. Architect, J. Horace Cook, Nineteenth, above Chestnut street. Owners, City of Philadelphia, Board of Education, William Dick, secretary, Nineteenth above Chestnut street, Philadelphia. Consists of general repairs and alterations, painting, equipment, sanitary improvements, repairs to radiators, boilers, etc. Owners ready for bids, due July 5th at noon.

Warehouse (add.), Broad and Washington avenue, Philadelphia. Architects, Rankin, Kellog & Crane, 1012 Walnut street, Philadelphia. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Brick, stone and reinforced concrete, 7 stories, 92x131 feet, concrete floors, elevators, fire doors, waterproofing and dampproofing (heating, plumbing and electric work reserved). Plans in progress.

Marine Barracks, League Island, Philadelphia. Architects, Rankin, Kellog & Crane, 1012 Walnut street, Philadelphia. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Brick, stone and concrete, 3 stories. Plans in progress.

Toilet and Washroom, Third and Allegheny avenue, Philadelphia. Architects, Andrew J. Sauer & Co., 908 Chestnut street, Philadelphia. Owners, Bernstein Manufacturing Co., on premises. Brick, basement addition, 28x34 feet, steam heating, cement floors, metal lath, plumbing (electric work reserved by owners). Architects taking bids, due June 28th at noon. Conneen Const. Co., 1737 Filbert street; Freund Const. Co., Bulletin Building; Smith-Hardican Co., 1606 Cherry street, and Daniel J. McNamee, 1621 North Fifteenth street, are figuring.

Cabin (D 5), Gray's Ferry Road, Philadelphia. Architects, Maintenance of Way Department, Room 361, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Hollow tile and stucco, 2 stories, 18x14 feet, slate roof, cement floor, ornamental iron work. Owners, care of J. H. Gumbo, superintendent, Thirty-second and Powelton avenue, taking bids, due July 2nd at 10 A. M. Specht & Sperry, Heed Building; Bailey-Lush Co., 201 North Broad street; J. Sims Wilson Co., 1125 Brown street; Graham-Campion Co., Otis Building; James H. Wells, Otis Building; H. E. Grau Co., 1707 Sansom street; Roydhouse-Arey Co., 201 North Broad street; Irwin & Leighton, 126 North Twelfth street; Robbins Contracting Co., Lafayette Building; Wark-Yardley Co., 1737 Filbert street; Abel Bottoms & Sons Co., 3611 Walnut street; Monaghan & Losse, 3016 Chestnut street; John N. Gill & Co., Otis Building; Fred A. Havens & Co., 845 North Nineteenth street; John V. Speth & Co., 1714 Sansom street; Driscoll Co., Stock Exchange Building; Mitchell Bros., 2125 Race street; Metzger & Fisher, Otis

Building; Charles McCaul Co., 1713 Sansom street; E. E. Hollenback, Inc., 1804 Brandywine street; Armstrong & Latta, Land Title Building; Brann & Stuart, Commercial Trust Building; A. L. Carhart, Hale Building, and Lincoln H. Smith, Hale Building, are figuring.

Residences (26), 900 North Sixty-fourth street, Philadelphia. Architect, private plans. Owners, Moss & Taylor, 560 North Fifty-eighth street, Philadelphia. Stone, 3 stories, 17x48 feet, slate and tin roof, central plant steam heating, combination lighting, tile work, hardwood floors. Owners sub-letting. Work about to be started.

Factory, Philadelphia. Architects, Stearns, Woodnutt & Schmoll, Stephen Girard Building, Philadelphia. Owner's name withheld. Brick (fireproof), 2 stories. Plans in progress. Architects will take bids in two weeks.

Garage (add.), 420 North Fifty-third street, Philadelphia. Architect, Edw. F. Gorman, Fifty-second and Arch streets, Philadelphia. Owners, West Park Garage, care of George H. Bardsley, 420 North Fifty-third street. Brick, 1 story, 80x80 feet, slag roof, electric lighting, cement floors. Plans completed. Owner will build.

Central Library, Nineteenth to Twentieth, Vine to Wood streets, Philadelphia. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owners, City of Philadelphia, care of Librarian John Ashhurst, Thirteenth and Locust streets, Philadelphia. Limestone and granite, 3 stories, 207x328 feet, tile, slag and copper roof (steam heating, electric lighting, plumbing and ventilating separate bids), passenger elevators (4), freight and book elevators (6), marble, tile and cork floors, kalamein sash, steel doors, waterproofing and dampproofing, metal lath. Architect taking bids, due July 12th at 2 P. M. (revised). George A. Fuller Co., Widener Building, Philadelphia, and Thomson-Starrett Co., 49 Wall street, New York City, are figuring.

Warehouse, Philadelphia. Architect, private plans. Owner's name withheld. Reinforced concrete and brick, 5 stories, 115x208 feet, slag roof (heating, lighting and plumbing reserved), pine and maple floors, rolled steel sash, fire doors, 6 elevators. J. Sims Wilson, 1125 Brown street, is taking sub-bids.

Factory Building, 516-26 Locust street, Philadelphia. Architects, Bunting & Shrigley, 603 Chestnut street, Philadelphia. Owner, Edward T. Biddle, 3408 Powelton avenue, Philadelphia. Brick, 1 story, 88x101 feet, slag roof, cement floors, plumbing, hollow metal sash (heating and lighting reserved by the owner). Architects taking bids, due June 29. Warren, Moore & Co., Commercial Trust Building; Barclay White & Co., 1713 Sansom street; Smith-Hardican Co., 1606 Cherry st.; Driscoll Co., Stock Exchange Building; H. C. Rea Co., 1314 Arch street; J. Sims Wilson Co., 1125 Brown street, are figuring.

Apartment House (alts.), 2225 North Broad street, Philadelphia. Architects, Andrew J. Sauer & Co., 908 Chestnut street, Philadelphia. Owner's name withheld. Consists of extensive exterior and interior alterations. Plans completed. Ready for bids in a few days.

Hospital Building, Broad and Ritner sts., Philadelphia. Architect, Horace W. Castor, Stephen Girard Building, Philadelphia. Owners, Methodist Hospital, on premises. Brick, stone, steel and terra cotta, 4 stories and braselement, 120x76 feet, tile roof, steam heating, electric lighting, tile and marble work, fire doors, cement and composition floors, hollow tile, metal lath. Plans in progress.

Administration Building (alt.), Broad and Ritner streets, Philadelphia. Architect, Horace W. Castor, Stephen Girard Building, Philadelphia. Owners, Methodist Episcopal Hospital, on premises. Consists of interior alterations to fourth floor, steam heating, electric lighting, tile work, metal lath. Architect taking sub-bids.

Garage (alt. and add.), northwest corner of Seventh and Spring Garden streets, Philadelphia. Architect, Frank V. Greenstein, Empire Building, Philadelphia. Owners, Very Best Garage Co., care of M. Berger & Co., northeast corner of Seventh and Green sts., Philadelphia. Brick, 1 story, 80x111 feet, slag roof, steam heating, electric lighting, cement floors, hollow metal skylights, tearing down present building to second floor level and exterior alterations. Plans about completed. Architect taking sub-bids.

Band Stand, Hunting Park, Philadelphia. Architect, Walter D. Smedley, Stephen Girard Building, Philadelphia. Owners, City of Philadelphia, office of Park Commissioners, Room 127, City Hall, Philadelphia. Timber, 1 story, 34 feet in diameter, tin roof, pine floors, metal lath. Architect taking bids, due as soon as possible. H. E. Grau Co., 1707 Sansom street, is figuring.

Loft Building, Eighth and Orange streets, Philadelphia. Architects, Peuckert & Wunder, 310 Chestnut street, Philadelphia. Owner's name withheld. Reinforced concrete and brick, 6 stories, 80x56 feet, slag roof, vacuum heating, electric lighting, tile work, rolled steel sash, fire, kalamein and hollow metal doors, cement and maple floors, hollow tile, elevators, ornamental iron work. H. E. Grau Co., 1707 Sansom street, are figuring (approximate bid).

Carpenter and Pattern Shop, Midvale, Philadelphia. Architect, private plans. Owners, Midvale Steel Co., Widener Building, Philadelphia. Brick and steel, 2 stories, 46x130 feet, rubberoid roof, concrete floors (steam heating and lighting reserved), concrete floors, rolled steel sash, iron stairs, ornamental iron work, metal lath, safety treads, sprinkler system. Owners taking bids, due June 30th. Doyle & Co., 1519 Sansom street,

Autocar Efficient for Any Sort of Hauling

The Samuel J. Creswell Iron Works of Philadelphia say:

"We carefully investigated various motor trucks in the service of different concerns, before we bought, and found nothing but satisfaction with the Autocar. It seems to stand up where others fall down.

"Our car has proved very efficient for any sort of hauling. It averages 1,000 miles a month, is economical and handy to use, and is an important adjunct to our general contracting business."

Write for illustrated catalog and list of more than 4500 concerns using Autocars in every line of business.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

The Tenants' Needs are The Builders' Guide

The house piped throughout for gas provides the tenant with five of the big factors in modern housekeeping:—

The Gas Range—clean, economical cooking.

Incandescent Gas Lighting—restful, eye-saving.

The Gas Water Heater—hot water for all purposes.

The Gas Iron—takes the mileage out of ironing.

Gas Heating Stoves—for quick, short period, auxiliary heating in Spring and Fall when it isn't practical to keep the heating system going all day and night.

'Phone Builders' and Operators' Division, ask us to send our representative.

Concrete and steel, extensions to Arch at Brewery and Manatawny Creek. Contract awarded to Brown King Const. Co., Commercial Trust Building.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

A retailer may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.—E.S.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.

Dwelling, Fairhill street and Cheltenham avenue, \$8,000. C. E. Lloyd, Jr. (O and C), Oak Lane. Stone first story, hollow tile second story, 27x37 feet. Slate roof, hot water heating.

Dwellings (3), 5005-07-09 Wayne avenue, \$23,880. Mrs. Emma Bishop (O), Seymour street. Charles H. Eckman (C), 2126 North Sixteenth street. Brick, 2 stories, 15x33 feet, slag roof, hot water heating.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., June 20, 1917.—Sealed proposals will be opened in this office at 3 P. M., August 9, 1917, for the construction of the United States Post Office at Dubois, Pa. Drawings and specifications may be obtained after July 5, 1917, from the custodian of the site at Dubois, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

"Chanelath," in official test, far surpasses the City's requirements of 406.4 lbs. per sq. ft. Scores 510.3 lbs.

Recent tests conducted under supervision of Philadelphia Bureau of Building Inspection with three concrete slabs reinforced with "Chanelath,"

CHANELATH—Gauge 24

- Prove that the *amount of seepage* through the mesh of Chanelath, as compared with normal seepage through wood, IS NEGLIGIBLE.
- Prove that the seepage was so slight that its loss had *no* appreciable effect on strength of concrete.
- Prove that the Chanelath develops a bond with concrete sufficient to develop full strength of the steel.
- Prove Chanelath as a satisfactory reinforcing material used without forms.

As The Editor Sees It

SWEEPING over the country and from the great lakes to the gulf is a nation-wide "Build Now" movement, the result of a conviction upon the part of men who have given careful study to the situation that nothing is to be gained by waiting for conditions to improve. It seems to be the consensus of expert opinion on the subject that neither material prices nor labor conditions are likely to go back to normal standards. In the circumstances the postponement of activity awaiting a more favorable market represents simply so much time lost. How widespread and general in scope is this "Build Now" movement may be inferred from the subjoined deliverances dealing with various phases of the building situation. The first of the articles quoted is from the *Architect and Engineer*, of California; the second from *The Chicago Tribune* and the third from *The American Architect*, from New York City.

* * *

AMERICANS have a habit of quitting work and crowding around when an accident occurs. The case in point is the world's "accident" in Europe," remarks the *Architect and Engineer*, of San Francisco.

"We are in danger of losing our heads and stopping work while the conflict is on. This would be a serious happening, but happily every American can help to prevent it without adding to the noise and confusion of going to war.

"The only thing necessary is to go quietly on in attending to our own business.

"While our naval and military forces are hastening to the front to destroy agencies and obstacles that seek to impede our growth, it is essential that we redouble our constructive efforts at home.

"We can both build and fight and we ought to seize upon this advantage as the greatest opportunity created by the war.

"Let both public and private useful building construction proceed. Production and handling of building materials and public and private construction work are fundamental industries of the country. Any tendency to suspend or postpone building projects is inconsistent with maintaining our prosperity. The country is prosperous. Building investors should not hesitate to go ahead with their plans. Railroads should spare no effort to supply the building industry with the cars needed to transport materials. Government, State, county and municipal authorities should encourage the continuance of all kinds of building. Road and street improvements in particular should go on unabated. Bad roads and streets are factors of first importance in the present high cost of foodstuffs. Never before was the improvement of highways so essential.

"The lumber, brick, cement, lime,

sand, gravel, stone and other building materials industries are basic. Neither government regulations nor railroad restrictions should be unnecessarily imposed to interfere with them. If any action is taken which results in the prostration of so fundamentally important industries, there is real danger of a surplus unemployed labor, a surplus of railroad cars and a crippling of business that will seriously embarrass the Government in financing the war.

"Let us build while we fight!"

There is the California idea!

* * *

THE Illinois legislature has abandoned its plans for extensive building operations in the State departments and institutions, and with the ear of faith we already hear applause the country over! Bravo! Let cities, commonwealths, and the federal government follow suit!"

"To which impending outbursts we reply," says *The Chicago Tribune* editorially. "Be orthodox, brethren, but don't be more orthodox than his holiness the pope." Paris has not suspended public building operations because of the war. Neither has Berlin. To curtail such operations, if by curtailment you mean putting a check on wild and wanton extravagance, is doubtless advisable. Self-confessed pork barrel expenditures must halt, and there are other pork barrels besides the celebrated cask of iniquity at Washington. Pork kegs, we

**DRAWING
MATERIALS**

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

might term them. States and cities have each their own. Away with such! But not with the long projected and long needed improvements that have an incontestable value. Just because we are no longer in a position to throw money about it does not follow that we must scrimp or perish. Neither does it follow that scrimping will prevent our perishing. It may even help us to.

"As we look at it, a quietus clapped on legitimate public building enterprises would rank with the mania for private economy that is now impoverishing milliners and dressmakers and many a distressed tailor. Fine—is it not?—to see her ladyship economize by starving her modiste! Inspiring to see her husband economize by skinning his tailor! For that is what it comes to. And they For that is what it comes to. And they

"Patriotism! Ye gods and little fishes! One plain duty of patriotism in war time is to keep the pot a-boiling. Waste is wicked, but legitimate spending a virtue. Within the bounds of reason, go on spending. It promotes "business as usual." It steadies the State. And what applies to the individual applies equally to municipalities, commonwealths, and the federal government. Let there be no havoc wrought in the building trade and its half dozen allied industries in the name of patriotic economy. To put a peremptory quietus on legitimate and sorely needed public building projects is to sow disorder, unrest, and distress at the very time when such calamities would work a maximum of mischief. Let us keep our hair on. In avoiding waste, let us also avoid the economy that in the end spells extravagance."

* * *

UNDER the head of "The Building Situation" the *American Architect*, of New York City, observes:

"Building operations throughout the country continue with but little abatement, the first quarter of this year showing a loss of only a fraction of one per cent. as compared with 1916, while 1916 displayed a great gain over 1915. Hoggson Brothers, the New York and Chicago builders, announce that they started active operations in April on five buildings for banks alone in different sections.

"The impression is gaining strength that while present costs of materials entering into the construction of buildings appear to be high, the prospects are for prices to go to still higher levels. The *American Architect* points out that inasmuch as a dollar will buy only three-fourths as much of any commodity as it would three years ago, the cost of building is in practically the same ratio to former costs.

"It is possible to enumerate one reason after another in favor of the con-

tention that present prices are low—not high," declares that paper. "If owners can be made to see that the really pertinent comparisons of costs are with the future rather than the past, building cannot fail to take on greater activity. Viewed in this light, present prices for building materials actually appear to be bargain prices.

"Authorities for the most part seem agreed that the chances for building material prices to take a drop are quite remote, whether hostilities continue for some time or whether peace should come within the near future. It is argued that the after-war demand on our industrial resources will be infinitely greater than they have been. France has just recently closed a contract involving two hundred million francs, most of which sum is to be spent in America for building materials to be used in the reconstruction of important buildings in cities in the vicinity of Verdun, the Argonne and the heights of the Meuse.

* * *

THE danger of a cessation of building activities does not lie so much in the impression that prices are too high as it does in an attempt to carry the economy idea to harmful lengths. Nothing could be more injurious than indiscriminate delaying of plans for building. This would create an industrial situation that would be far-reaching in its evil effects.

"The government is actually carrying on a campaign against the holding up of industrial activities, Howard E. Coffin, of the advisory commission of the Council of National Defense, declaring that "waste is bad, but an indiscriminating economy is worse. Unemployment and closed factories brought about through fitful and ill-advised campaigns for public and private economy, will prove a veritable foundation of quicksand for the serious work we have on hand. We need prosperity in war time even more than when we are at peace. Business depressions always are bad, but doubly so when we have a fight on our hands. The declaration of war can have no real evil effect on business. What bad effects are apparent are purely psychological and largely of our own foolish making. For our markets are the same in April as they are in March. We need more business, not less. There is real danger in hysteria. "Indiscriminate economy would be ruinous. Now is the time to open the throttle."

"Two years ago the prospective builder was urged to "Build Now" to secure the advantage of low prices and to give employment to idle labor. To-day he is urged to "Build Now" so as to keep skilled labor employed, to keep the wheels of industrial activity going, and to take advantage of present prices, lest he be forced to pay even more if he delays."

REVIEWING current conditions in the building field a writer for the New York *Real Estate Record* sums up the situation as follows:

"Prospects are brighter in the building field to-day than for a long period. Last week there were indications that a renewal of structural activity was imminent and the conditions during the past few days have confirmed them. A considerable amount of new work has come to light and this has created a feeling of optimism throughout the industry. There is little doubt but that the influence of the immense amount of Government construction now in progress has had much to do with the improved general condition. Work of this character is looming up as the most important factor in the building industry. The contracts for the erection of army and navy cantonments, hospitals, storehouses and other military projects are being taken by some of the largest and most reputable concerns in the country and are attracting sub-contractors of a high calibre. The Thompson-Starret Company, Geo. A. Fuller Company, Turner Construction Company, Fred T. Ley & Company and James Stewart & Company are among the prominent general contractors that already have important contracts under way for the Federal authorities. When firms of the standing of these undertake work of this character it will not be long before a substantial number of smaller concerns will recognize the value of competing for this type of work. The effect of the Government work on the general building business has been excellent and has greatly assisted in stabilizing affairs in the industry.

* * *

PPRIVATE construction is apparently in a better condition than it has been for some weeks. During the past week a number of large and noteworthy projects have been announced for early action. One of the features of the revised status of the structural industry is that the work now in prospect is far more general in character than it has been, indicating that much of the recent depression is a thing of the past, and that builders are preparing to start their long contemplated structures. Only a few weeks ago the major portion of the work under way was confined to commercial and manufacturing structures, for which the demand was imperative, with here and there a costly residence, or a building of some other nature, but designed for private occupancy. Apartment house construction had practically ceased and there was only a small number of speculatively built dwellings in active construction or in prospect. This week the outlook has become quite different. The new operations are far more varied in

character and their volume indicates that large sums will be expended in construction work throughout the summer and early autumn. Steel frame construction is practically the only phase of construction work that has not felt the improvement in the situation. There is a strong movement on foot tending toward the elimination of structural steel wherever possible in favor of brick or reinforced concrete construction. The high cost of fabricated steel coupled with the great difficulties encountered in obtaining reasonably prompt deliveries have effected the erection of structures dependent upon a framework of steel. Other types of structural work are reflecting the improved conditions and better times are being looked for by all interested in the building industry."

* * *

CURRENT times are pregnant with possibilities for the property owner and speculative builder who is brave enough to combat the conditions effecting general building activity and start the construction of new structures of a type for which there is an insistent demand. The investor, who in spite of the high prices of building commodities will erect modern multi-

family dwellings, for moderate rentals will reap large benefits from his foresight. The extremely low land values that still maintain in certain sections of greater New York will more than offset the additional cost of construction entailed. Rentals are high and with a tendency toward further increases. One of the peculiar facts in connection with the foregoing is that the low land values are directly in line with the movement for residential expansion and in districts in which a large part of the housing developments is expected. Sections of Brooklyn and Queens are ripe for improvements of this character and there is a steadily growing demand for living accommodations in modern buildings and at rentals which, while not excessive, will allow a fair margin of profit to the builder or investor regardless of high cost of construction."

"There has been no material change in the prices of building commodities. The market seems to be rapidly stabilizing and there is no evident desire on the part of manufacturers and dealers to make further advances unless circumstances absolutely compel them."

The moral of which is Build—Build Now!

EDITORIAL NOTES

B. F. Affleck was re-elected president and **T. J. Hyman**, secretary and treasurer, both of Chicago, at the annual meeting of the Universal Portland Cement Company, held at Gary, Ind., on June 13. The company is a subsidiary of the United States Steel Corporation and has offices in Chicago, Pittsburgh, Minneapolis and Duluth, and plants at Buffington, Ind., Universal, Pa., and Steelton, Minn.

* * *

The high prices for all kinds and grades of lumber do not seem to be greatly effecting the market as the demand is holding strong and in some quarters is exceeding the supply. All lumber interests, manufacturers, dealers and consumers are intensely interested in the requirements of the Government for the necessary lumber for the construction of the proposed cantonments and other measures for the national defense. From estimates prepared by the Council of National Defense the amount of lumber to be taken out of the market for these purposes will be in the neighborhood of two million board feet. This amount will be spread over a period of twelve months and will come from all quarters of the country. The amount represents approximately 5 per cent. of the year's output, and while it seems colossal, will actually not affect the market to a great extent. Under the circumstances there need be no fear on the part of the large users of lumber that a full

supply of sizes and grades will not be available for all purposes, although unless the transportation situation is improved there might possibly be some difficulty in having the supply brought to the market in a reasonable time. The forest resources are sufficient for all demands and the only question involved is a present doubt as to the producing capacity.

* * *

Alfonso Del Guercio, architect, has moved his office from 222 Washington street, Newark, N. J., to 800 Broad street, in the same city.

* * *

The producers and dealers of building stone are in relatively better position at the present writing than are the manufacturers of many other structural materials. There is a fair amount of practically all kinds of building stone available and, while there is some difficulty in obtaining prompt deliveries on account of the transportation problems, the conditions in this market are an improvement over those experienced in other lines. The price of building stone has not advanced in comparison with the increases in other structural commodities.

* * *

The records of the Bridge Builders and Structural Society, as collected by its secretary, show that during the month of May,

1917, 56½ per cent. of the entire capacity of the bridge and structural shops of the country was contracted for.

* * *

The long-pending suit of **W. H. Pearce & Co., Chicago**, manufacturers of the Crescent line of heating apparatus, which suit was filed against the Gordon Company and Sears, Roebuck & Co., of Chicago, has been adjudicated in the United States Federal Court in Chicago and the Pearce patents have been declared valid. It appeared from the evidence furnished by W. H. Pearce & Co. that Sears, Roebuck & Co. manufactured the infringements through the Robert Gordon Company, steam fitting contractors. The Gordon Company furnished sketches of the apparatus to the Crane Company, which, it was testified, with full knowledge of the fact that the Pearce apparatus was patented, constructed the infringing apparatus which the Robert Gordon Company installed at the plant of Sears, Roebuck & Co., in Chicago. The defendant's testimony endeavored to show priority of invention and prior use. The jury awarded to W. H. Pearce & Co. the full amount of their claims, together with costs.

* * *

Phillips, Fidler & Beck, architects, will discontinue their offices in the Chadokoin Building, Jamestown, N. Y., on July 1. The firm will continue under the same name at their Warren, Pa., office. Mr. Fidler will go into business in Cleveland, Ohio.

* * *

Walter Kidde & Co., New York, is the new title of the engineering and constructing firm of Walter Kidde. The firm's quarters are at 180 Cedar street. This business was established in 1900 and has specialized in the construction and equipment of factories. The new organization includes departments of construction, hydraulics, steam and mechanical engineering, electrical engineering and chemical engineering. The officers of the company are: President, Walter Kidde; vice-president, B. G. Worth; secretary and treasurer, I. R. Lewis; Board of Directors, above named officers and Henry Lang, vice-president of the Ingersoll-Rand Co., and E. S. Boyer, of the American Hard Rubber Company. Mr. Kidde's other principal associates who compose the engineering board of the new corporation are A. B. Miller, Walter S. Wainwright, M. J. Butterfield and E. Schwartz. The chief draftsman is Thorlief Fliflet.

* * *

Arthur M. Torrey, formerly with **W. S. Barstow & Co.**, has left that organization to re-enter the employ of Hildreth & Co., inspection engineers, 15 Broad street, New York City, with which firm he was connected for several years prior to joining the Barstow force.

* * *

H. E. Baton, formerly of Twelfth and Sansom streets, Philadelphia, has removed his offices to the Presser Building, 1713 Sansom street.

PHILADELPHIA METER CO., 942 Real Estate Trust Building.

BOTH PHONES

This Roof is Guaranteed until 1936—

THE following illustrates the working of our new plan to guarantee Barrett Specification Roofs for twenty years.

When the question of roofing was reached in the specifications covering the building illustrated, the Construction Department of The Pierce-Arrow Motor Car Company inserted approximately the following in the building plans:

"The roof shall be laid according to the Barrett Specification, dated May 1, 1916, and the roofing contractor shall upon completion of the job deliver to us the Barrett 20-Year Guaranty Bond, in accordance with Note 1 of such Specification."

Competitive bids were then asked for.

The concern to which the job was finally awarded promptly notified us regarding the job, asked for our Inspection Service, and the 20-Year Bond.

Our Inspectors supervised the job, saw that the Specification was strictly followed both as to

methods and materials, and on its completion certified that the roof was O.K. in every respect.

On this certification the United States Fidelity & Guaranty Company of Baltimore issued a 20-Year Surety Bond, which *exempts the owner from any maintenance or repair expense to the roof until 1936.*

The Guaranty Bond costs the owner and the roofing contractor nothing.

How to Get the 20-Year Guaranty Bond

This new Guaranty Bond is issued on all Barrett Specification Roofs of 50 squares or more in all towns in the United States and Canada of 25,000 population and over, and in smaller centers where our Inspection Service is available.

Our only requirements are that the roofing contractors shall be approved by us and that The Barrett Specification, dated May 1, 1916, shall be strictly followed.

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request

Brick, 3 stories, one-story addition, vapor heat, electric light, maple floors, plastering and painting. Contract awarded to Smith-Hardican Co., 1606 Cherry street, Philadelphia.

BUILD NOW.

In these days of high prices some natural hesitation in embarking in building enterprises is natural. Certainly it is observable here and there in instances in which building operations announced as about to go ahead have been held up or bids on work being received prove in excess of estimated cost.

The most thoughtful of those engaged in building, however, believe that now is the time to proceed with such work before prices are higher. No one doubts that they will go higher if war conditions continue to obtain, and the best judgment of those at the Government helm is that they will. Besides, it is figured, men might as well do business on a high plane of values as on a low. If conditions involve high expenditures they will also involve large receipts.

That this viewpoint is taken by the majority is manifest when one considers the increased building figures. In this city alone the building figures for May showed an increase of over \$600,000, and for the first five months of the year one of over \$1,500,000.

Whatever the cost, men must still live in houses and do business in commercial structures and factories. Children must be educated in school houses and the entire social and business life of the country must be housed.—“Ohio Architect.”

The Tenants' Needs
 are
The Builders' Guide

The house piped throughout for gas provides the tenant with five of the big factors in modern housekeeping:—

The Gas Range—clean, economical cooking.

Incandescent Gas Lighting—restful, eye-saving.

The Gas Water Heater—hot water for all purposes.

The Gas Iron—takes the mileage out of ironing.

Gas Heating Stoves—for quick, short period, auxiliary heating in Spring and Fall when it isn't practical to keep the heating system going all day and night.

Plant, Almond and Boston ave., \$2,000. Cramp & Sons Ship Building Co. (C), Philadelphia. Hoffman Eng. Co. (C), Pennsylvania Building. Iron on iron, 38x54 feet, slag roof.

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., June 20, 1917.—Sealed proposals will be opened in this office at 3 P. M., August 9, 1917, for the construction of the United States Post Office at Dubois, Pa. Drawings and specifications may be obtained after July 5, 1917, from the custodian of the site at Dubois, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Third and Girard Avenue, Philadelphia

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

Bricklayers, Masons, Plasterers

DO YOU

use the hod carrying method of elevating brick, mortar, cement, etc.? It's too old

fashioned—too slow and costly—for present day building work.

"LITTLE GENERAL" MATERIAL ELEVATOR HOISTS are used by dozens of bricklayers in Philadelphia who used to rely on the hod carrier method which was expensive and unsatisfactory. Now they use a "LITTLE GENERAL" and save money.

One man to load the elevator, one man to distribute the barrows and one man at the hoist will keep fifteen bricklayers hustling.

Elevator operates in an opening 26" x 60".

Easy to erect, easy to take down and move, convenient to store.

Write for prices and special discount.

No More Ashes To Lug

No clumsy pan to spill dust and dirt on the kitchen floor

The Glenwood Ash Chute

solves the problem. It is located just beneath the grate and connected by a sheet iron pipe straight down through the kitchen floor to ash barrel in cellar. No part is in sight. Not a particle of dust can escape. Just slide the damper once each day and drop the ashes directly into the ash barrel.

The Dust-Tight Cover

to barrel is another entirely new Glenwood Idea and is very ingenious. This is only one of the splendid improvements of the new plain

Cabinet Glenwood

the Range without ornamentation or fancy nickel, "The Mission Style" Glenwood. Every essential refined and improved upon. This Range can be had with the latest and most improved Elevated or End Gas Range attachments. It can be furnished with fire box at either right or left of oven as ordered. Our handsome booklet tells all about it.

The Cabinet Glenwood

As The Editor Sees It

THIS number of THE GUIDE is the *Semi-Annual Building Statistics Number*, dealing with local structural activities of every description for the period covered by the first half of 1917. On another page will be found a detailed report, compiled from official figures, showing the total expenditures for all classes of building from January 1st of this year up to and including the close of June. The report shows the number of permits used, by months, in the various classes of construction; the number of operations in each class; the total expenditure in each class, the grand total of expenditure for the half year; the number of additions, alterations and repairs with the amounts expended and a detailed record, by wards, of dwelling house operations.

Reviewing this report as it compares with one before me, showing the official figures for the entire twelve months of 1916, I am impressed with the fact that in spite of the depression in the building field, incident to the war, and notwithstanding the labor scarcity, the uncertainty regarding deliveries in some lines, and the advancing cost of material, 1917 is able to show up uncommonly well.

* * *

FOR example, there was expended during the twelve months of 1916 for building work of all kinds the total of \$49,896,570. The first six

months of 1917 show a total expenditure of \$20,531,220.

In new work exclusively, 1916, entire year, showed an expenditure of \$41,550,775. The first six months of 1917, in the face of all kinds of discouragements, shows an expenditure in new work exclusively, of \$15,908,225. In the matter of factories 1916 showed for the entire twelve months a total expenditure of \$5,515,590. The first six months of 1917 shows an expenditure in factory construction of \$5,416,225. There were built during the twelve months of 1916 a total of 878 garages involving a total outlay of \$1,307,340. During the first six months of 1917 there were constructed 470 garages at a cost of \$664,470. The heaviest fall-offs, aside from operation dwellings is registered in the returns on office buildings and warehouses. In 1916 a total of 36 office buildings went up at an outlay of \$1,867,690 as against 23 office buildings for the first half year of 1917 at a total outlay of \$370,930.

Twenty-six warehouses were built in the first six months of 1917 at an expenditure of \$494,400 as against fifty-four constructed in the twelve months of 1916 at a cost of \$2,881,215. It should be kept in mind in reviewing the figures here given that while those quoted for 1916 are necessarily based on the returns only from January to June. A very mild spurt of activity, within the next few months, would suffice to send

the figures for 1917 up to the levels of last year.

* * *

THE most noticeable drop has taken place, as was quite natural, in the construction of two and three-story operation dwellings. Operative builders have been practically inactive this year, due to a feeling that material prices would sooner or later return to normal figures and admit of building upon something like the old scale of costs. This, it is now plain to everybody in the trade, is a forlorn hope. Material prices are up to stay—for some time to come. Incidentally there is a decidedly healthy and growing demand for houses, so the outlook now is that activity in this line is due for an early resumption. However, the first six months of 1916 show that 4,413 two-story and 307 three-story dwellings were constructed. Six months of the present year show 1,930 two-story and 219 three-story dwellings.

Viewed by and large and with the proper allowance for conditions, the returns for the first six months of the present year are altogether encouraging. There is every reason to believe that with labor conditions at all easy and deliveries, particularly of structural steel, in a position to be figured safely, 1917 will show figures for the year worthy of Philadelphia's past record a great building center.

**BLUE
PRINTS**

I HAVE before me as I am writing a survey of the New York realty and building field that appeared in the *New York Evening Post* of Saturday last. It is so true of conditions, generally, that I am moved to quote a few of its more salient paragraphs.

Speaking of the New York realty situation the writer says:

"Optimism is the prevailing keynote of the realty situation in this city. While the market is not overburdened with business, enough is being done—considering the period of the year and the abnormal conditions—in one manner or another to keep the average person interested in real property in an optimistic mood as to the present and the future.

"More and more money is coming into the market for investment in mortgage loans, and in consequence the restoration of confidence in the general situation is keeping pace. The final adjustment of the Liberty Loan, on which 18 per cent. was paid the Government this week, and which money was deposited in banks, leaves prospective investors in a clearer atmosphere of what they may now do in the matter of employing their idle capital."

* * *

ONE of the factors making for the comparative calm in realty is the practical clean-up of all the private houses that until recently were upon the market like drugs, though labeled at the most attractive prices possible. Buyers with foresight have gobbled up all such offerings. This is pretty generally the condition of all property, and the depleted attractions are not being replaced by other cheap offerings, all of which bespeaks the strengthening character of the market, and, moreover, there is but the scantiest probability of even a partial replacement of the recent bargain properties. As a matter of fact, the next crop of buyers who will go into the market for propositions will have to pay more for their properties, and those to follow will pay still higher prices, unless all signs of an upward trend now prevailing are most unexpectedly reversed.

"An upward revision of prices is inevitable, because of the lack of new construction. Even now the demand exceeds the supply, and as the probability for new building is very remote, the demand in consequence will grow still greater, considering the natural increase in population.

"It is a generally known fact that new construction for the future is entirely out of all proportion to the actual current needs of the city, and that what new building there is under way, is not going to make any appreciable impression upon the demand. Moreover, it is not expected that builders now working upon new buildings can be induced to under-

take other operations, when they complete those they have on hand, because of the trying times they have experienced with them. Especially so because of the difficulty in getting materials."

* * *

HIGH prices, too, have an important bearing upon the general attitude of builders regarding future construction, and that phase naturally will deter many operations so long as it continues. The holding of current high prices for structural materials is anticipated by all at least during the period of the war and perhaps for a long time after that. Meanwhile the Government is pre-empting considerable materials for its war plans and that activity is bound to sustain prices while it lasts and thus keep the building trades in a state of doubt. All of this points to the maintenance of values of existing buildings, and with excellent prospects for a rise in prices.

"Speculative building may be said to be at a standstill and with no indication of an early resumption, while construction by individuals for immediate needs depends largely upon the urgency of their situation."

* * *

I WAS talking the other day with a West Philadelphia operative builder who had the courage to disregard the finger-posts of pessimism and go ahead with an operation of high class dwellings. He tells me that sales are better than he has known them to be in many years at prices considerably in advance of those normally scaled to the class of house he is erecting. He anticipates little difficulty about selling off the entire operation and expects to break ground for a new batch of houses just as soon as the present lot is off his hands. Real estate men are simply clamorous for houses. They report the demand exceeds anything they have ever known. What seems to be necessary chiefly in the operative field is a little, old-fashioned nerve. Money is plentiful, work is good, wages are high and buyers with money are looking for houses. If the operator can't see the wisdom of meeting the demand in spite of conditions he is lacking in the business elementals.

* * *

THE garage question is an acute one in many cities. Prudence requires the garage to be of fireproof construction. The scarcity of steel renders compliance with modern regulations more or less difficult. New York's experience with this phase is practically typical, writes *A. L. Libman*, a well-known New York architect:

"The vast number of automobiles in use in the city of New York, both for pleasure and for commercial use, have created an abnormal demand for garages, and with high prices in the steel and

material markets, as well as the extraordinary demands for labor, an acute situation has arisen, greatly augmented by the zoning resolution, which prohibits the erection of garages in residence or business districts, excepting in certain cases, on appeal to the Board of Appeals, and it became necessary that action be taken by the Board of Aldermen to relieve the situation. Furthermore, the enactment of the Building Code provided that all garages, except in suburban districts or outside of the fire limits, be built fireproof, in the event that they were in excess of forty feet in height; and the Code of Ordinances provided that all garages should be made fireproof, excepting that one- and two-story garages might have non-fireproof roofs, covered with fire-retarding material.

"While many garages have been built during the past twelve years, in a strictly fireproof manner, it has been the custom to a great extent to convert existing stables so as to make them suitable for the storage of automobiles. About ten years ago, the Building Department had charge of the construction of all types of buildings, and the Bureau of Combustibles had sole jurisdiction as to occupancy, and permits were issued for many garages, built under the prevailing regulations, in which the floors, ceilings, partitions, stairs, and windows were non-fireproof."

* * *

WHEN the Fire Prevention Bureau was created, it was decided not to issue any permits for garages until the floors, ceilings, partitions, and rear and side windows were made fireproof, and violations were served on owners not complying with these and other conditions of a similar nature, and permits were refused for garage occupancy in such cases. This inflicted great hardship on owners and tenants, and the Fire Revision Bureau had difficulty in enforcing its regulations. Restraining injunctions were obtained against the bureau, and because of these injunctions the bureau permitted many garages to exist without permits.

"After the enactment of the new Building Code, and until November 28, 1916, permits were regularly granted and the right of occupancy was not questioned where the precepts of the Fire Prevention Bureau were obeyed with respect to the use of fire retarding materials, and compliance with the violations heretofore served on these buildings. At that time the authority of the Fire Prevention Bureau was questioned, and it was determined that no permits would be granted unless all garages were fireproof in every particular as provided for in the new code. Prior to the enactment of the Lockwood-Ellenbogen bill, creating the Board of Standards and Ap-

peals and the Board of Appeals, vested with jurisdiction with respect to all construction in the Bureau of Buildings, and several of the Superintendents of the Building Departments refused to grant any permits for alterations or new buildings, excepting they were made fireproof. This was in line with the provisions of the Building Code, but in contradiction to the Code of Ordinances, Chapter 10, relating to explosive and hazardous trades.

* * *

WITH a desire to relieve this situation, and in view of the fact that a vast loss would be entailed by owners and tenants of garage property who obeyed the various orders of the Fire Prevention Bureau and the other constituted authorities, an effort was made by Vice-Chairman Moran, of the Board of Aldermen, to have the Board pass an ordinance which would provide proper safeguards and still permit the use of this class of property for the purpose for which it had been altered or erected. There were several hearings on this proposition. Civic bodies, including the joint committee, representing the American Institute of Architects and the Building Trades Employers' Association, as well as all persons interested, were freely consulted, and, as a result, a public hearing was finally held by the Committee on Buildings on Friday, June 15. At that hearing the ordinance about to be presented to the Board of Aldermen was submitted, and there were a great number of conflicting opinions voiced, especially in relation to the essential provisions of the ordinance relating to the erection of non-fireproof garages and to the final clause:

"All existing garages shall comply with the requirements for buildings hereafter altered for use as garages, unless waived by the Fire Commissioner."

* * *

THE ordinance also required that in two-story buildings, while non-fireproof construction might be permitted on the second floor, with fire-retarding materials applied, the first tier of columns had to be fireproofed, and this would have involved the shoring of the second tier and a vast amount of other labor and expense. Chairman William P. Kenneally finally suggested that a special committee be appointed, and that this committee submit to the Committee on Buildings of the Board of Aldermen on Friday, June 22, an ordinance which in their opinion would meet the situation. On that date there was submitted the final draft, which, with minor corrections, will be acted upon by the Board of Aldermen on Tuesday, July 3.

"The final draft permits the erection

of four-story non-fireproof garages, not exceeding fifty feet in height, subject to fire-retarding rules, to be subsequently adopted by the Board of Standards and Appeals. Existing buildings may also be altered under the same conditions prescribed for new buildings. Garages heretofore erected, and complying with the rules of the Fire Prevention Bureau, and for which that Bureau had issued permits, are legalized. In all events, all other provisions of the Building Code must be adhered to, especially in relation to garages covering large areas.

"In connection with the proposed ordinance, it must be remembered that garages could only be erected in locations permitted by the building-zone resolution, or in locations approved by the Board of Appeals, after a public hearing, conducted under the requirements of the law. A vast number of buildings heretofore used as stables may possibly be converted into garages, in the event of the enactment of the ordinance, and provided that they conform to article 2, section 6, class 2, of the building-zone resolution, permitting the reconstruction

or structural alteration of an existing building to an extent not greater than 50 per cent. of the value."

* * *

THE peculiar architectural treatment, demanded by the zoning law in New York City restricting the heights of perpendicular facades, is to be noted in the revised plan of the *Hotel Commonwealth* in that city. The building is stepped back as it ascends after a fashion that recalls the architectural ideas of the cliff-dwellers. In the instance under notice, the effect is anything but pleasing, although it may be that a scheme of design will yet be worked out to relieve the piled-block impression of the series of receding flights required by the new regulations. Graceful terraces, with roof gardens, break what would otherwise be a cubist nightmare, but the ensemble is, for all that, hardly agreeable. We are judging it, it should be said, from the architect's sketch. It is quite possible, of course, that the actuality may convey much more of grace and artistry than are there revealed.

EDITORIAL NOTES

The annual convention of the Pennsylvania State Association of Architects was held at Harrisburg. The Association pledged itself to conduct an investigation among the presidents of the thirty-seven universities of the United States, conferring degrees in architecture, on their attitude toward conducting more popular lectures on the subject of architecture and on other ways and means calculated to make architecture a part of a liberal education. Officers were elected as follows: Albert Kelsey, president, Philadelphia; Frederick A. Russell, vice-president, Pittsburgh; W. A. Plack, secretary, Philadelphia; M. I. Kast, treasurer, Harrisburg.

* * *

The A. B. See Electric Elevator Company, formerly at 1007 Land Title Building, Philadelphia, have removed their offices to 507-508 Colonial Trust Building, Thirteenth and Market streets. George T. Atkinson is the manager in charge of the local office. The new Colonial Trust Building has been equipped by the A. B. See Company with three traction passenger elevators of the latest and most approved type.

* * *

The bank clearings of the United States for the year ending October 1st last were \$261,000,000,000. These figures reflect a very large part, but certainly not all of the business activities of the United States. Our national wealth is now roughly estimated to be in the near neighborhood of two hundred and thirty billion dollars, an amount not very far away from the sum of the yearly bank

clearings reported last fall. The annual yearly income of all of the people of the United States now amounts to about \$37,000,000,000. The agricultural products alone amount to about \$9,000,000,000, and the entire Liberty Loan could be deducted from the proceeds of our agriculture, and still leave \$7,000,000,000.

* * *

We have been hearing so much about the difficulties of placing our \$2,000,000,000 of war bonds, that a comparison of our financial strength with what is being done in Great Britain ought to be illuminating and profitable at this time. The national wealth of the United Kingdom in December, 1915, was estimated at \$73,000,000,000, and the national income was placed at \$15,000,000,000. The war budget of France for three months of war is announced at nearly \$2,000,000,000, and it has excited no special comment in that country. Figures are not at hand to show the present estimate of the national wealth of France or the amount of the annual income. It will be fairly safe to state that the figures are well below fifty per cent. of that of Great Britain, and therefore it seems reasonable to place the figures of our national wealth at approximately twice that of the aggregate wealth of Great Britain and France together. The war outlay of those two countries now runs above thirty-six millions a day, or in round figures, fifteen billion dollars a year, and yet we hear no word of complaint from the other side.

* * *

The Electrical Contractors' Association of

Pennsylvania held its annual convention and electrical show in the Hotel Adelphia, Philadelphia. Among the speakers were J. B. McCall, president Philadelphia Electric Company, who spoke on "The Central Station's Message;" Washington Devereaux, chief Philadelphia Underwriters' Electrical Department, "The Practical and Ethical Aspects of the Electrical Business;" J. W. Hooley, contracting electrical engineer, New York, "The Necessity for Competent Estimating;" Frank H. Stewart, F. H. Stewart Electric Company, Philadelphia, "The Manufacturer's Territorial Sales Agency;" H. W. Alexander, of the Society of Electrical Development, "Selling the Electrical Idea," and C. M. Ripley, "Floodlighting." M. Edwin Arnold, Philadelphia, is president of the association, and M. G. Sellers, Philadelphia, is secretary-treasurer.

* * *

The Equitherm Control Corporation is the new name of the Geissinger Regulator Company, New York. The company's office is 30 Church street, and its factory at 203 Greenwich street.

* * *

Among the members of the Red Cross Commission which is going to France to study relief needs of every kind are Mr. George B. Ford, associate editor of the City Planning Department of the "Journal of the American Institute of Architects," and Mr. William Emerson, president of the New York Chapter and a member of the Institute Committee on Publications. Mr. Ford will consult with the French authorities in regard to rebuilding problems and will be the planning expert attached to the commission.

* * *

The president of the society was recently asked the following question by the advertising manager of a large manufacturing concern, says the "Monthly Bulletin of the Illinois Society of Architects: "Why do not architects answer letters of inquiry from manufacturers?" The answer was the statement that, "Every architect receives on an average of twenty letters per day, not accompanied by either a return post card or a stamped envelope, asking for information when there is work on the boards. Assuming that every architect was busy the entire time, it would mean that every architect would be expected to answer, say 20 letters of inquiry per day, or 6,000 per year, and as no letter can be written at a less cost than about 20 cents, counting postage, stationery, time and overhead, every architect would be expected to spend the sum of \$1,200 per year in answering these inquiries if they were answered." Is further comment necessary?

* * *

Mr. W. Fred Locke, Jr., of Lockwood, Greene & Co., Boston, Mass., writes in the Industrial Building issue of the "American Architect:"

"Any one who has followed the changes in modern industrial methods is familiar with the new attitude of the up-to-date factory manager in regard to fireproof construction.

No longer is it merely a question of getting the most advantageous insurance rate; it is a question of life itself. The manufacturer now says, 'a disastrous fire in my plant would practically put me out of business. Fire insurance would never repay me for the loss of business, loss of prestige, least of all for the certain loss of skilled operators. The struggle to rebuild and to re-equip a new plant, to train a new force of employees, to get back lost business in these days of strenuous competition, would require an outlay of capital and efforts which would be beyond my resources.'

"An abundance of daylight is now an accepted essential in factories. In fact, any added expense that may be necessary within reasonable limits to procure a full measure of natural light will be justified. Well-lighted work rooms unquestionably make for good health, relieve eye strain, tone up a working corps, insure a better product with less weight and reduce the hazard of accidents."

* * *

The contract for the huge new army cantonment at Yaphank, L. I., has been awarded to the Thompson-Starrett Company, 49 Wall street, New York City, which has already begun work, and is making good progress in preparing the site for the proposed army buildings. The project will involve an outlay of between \$3,000,000 and \$4,000,000. Other army cantonment contracts throughout the United States have been awarded as follows: At Rockford, Illinois, to the Bates & Rogers Construction Company, 37 Van Buren street, Chicago, Illinois; at Des Moines, Iowa, to Charles Weitz & Son, of Des Moines; at Annapolis Junction, Maryland, to Smith, Hauser & M. F. McIsaac, Inc., 18 East Forty-first street, Manhattan; at Little Rock, Arkansas, to Charles Stewart & Co., 30 Church street, Manhattan; at Chillicothe, Ohio, to A. Bently & Sons, Toledo, Ohio; at Battle Creek, Michigan, to Porters Brothers, Detroit, Michigan; at Louisville, Kentucky, to Mason & Hangar, Richmond, Kentucky; at Fort Riley, Kansas, to the George A. Fuller Company, Kansas City, Missouri; at Fort San, Houston, Texas, to Stone & Webster, 147 Milk street, Boston, Mass., and at Petersburg, Virginia, to Rinehardt & Dennis, Charlottesville, Virginia.

* * *

A total of \$765,000,000 in gold is stored in the United States Assay Office in Wall street, more than ten times the normal average in previous years.

* * *

The remarkable development of the suburban districts surrounding New York is exemplified in the experience of a prominent development company within the last generation. In 1897 land which was worth \$1,500 an acre is now being sold close to \$15,000, and houses which formerly brought \$500 a year are now returning more than \$1,000 to their owners.

* * *

Cumulative evidence is massing rapidly to the effect that the construction of new build-

ings of a private and semi-private nature is growing more active daily and that the outlook in the building field is now more satisfactory. Authoritative reports emanating from various sections of this country are almost optimistic and the mental attitude of the building interests generally is one of wider vision and increased hope. Recent communications from the outlying districts of New York State and New Jersey indicate that many counties, municipalities and smaller communities are proceeding with construction work that has been held in abeyance for a long time. This type of activity includes the construction of roads, sidewalks, sewers, bridges and culverts, and the erection of new public buildings and extensive alterations and additions to existing structures. The movement is significant of the expenditure of immense sums of money during the summer months for work of this character.

* * *

While there is no prediction possible as to the probable end of the conflict abroad, active preparations are in progress for the reconstruction of the devastated towns and villages in Belgium and Northern France. Following the return of the American Commission to France a report was published that there is an unquestioned demand developing for portable temporary buildings and materials for the construction of permanent buildings, including factories, schools and residences. The inquiries for structural specialties will also be strong and will include metal ceilings, window and door frames and sash, cement, lumber, rolled steel, basic clay products and other types of building supplies. All types of structural materials will be welcomed that will have a tendency to facilitate rapid construction. The demand is likely to continue for a long period, as it will be many months before the countries engaged in the war will be in a position to manufacture the materials required, so the greatest portion of the supply will of necessity have to be forwarded from the United States.

* * *

The analysis of the occupational mortality experience of the Metropolitan Life Insurance Company, as published recently by the Bureau of Labor Statistics of the United States Department of Labor, is interesting as indicating the causes of death by occupation. The largest single group is "laborers," forming 11.4 per cent. of the total. More definite occupations are represented in considerable numbers, such as clerical employees, farmers and farm laborers, and persons engaged in the various building trades in iron and steel work, and in the railway service. Deaths among carpenters total 4.2 per cent. of the total; painters, paperhangers and varnishers, 2.9 per cent.; janitors and building employees, 1.9 per cent.; masons and bricklayers, 1.9 per cent.; plumbers, gas fitters and steam fitters, 1.2 per cent.; iron and steel mill workers, .8 per cent.; cabinet and furniture workers, .8 per cent.; tanners and tinware workers, .7 per cent., and electricians, .6 per cent.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Factory, 912-16 Westmoreland street, Philadelphia. Architect not selected. Owners, Hohlfeld Manufacturing Company, Tenth and Allegheny avenue, Philadelphia. Brick, 3 or 5 stories. Work contemplated.

Industrial Plant, Twentieth and Cambria streets, Philadelphia. Architects, Wm. Steele & Sons Co., 30 South Fifteenth street, Philadelphia. Owners, H. Belfield Company, 435 North Broad street, Philadelphia. Reinforced concrete and brick. Factory building, 5 stories, 280x100 feet; foundry building, 1 story, 280x100 feet; storage warehouse, 1 story, 280x100 feet; power plant and garage, 1 story (size undecided), slag or composition roof, steam heating, electric lighting, rolled steel sash, hollow metal skylights, fire doors, cement and maple floors, hollow tile, metal lath, elevators, waterproofing, ornamental iron work. Plans in progress.

Apartment House (alts. from residence), Nineteenth and Mt. Vernon streets. Architect, S. K. Neubauer, 1118 Chestnut street, Philadelphia. Owner, J. Reno, care of architect. Brick and concrete, 3 stories, add. 30x20 feet, slag roof, hardwood floors, electric lighting extension, galvanized iron skylights, fire tower. Architect taking bids, due July 16th. Freund Const. Co., Bulletin Building; Lam Building Co., 1001 Wood street, and Conneen Const. Co., 1737 Filbert street, are figuring.

Garage (alt. and add.), 118 Queen street. Architect, David A. Supowitz, 1118 Chestnut street, Philadelphia. Owner, A. Miles, on premises. Brick, 1 story, 36x92 feet, consists of general alterations, new brick walls, slag roof, cement floors, electric lighting, gasoline storage system. Architect taking bids. F. Nardy & Co., 1228 Fitzwater street, and Conneen Const. Co., 1737 Filbert street, are figuring.

Hotel and Restaurant (remodeling), 215 S. Broad street, \$50,000. Architect, Richard C. Loos, 1017 Chestnut street, Philadelphia. Owner, Daniel J. Kopp, 5355 Baltimore avenue, Philadelphia. Brick, stone, steel and terra cotta, 4 stories and basement, 20x98 feet (plumbing, heating, electric work and 2 elevators reserved), hardwood, cement and composition floors, tile, marble and terrazzo work, fire doors, metal lath. Plans completed. Architect about ready for both general and sub-bids on all lines.

Sales and Storage Building (alt. and add.), 1911 Chestnut street, Philadelphia. Architect, Addison H. Savery, Stephen Girard Building, Philadelphia. Owner, Joseph Habisreiter, 1604 Chestnut street, Philadelphia. Brick and terra cotta, 4 stories and basement, 25x178 feet, and two-story addition, 45x40 feet, slag roof, cement and pine floors, tile and marble work, metal lath (plumbing, heating and electric work reserved). Plans about completed. Architect will take bids in a few days.

Northeast Sewage Treatment Works, Richmond street, north of Wheatsheaf lane. Archi-

teet, private plans. Owners, City of Philadelphia, Bureau of Surveys, Department of Public Works, City Hall, Philadelphia. Consists of 32 rectangles, reinforced concrete, 2 stories, sedimentation tanks, 80 sludge drying beds and appurtenant work. Owners taking bids, due July 18th at noon. Inquire at Room 534 City Hall.

Church and Sunday School, Palethorp and Clearfield streets, \$80,000. Architect, George E. Savage, Witherspoon Building, Philadelphia. Owners, Palethorp Memorial Presbyterian Church, care of Wm. H. Scott, 1211 Clover street, Philadelphia. Stone, brick, 1 story and basement. Plans completed. Architect ready for bids.

Church (alt. and add.), Woodbine avenue and Sixty-third street, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Owners, Our Lady of Lourdes R. C. Church, Rev. James H. Mullen, on premises. Stone, new stone walls, cement floors, mill work, waterproofing. Architects have received bids.

Residences and Garages (14) (7 pairs), Washington lane and Limekiln pike, Philadelphia. Architect, E. Allen Wilson, 1218 Chestnut street, Philadelphia. Owners, Model Building Co., care of Henry Kummerle, Morris Building, Philadelphia. Stone, brick, 3 stories, 16x50 feet, slate roofs; garages, 1 story, 12x16 feet, asphalt shingle roof, hot water heating, electric lighting, tile and marble work, oak and cement floors. Owners taking sub-bids on all lines.

Stable, Garage and Repair Building, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Brick, 1 story, 99x239 feet, asbestos roof, cement and wood floors, steam heating, electric lighting, rolled steel sash, fire and hollow metal doors, ornamental iron work, roof ventilators, gasoline storage system. Owners taking bids, due July 16th. Irwin & Leighton, 126 N. Twelfth street, and McCloskey & Bahls, 1620 Thompson street, Philadelphia, are figuring.

Engine House (add.), Ninth and Noble streets, Philadelphia. Architect, private plans. Owners, Swift & Co., 908 Noble street, Philadelphia. Geo. W. Smith & Co. deliver in New York with their Autocar

"There is no place within 100 miles of us that we cannot now reach quickly and economically with our Autocar," say George W. Smith & Co., of Philadelphia. "For prompt shipments to New York, for example, the car has proved of remarkable service. Runs over there and back the same day loaded to capacity with building material, and never fails to deliver on time. The low cost of operation has impressed us and also the staying qualities of the car."

Write for illustrated catalog and list of more than 4500 concerns using Autocars in every line of business.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

Circular or Representative upon Request

The Tenants' Needs are The Builders' Guide

The house piped throughout for gas provides the tenant with five of the big factors in modern housekeeping:—

The Gas Range—clean, economical cooking.

Incandescent Gas Lighting—restful, eye-saving.

The Gas Water Heater—hot water for all purposes.

The Gas Iron—takes the mileage out of ironing.

Gas Heating Stoves—for quick, short period, auxiliary heating in Spring and Fall when it isn't practical to keep the heating system going all day and night.

AN UNBREAKABLE WINDOW GLASS.

A new glass, transparent, tough and strong, which a 22-caliber bullet cannot penetrate and a brick cannot shatter, is stated by "Popular Science Monthly" to have recently been invented. The secret of its strength is said to be a sheet of white, transparent celluloid, twenty one-thousandths of an inch thick, placed between two pieces of glass. The glass and celluloid are welded together under high temperature and tremendous pressure, the result being a solid sheet possessing the transparency of the best plate glass and the strength of a sheet of metal.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

Contract awarded to W. E. Burnham, Law Building, Baltimore, Md.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—“Municipal Engineering.”

Sheridan to provide quarters for the working force engaged on the job. At 5 o'clock in the evening a train of fifty empty cars was on track in the yards of the lumber company. The entire train was loaded with the 1,400,000 feet on April 30 out of the stock of Northern, Southern and Western lumber carried on hand. The contract called for all dressed lumber. The most remarkable part of the operation therefore, was that some 400,000 feet of the shipment was run through the planing mills of the lumber company, as well as being loaded on the cars in the same day.

The Chicago and Northwestern Railroad delivered the trainload of lumber at Fort Sheridan on Tuesday morning, May 1. The Sumner Sollitt Company had its construction force on the ground equipped with gasoline saws and all other devices for quick work. Ohio National Guard Engineers staked out the Company streets and buildings. The job was finished on May 10, in just ten working days, using only one shift of men per day. The largest number of men employed on the job at one time was 785. Here is what they built complete, ready for occupancy:

42 barracks, 20x126 feet each.

21 mess buildings, 20x110 feet each, equipped with tables and benches built in regular logging camp style.

21 lavatory buildings, 16x63 feet, equipped with toilets, shower baths, etc.

1 postal exchange building, 20x30 feet.

1 telephone exchange building, 20x33 feet.

This is the story of one of the camps where officers will be trained for the new army and is duplicated in many other camps throughout the country, as there are fifteen reserve officer training camps in the country, requiring quarters for 35,000 prospective officers. The regular permanent barracks do not begin to provide room for all these men. This story of the Fort Sheridan camp is that of all other camps where cantonments are being built, and will be duplicated on a larger scale to provide quarters for the new army of 500,000 men called out September 1.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

Are you aware, Mr. Advertiser, that this paper circulates in 5,000 offices, reaches every architect of any prominence in the East and the Secretary of every architectural club and chapter in the country?

Garage, Wayne avenue and Harris street, \$1,200. Mary B. Hamilton (O), 7444 Devon street. Harry White (C), 8131 Germantown avenue. Stone, 1 story, 18x21 feet, slate roof.

City Farms, Southampton road, \$928,000. City of Philadelphia (O), City Hall. F. W. Mark Const. Co. (C), 1701 Finance Building. Brick, 1 and 2 stories, 223x43 feet.

Dwelling, Forrest avenue and Upsal street, \$3,000. S. N. Nester (O and C), 804 Somerset street. Brick, 2 stories, 16x42 feet, slag roof, hot water heating.

Storage, 3120-30 Market street, \$200,000. Twentieth Century Storage Warehouse Co. (O), on premises. George & Borst (C), 277 South Eleventh street. Reinforced concrete, 7 stories, 49x220 feet, slag roof.

Garage, Lawrence and Queen streets, \$2,300. D. Mullen (O), 167 Queen street. H. P. Schneider (C), 3713 York Road. Brick, 1 story, 55x22 feet, slag roof.

Coal Yard, Thirtieth street, south of Locust street, \$20,000. George B. Newton Co. (O), Franklin Bank Building. Armstrong & Latta Corp. (C), 532 Land Title Building. Wooden trestle, constructed of pine.

Dwelling, 558-60 East Monaster avenue, \$6,000. John J. Hurley (O and C), 4416 Cresson street. Brick, 2 stories, 15x54 feet, tin roof.

ARMY CAMP CONSTRUCTION IN THE WEST.

FORT SHERIDAN, Ill., July 2.—This is the story of the use of lumber in an army cantonment, and of the manner in which the American Logging Camp has been copied for regular army uses, in the building of quarters for the Reserve Officers' Training Camps. When the letters R. O. T. C. are seen, this is the interpretation. There are two camps at Fort Sheridan, each of 2,500 men, roughly, one camp for Illinois and one for Wisconsin and Michigan combined. Each camp is organized in fifteen companies of about 160 men each. Wisconsin and Michigan are in permanent barracks except for four companies which with the Illinois regiment are quartered in cantonments on the south side of the reservation. There are quarters for two emergency companies with the four Wisconsin-Michigan companies, making a total of twenty-one companies quartered in the newly erected wooden cantonments.

The quarters for each company are four buildings, placed end to end with a twenty-foot space between each. On the south is the mess hall, with a kitchen and two tables the length of the building, a la lumber camp, bench seats on each side of each table. The next two buildings are the quarters, with cots in each, for eighty men. North of these two is a bath house.

The speed of construction of the camp was notable, and a most striking evidence of the ability of the typical American business man to meet emergencies. The contract for the construction of the buildings was awarded to the Sumner Sollitt Company, Chicago, on Saturday evening, April 28. About noon on Sunday, April 29, the Edward Hines Lumber Company, of Chicago, received the order for the material, amounting to a total of some 1,400,000 feet. During the afternoon five auto loads of lumber were dispatched to Fort

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Fire Retarding "STAR" Ventilators

PATENTED

are designed to keep the maximum amount of pure, fresh air in constant circulation. They are constructed from the very best materials by expert workmen and in the event of fire will prevent the spread of flames upward through the action of a fusible link which parts, allowing the damper to close by gravity.

As The Editor Sees It

THERE is practical unanimity among authorities as to the necessity which exists for avoiding any curtailment of building construction at this time. While materials are undoubtedly higher in price, labor scarcer than it has been for years and deliveries, in certain lines, less assured than under normal conditions there is no immediate prospect of any betterment of these conditions and nothing whatever to be gained by a postponement of plans. By way of offsetting the dark side of the existing situation reports from all over the country show a keener renting and selling demand than has been the case since the Civil War, with better figures than have at any time in the history of real estate, ruled the market. The *National Builder* remarks of the situation now presented:

"There should be no curtailment in building construction. Let both public and private useful construction proceed. Production and handling of building materials and public and private construction work are fundamental industries of the country. Any tendency to suspend or postpone building projects is inconsistent with maintaining our prosperity. The country is prosperous. Building investors should not hesitate to go ahead with their plans. Railroads should spare no effort to supply the building industry with the cars needed to transport materials. Government, State, county, and municipal authorities should encourage

the continuance of all kinds of building.

"The lumber, brick, cement, lime, sand, gravel, stone, and other building material industries are basic. Neither Government regulations nor railroad restrictions should be imposed unnecessarily to interfere with them.

"Building will not be cheaper, for a long time at least. It is generally conceded by those who follow the trend of economic currents that even were the war to be terminated before another issue of this magazine reaches its readers, little if any difference would be made in the cost of building construction. And no one looks for a speedy termination of the war. The prospective builder must thus make his comparisons of prices with the future rather than with the past; and judged by this standard the prices of to-day are probably more advantageous than any which will prevail for a long time to come.

* * *

AFTER the war there will be an unprecedented demand made upon America for building materials, by the foreign countries which have been devastated and whose constructive industries have suffered by reason of the diversion of labor, capital and enterprise to the arts of war. In fact, this demand has already commenced; for it is stated that much of our war loan to France is to be spent in this country for materials to be used in the immediate reconstruction of important buildings

which have been destroyed. Let us repeat it, then, that comparison must be made not with the past, but the future; in the light of which comparison the far-seeing owner will understand that he is merely increasing his costs by waiting. *Building will not be cheaper!*

"Canada has found that there is something to do beside standing around watching the progress of the conflict. It has discovered that work must follow along in much the accustomed channels if the Dominion is to be of as much service to the mother country as it desires to be. The result is that building operations have with the present year returned about to the normal. Here is an opportunity for us to learn from the experience of others. Let there be no cessation of building operations in this country."

* * *

THE impression is gaining strength that while present costs of materials entering into the construction of buildings appear to be high, the prospects are for prices to go to still higher levels. *The American Architect* points out that inasmuch as a dollar will buy only three-fourths as much of any commodity as it would three years ago, the cost of building is in practically the same ratio to former costs.

"It is possible to enumerate one reason after another in favor of the contention that present prices are low—not high," declares that paper. "If owners

**BLUE
PRINTS**

can be made to see that the really pertinent comparisons of costs are with the future rather than with the past, building cannot fail to take on greater activity. Viewed in this light, present prices for building materials actually appear to be bargain prices."

Authorities for the most part seem agreed that the chances for building material prices to take a drop are quite remote, whether hostilities continue for some time or whether peace should come in the near future. It is argued that the after-war demand on our industrial resources will be infinitely greater than they have been. France has just recently closed a contract involving 200,000,000 francs, most of which sum is to be spent in America for building materials to be used in the reconstruction of important buildings in cities in the vicinity of Verdun, the Argonne and the heights of the Meuse.

The danger of a cessation of building activities does not lie so much in the impression that prices are too high as it does in an attempt to carry the economy idea to harmful lengths. Nothing could be more injurious than indiscriminate delaying of plans for building.

* * *

UNDER the caption, "Keep on Building," the *New York Real Estate Record* says:

"According to the generous manner in which this country responded, first to the appeal for the Liberty Loan and directly afterward to the nation-wide campaign for a hundred million dollar subscription for the advancement of the Red Cross work, there is no evidence of a shortage of money or that industry is to suffer materially for lack of funds. The hearty support given to both of these campaigns, particularly in the Metropolitan districts, was especially gratifying. In both campaigns the quotas of the local territory were oversubscribed by considerable amounts. The responses were by no means purely sentimental, but were exhibitions of sound sense and business sagacity.

"The evident willingness with which the people of the country generally parted with their funds for the support of these worthy objects is a mighty lesson to investors in real estate and speculative builders. It indicates that there are unlimited sums of money available when more than three billion dollars of Liberty Loan bonds are subscribed for and approximately one hundred and twenty-five millions pledged for the expansion of the Red Cross activity. This was activity. This was accomplished without a possibility of adverse financial or economic effect. A people that can command this amount of money for affairs outside of their business interests, certainly will not hesitate to expend larger

sums for the enlargement of their commercial pursuits and the gratification of personal desires.

* * *

THE present time is an excellent one to commence the erection of new structures. While it is granted that the costs of building materials are high, yet we learn from authoritative sources that they will beyond a doubt advance to higher levels where they in all probability will remain for a lengthy period. The demand for additional buildings of most all types is unquestioned. Commercial and manufacturing concerns are rapidly expanding to meet the wider application of their products and are seeking enlarged facilities for their increased businesses. Their requirements are urgent. Unless they erect structures for their own occupancy they have no means of branching out, and if they build the needed factories, ware houses and other necessary projects they tie up large amounts of capital that might better be expended in raw materials and equipment.

"The housing problem is another matter that calls for quick attention of the investor and speculative builder. From this quarter also comes a demand that is imperative. The inquiries for rentable space in modern buildings is evidence of a demand that is greater than the supply and it is growing with each day. Rents are steadily increasing for accommodations in buildings of practically every type and the owner of renting properties has an opportunity for larger returns than ever before. Paradoxical as it seems, land values have not appreciated in many parts of Greater New York in comparison with the advances in value of other commodities. While the land values continue to remain stationary at the existing levels, the builder has a splendid chance to reap large benefits from his foresight in building now.

* * *

WHATEVER the cost, men must continue to live in houses and conduct their business affairs in stores and factories. Schools must be provided for the education of the children and the entire social and commercial life of the nation must be adequately housed. Hesitation in embarking in structural enterprises will gain nothing for the builder contemplating structural improvements. According to the present outlook the longer he waits the higher the cost of construction will be, and the smaller the return on the amount of money invested. This country might as well conduct its affairs on a high plane of value as on a low. If conditions involve high expenditures they will also involve larger receipts."

SPEAKING before the Rotary Club, at a recent luncheon, Lee J. Eastman, discussing the tendency shown in many lines to economize unnecessarily remarked:

"Every intelligent citizen knows that we are engaged in a serious war and we have implicit confidence in the ultimate victory of the side on which we are allied, there is no use denying the fact that we have a Herculean task before us.

"Without a doubt, it is a time that calls for a curtailment of wastefulness and this appeals particularly to the problem of the food supply. Every housewife who practices judicious economy puts herself in the ranks of those who serve the nation.

"But it is not meant that we must close our purse strings, nor that we must hoard our money. There is little difference between the man who hoards provisions and the man who hoards his money. Both are a public enemy in this crisis.

"The President means that a curb should be put on extravagance and waste. To most effectively serve our country we must economize in the right way. We must think and act sanely. False economy would prove as disastrous as reckless extravagance.

* * *

WE must economize in a way so as to work the least possible injury to the business interests of the country and to the hundreds of thousands of employees who are dependent for their livelihood, on the factories and shops being kept open as usual.

"Should we suddenly close our purse strings and stop making purchases, the effect upon the factories and shops would be immediate. Many of them would be forced out of business and very shortly we would find the streets of our cities and towns choked with the unemployed, clamoring for bread. That would certainly not be a situation favorable to the successful conduct of the war.

"Economy, if intelligently exercised, is always commendable, but forced, artificial economy, if carried to the extreme, will bring about the very calamity it is intended to avert.

* * *

IT is of the very first importance that the country continue its legitimate business undisturbed. Any sudden or radical cutting down of expenditure in the legitimate channels of trade, will work a tremendous harm to the business interests of the country and indirectly to the hundreds of thousands dependent upon them.

"If our people should suddenly discharge their servants, and dispose of their automobiles, if husband, wife and daughter should stop ordering from tail-

ors, shirt makers, milliners and dress-makers, or from the big stores, if restaurants, theatres and concert halls are deserted, if there comes a sudden cessation in business activity, such widespread distress would result in the business life of the community that no man can say what the outcome would be, and millions of innocent persons would suffer.

"It is estimated that within the coming twelve months, there will be spent in this country, between seven and ten billions of dollars. There is every evidence that to a great measure this sum will be economically and judiciously expended and will find its way into all channels of trade.

"It is difficult for the ordinary business man to conceive the enormity of this expenditure.

"America with its marvelous growth in population and industrial wealth has never experienced anything compared to it.

"There can be no business depression if we keep our heads and act sanely."

* * *

EDWARD N. HURLEY, former chairman of the Federal Trade Commission and now a member of the War Council of the American Red Cross hits the nail squarely on the head when he observed in a recent address:

"We should be able to meet the war bills out of our surplus energy. This is the best contribution that business men can make. There is no need for disturbing any wage or hour standard. If a man works eight hours a day, let him put

a little more heart into his task and he will find that his productive energy will increase materially. Let the business man conduct his business a little more vigorously; let him work out his cost sheets; and get his prices where they ought to be, and he will find that he is making enough extra money to pay for taxes and liberty bonds. That should be his bit in the war."

* * *

THE moral of all this is to keep plugging much as usual. If prices are high in the material market selling prices or finished construction are correspondingly high. If deliveries are difficult in certain lines there is usually a way around the difficulty. The labor problem is admittedly acute, but even that may be expected to settle itself within a very brief space of time. What is needed is the cool head, the steady nerve, faith in American ingenuity and American resources, and the vision to make the most of opportunities. - As the *Chamber of Commerce Journal* puts it:

"Faith is the great need of the people to-day—faith in Providence to lend might to our right; faith in nature to respond bountifully to the wonderful efforts of our agriculturalists to increase the food supply, to provide a surplus for our Allies, and faith in our Government which has taken hold of the problems before it in a way that demonstrated that it is deserving of our faith."

"Be confident and live your normal lives as far as possible. Make business proceed as usual."

compensated accidents were about sixty thousand, involving compensation amounting to \$11,500,000.

* * *

A number of builders in the warmer regions of the United States have adopted the tropical idea of constructing double roofs, with an air space of about 6 inches between. This serves to protect the upper story from the direct heat of the sun.

* * *

The second annual White Pine Architectural Competition was judged at The Greenbrier, White Sulphur Springs, West Virginia, by Architects Aymar Embury, II, Wilson Eyre, Charles Barton Keen, John Russell Pope, and Alexander Trowbridge, who composed the jury of award. Four prizes and eight mention designs were selected from almost three hundred drawings submitted. The first prize was awarded to Winchton L. Risley and James Perry Wilson, associated, of New York; the second prize to Jerauld Dahler, of New York; the third prize to Olaf William Shelgren, of Buffalo, N. Y.; the fourth prize to Sotaro Y. Ohta, of New York. The mentions were awarded to Louis J. Farmer, of New York; C. M. Foster and W. M. Smith, associated, of New York; Daniel Neilniger, of New York; Stanley P. Parker, of Boston; Richard M. Powers, of Boston; Chester B. Price, of New York; Satterlee & Boyd, of New York, and Benj. Schreyer, of New York. The detailed report of the jury will be published in the August number of the "White Pine Series of Architectural Monographs," together with the prize and mention designs.

* * *

The Department of Commerce has issued, at a price of 15 cents, Circular No. 47 of the Bureau of Standards, which is entitled "Units of Weights and Measures—Definitions and Tables of Equivalents," which contains sixty-eight pages of definitions and translation tables for converting U. S. customary units into metric units and vice-versa. This circular is of particular value to those engaged in foreign trade or in scientific or technical work and it may be obtained by sending the price to the Superintendent of Documents, Government Printing Office, Washington, D. C.

* * *

At the annual meeting of Sargent & Co., New Haven, Conn., Wilfred Lewis and Ziegler Sargent were elected as directors of the company and the following members of the board of directors were re-elected: Henry B. Sargent, Edward R. Sargent, Joseph D. Sargent, G. Lewis Sargent, John Sargent, Bruce Fenn and George F. Wiepert. The new officers of the company are as follows: President, Henry B. Sargent; vice-president, G. Lewis Sargent; secretary, Murray Sargent; treasurer, Ziegler Sargent.

* * *

General building construction, or that part of it mainly dependent upon fabricated steel, is anxiously awaiting the expected Governmental action on prices. The present outlook is that it will have a decided effect in easing the market and will greatly stimulate the

EDITORIAL NOTES

Building superintendents in New York City have just organized the New York Building Superintendent's Association. The object of the association is to promote a fraternal spirit of co-operation and the attainment of greater efficiency and economy in the care, maintenance and operation of buildings. The active membership list is confined to those engaged in superintending buildings located in the city of New York. An executive committee consisting of Harry G. West, Joseph R. Harley, G. D. Andrews, J. Wadlington, George Boge and W. G. Chapman was elected, and this committee and the officers of the association will constitute its management. The executive committee has the authority to employ, discharge and fix the duties and compensation of the employees of the association. The initiation fee is \$10 a year, which also covers the dues for the first three months, and the annual due have been placed at \$12. The officers of the association are as follows: F. W. Douglas, president; Robert MacGregor,

vice-president; S. C. Wells, secretary, and George Escobal, treasurer.

* * *

First steps have been taken toward reconstructing the devastated districts of Northern France through the organization in Paris of the Association de l'Aisne Devastee. The rehabilitation of this vast section will involve millions of dollars and enormous quantities of material. American capital and enterprise will play no small part in restoring the ruins of to-day into the thriving residential and industrial communities of to-morrow.

* * *

At the Industrial Safety Congress recently held at Syracuse, N. Y., Commissioner James M. Lynch, of the New York State Industrial Commission, made the statement that if the accidents in this State could be reduced ten per cent. the actual saving to the employers in compensation charges alone would more than pay for all of the activities of the Commission. During 1916 the total number of

building industry in all parts of the country. The price of fabricated steel has been advanced to a still higher level. Mill shipments of steel shapes are now quoted at 4.669c. to 5.169c. New York, for delivery in one to four months.

* * *

The price of lime has been advanced, and the new schedules went into effect last week. Eastern finishing is now selling at \$2.10 a barrel of 280 pounds net and masons' common at \$1.90 a barrel. While the demand for lime is not particularly heavy the prices are firm and there is no possibility of a cut for some time. The outlook in the building situation has improved to a certain extent and this will naturally reflect in better conditions in the lime market.

* * *

National Electric Credit Association held its eighteenth annual meeting at the Biston City Club, Boston, Mass., last week. The hotel headquarters were at the Copley-Plaza. The annual meeting was an innovation this year, as it was the first time that a fixed program had been scheduled. Among the subjects that were discussed at this meeting were the following: "The Scope of the Electrical Credit Association," by Guy V. Williams, New York City; "Trade Acceptances," by J. D. Meek, Indianapolis Electric Supply Company; "What and Why Is the Cash Discount?" by David Kerr, Lewis Electrical Supply Company, Boston; "Should Interest Be Charged on Overdue Accounts?" by D. E. Crane, Macbeth-Evans Glass Company, Pittsburgh; "The Small Risk—Definition, Exploitation and Control," by R. P. Tracy, Joseph E. Greene Company, Boston; "Contractors' Accounting Methods—The Best Credit Barometer," by J. W. Smith, General Electric Company, New York City, and "Municipal Mumps—Prevention and Cure," by J. F. Thomas, Elliott-Lewis Electrical Company, Philadelphia.

* * *

American Society for Testing Materials held its twentieth annual meeting at Atlantic City. Among the subjects discussed which were of interest to engineers are the following: "Electrical Insulation," C. E. Skinner; "Corrosion of Iron and Steel," S. S. Voorhees; "Some Applications of Magnetic Analysis to the Study of Steel Products," C. W. Burrows; "Interior Surface Defects in Brass Condenser Tubes as a Cause for Corrosion," W. Reuben Webster; "The Hardness of Hard-Drawn Copper," D. H. Pierce; "The Electrolytic Determination of Tin on Tinned Copper Wire," George G. Grower; "Preservative Coatings for Structural Materials," E. H. Walker; "Lubricants," C. C. Van Gundy; "Comparison of the Heat-Insulating Properties of Materials Used in Fire-Resistive Construction," W. A. Hull; "Refractories," A. V. Bleininger, and "Suggested Improvements in the Manufacture of Silica Brick," C. E. Nesbitt and M. L. Bell.

* * *

The Westinghouse Electric and Manufact-

uring Company held its regular meeting of the board of directors in New York recently. An extra dividend of one-half of 1 per cent. was declared on both the common and the preferred stock for the benefit of the Red Cross fund. The following officers were elected: Chairman of the board, G. E. Tripp; president, E. M. Herr; vice-presidents, L. A. Osborne, C. A. Terry and H. P. Davis; acting vice-president, T. P. Gaylord; comptroller and secretary, J. C. Bennett; assistant secretary, W. H. Jones; assistant treasurer and secretary, S. H. Anderson; auditor, F. E. Craig; assistant auditor, W. B. Covil. Three new vice-presidential offices were created, and the following were elected to fill them: H. B. Shute, H. T. Herr and W. Cary. H. F. Baetz was elected to succeed Mr. Shute as treasurer, while L. W. Lyons succeeds Mr. Baetz. W. J. Patterson was elected to the new position of assistant auditor.

BOOKS RECEIVED.

The Typography of Advertisements that Pay.

By Gilbert P. Farrar. D. Appleton & Co., New York City. Illustrated. Price, \$2.25 net.

Here is, unqualifiedly and by long odds, the most practical and lucid volume on what might be called the "mechanism" of advertisement construction that has ever been given to the public. It is the very A, B, C of good advertising, written by a man who knows every phase of his subject, and made so plain and easy to grasp that a child could understand it. Mr. Farrar has avoided the error of judgment, common to men who write upon the subject of advertising, of over-emphasizing the "How to Write" side of the question. What Mr. Farrar sets out to show, and he has succeeded beyond measure, is how to build good advertising. He explains why certain forms of arrangement are better than others; why certain classes of advertising call for distinctive types and illustrations; why the style of arrangement that is good in one kind of an "ad" is ineffective and ill-adapted for another, and a host of other points of the practical sort that the man will need to know who aims to write and prepare "advertisements that pay." Mr. Farrar explains the point system, gives his reader a comprehensive idea of the best type faces and their sizes, covers the subject of illustrations and borders, reproduces page after page of "ads" covering a wide range of products and analyses with the sureness of an expert the merits and defects of each. The man of intelligence, of native wit and selling ability, who cannot prepare a good advertisement after reading Mr. Farrar's valuable little volume may be set down as a hopeless case. He is beyond teaching. "The Typography of Advertisements that Pay" is, in our judgment, the most valuable contribution to the literature of advertising that we have ever read. It is practically invaluable to the man whose aim is an intelligent mastery of the "mechanics" of ad-building.

WALL COVERINGS.

"The ideal material for wall coverings is a wide unbleached muslin. This can be obtained up to fifteen feet in width, and is put on with regular wallpaper paste, which is a preparation of dextrin. While the paste is still wet, a coat of glue and ochre is thoroughly scrubbed into the weave of the muslin. When this is dry two consecutive coats of lead and oil are applied, the last coat containing a flattener to give the mat finish. When this is completed, including what decorations are desired, the entire surface is given a coat of buttermilk and starch, which preserves the surface from the attack of dirt and soot.

"When the wall or ceiling becomes grimy with dirt, a thin solution of paste, thoroughly brushed on the surface and then wiped off with a sponge with lukewarm water, leaves the surface as clean as when it was originally painted. Then a fresh coat of buttermilk and starch is put on to preserve it until the next washing.

"Another material is paint applied directly to the plaster. This is not so desirable as the muslin, for plaster as it dries through the years is likely to shrink and leave small pin cracks.

"Still a third material is water color, or so-called 'kalsomine.' This requires: first of all, the application of a coat of glue sizing, to make the plaster impervious to moisture. This makes necessary only one coat of color. The soft mat effect produced by this method is very delightful, but—any water which comes in contact with this surface makes an ugly spot.

"Several of the best designers, such as Sir William Morris, Walter Crane and Voysey, have given much attention to wallpaper designs, and where their designs are worked out by the hand-blocking process they are very beautiful.

"Wallpaper originated with the Chinese. Thomas Chippendale brought back from his trip to the Orient a number of examples of these paper wall hangings, and, having at that time an influence on interior decorating, he started a fad for these Chinese papers. It was the custom when building a house in those days to fit heavy cartridge paper to the plastered surface and then send it to China by some merchant calling at Hong Kong or Canton, to be decorated by these well-known Chinese artists and returned to England to be installed in its place.

"Many of the well-known English manor houses to-day are decorated with these interesting documents, which may be said to have been the origin of paper used as wall hangings. From England the use of papers spread to France, and here the eighteenth century gave to the world some of the most interesting designs in hand-blocked papers that have ever been produced."—From "The Healthful House," by Lionel Robertson and T. C. O'Donnell. (Reviewed.)

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Brick, 1 story, 12x18 feet, tin roof, cement floor (plumbing, heating and electric work reserved). Contract awarded to Julius Solomon, 1828 North Franklin street, Philadelphia.

FORMULA FOR MAKING PUTTY.

Possibly you would like to know how to make common putty, especially if you want to vary the strength. This formula is given by a builder, who says:

“Good common putty is made of chalk (whiting) and linseed oil. This can be strengthened by adding a small amount of white lead. Wagon makers use a putty composed of red lead and linseed oil, which in time becomes about as hard as granite.”

Even the best piece of machinery gets a hot bearing once in a while.—Ex.

The Tenants' Needs are The Builders' Guide

The house piped throughout for gas provides the tenant with five of the big factors in modern housekeeping:—

The Gas Range—clean, economical cooking.

Incandescent Gas Lighting—restful, eye-saving.

The Gas Water Heater—hot water for all purposes.

The Gas Iron—takes the mileage out of ironing.

Gas Heating Stoves—for quick, short period, auxiliary heating in Spring and Fall when it isn't practical to keep the heating system going all day and night.

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.

WATCH THE "ADS."

June brings a wealth of summer flowers, some days of sun and some of showers; the Builder hustles through the day, to make his growing business pay, and you can hear the hammers ring, the busy saw and planer sing; while here and there the houses rise with rooftrees pointed toward the skies.

Leader Water Systems

Run by gasoline engine, electricity or hand; give hot and cold, hard or soft water in kitchen, bath and laundry. Do away with woman's biggest job. Consult us for prices on what you need in the water line.

KEYSTONE SUPPLY & MFG. CO.

Plumbing and Heating Supplies
913-47 North Ninth Street, Philadelphia

A little later in the year, before the frosts of fall appear, the finished roofs will greet the eye, and storm and sleet and snow defy. Not every roof will stand the test, not every roof will prove the best, for some may stand the summer sun, but fail when winter has begun. Some, too, alas! will show decay, before a year has passed away.

It's quite a problem, to be sure, to know good roofing from the poor; but there's one safe and certain way, that you can put to test to-day. Before you lay this Builder Book upon the desk top, take a look where all the "ads" are printed to be scanned by Builders, such as you.

Let me suggest you turn to her, and say, "My dear stenographer," (the "dear," of course, you may omit, unless you think she'll stand for it), but say, "Just take this letter to those roofing people P. D. Q."

"Dear Sirs, your catalog will be appreciated much by me; please send me prices and the proof that you can make a perfect roof. I only want the best, you know; so show me, for I come from Mo."

If you will try my free advice, and use the roofing once or twice you order on my "Show me" plan, you'll be a sure "ad" booster man.

—Frank Adams Mitchell in "The National Builder."

CO-OPERATION WITH ARCHITECTS BENEFICIAL.

Much Unnecessary Labor Eliminated, Vexatious Problems Solved and Satisfactory Results Obtained if Principals Work in Harmony.

An architect may be trained or untrained; may know or may not know. A material manufacturer or dealer may truthfully present the qualities of his wares or he can surround them with an atmosphere of mystery. A contractor may build with infinite care or shiftless neglect. The architect, material man and contractor may work together to the best interest of the owner or they may quibble and quarrel and get nowhere.

The architect must be qualified to diagnose his client's needs. His judgment must be predicated on established facts. He must know the contract law, local trade terms and customs. In the taking of competitive bids, he must use discretion in the choice of responsible bidders. He must take pains to see that all bidders are treated fairly and justly. He must recognize that his client is under obligation alike to all worthy contractors; that having received carefully prepared, legitimate bids, that the lowest capable bidder has justly earned the award of the contract. He must realize that a mistake on the part of a bidder is an injustice to the contractors who have submitted bids in good

faith and should bar that bid from further consideration and justly entitle the bid of the next lowest contractor to first consideration. He should realize that all bidders should be required to stand by their bids or withdraw from consideration and should not tolerate changes in bids.

Having determined that the choice of materials is properly the function of the architect, we are now prepared to inquire how materials may be best presented to architects for their consideration. The successful entering wedge would seem to be descriptive advertising in architectural publications, followed by short personal letters drawing attention to the nature and advisability of a product and suggesting the possibility of an early interview with the representative. Following this correspondence, a technically expert missionary should call upon the architect. The qualifications of this representative are of the utmost importance. There is nothing more annoying to an architect than to waste his time in an interview with a representative of a material manufacturer who lacks both information and tact. A special

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO.,
Tasker Street Wharf, Delaware River, Philadelphia.

representative of a material manufacturer should carry with him a very carefully prepared catalog or illustrated page substantially gotten up on pages of standard size.

This should give complete detailed information and illustrations of the product which he is presenting. This material should be especially trustworthy and exactly to the point. There must be no doubt as to the nature and proper application of the product.

During this interview the material missionary should tell the architect where he may see the full sized working models of his product. There is no method so convincing to clinch an argument as to see the actual material in ample scale, and next to seeing the material actually in place, convenient exhibits of full size models are most effective. If the architect specifies the material, then he is in fact, if not in name, the purchasing agent. The wise material man will recognize his status as such and give him all of the data necessary for intelligent purchase. There can be no intelligence in purchase if there is not an accurate knowledge of actual price as well as comparative prices. The material man should remember that no architect of character will specify any material where he does not know the actual price which the reputable contractor will have to pay.

Why should not the material man be perfectly frank and give the architect the trade discounts at once, thus saving him the trouble of getting them in some other way. I have never been able to see the reason for the mystery with which so many material men surround their products—a mystery preserved both as to chemical composition and to price. To me it is an insult to the intelligence of the architect. Of course, the sensible architect knows that both the material man and contractor are making a profit. It is his duty, however, to see to it that this profit is no more, quality and efficiency considered, than is asked by responsible, legitimate competitors in fair competition on an equal article. Is there then a single worthy plea that can be entered against the spirit of frankest co-operation existing between the material man and the architect alike in reference to information as to cost, as to quality and as to manner of installation?

Relation of Contractor.

Now, that we understand the limitations and functions of both architect and material man, let us discuss the proper relation of the contractor to the remaining members of the triangle. Primarily, the contractor is one skilled in the cost and organization of construction. To command respect in his chosen calling he must know cost, he must be able to estimate with accuracy the amount of labor required in any trade. To execute any piece of work which is presented for his consideration he must at all times be an authority on building material and market conditions. He

must know where, when and how much material can be obtained; he must know the possibilities of the labor market; he must be able to secure the right sort of men at the right time to execute any work on which he has assumed contracts. To meet these conditions he must be able to look both into the past and the future; he must have an accurate system of cost accounting and an accurate index of men, giving full information as to their special qualifications and advisability. With this information before him, he can speak with comparative certainty as to probable cost and the time required for execution of the work.

Quantity Survey Desirable.

It is to be hoped that the time will soon come when the contractor will not be required to take off quantities from plans and specifications. The system in vogue at present which requires each contractor to make his own quantity survey is a duplication of the same service which is not only wasteful, but puts upon the contractor a duty for which he is not qualified by his training. This system has always been most productive of misunderstanding between owner, contractor and architect. All should co-operate to secure the early adoption of a system of independent quantity surveys, a system which would submit a duplicate and intelligently presented list of material to all contractors estimating on any given branch of work, making certain in this manner a uniform basis of estimating.

Another item which demands particularly close co-operation between the architect and contractor is the manner and method of inviting, preparing and handling of bids on proposed work. There is just as much reason for guaranteeing the secret system of bidding to the sub and original contractor and to the owner as there is for guaranteeing the secret ballot to the elector. There is the same argument against submitting more than one bid on the same subject matter as there is against "repeating" at the ballot box. These conditions apply with equal force to bids submitted by the major contractor to the owner through the architect, and to bids submitted by minor contractors and material men to the major contractors.

If each contractor who submits a bid on any item to any person would exercise the necessary care in the preparation of such bid to insure himself that this bid represents the definite minimum for which he would be willing to accept the work, then the old bluff, "I have a lower bid," would not appeal to him. The submitting of bids to contractors' associations in advance of submitting them to the parties for whom they are intended constitutes a dangerous practice which is ultimately certain to lead to scandal. The reputable contractor should refuse to submit bids through any other sort of architect. The real general contractor does not peddle bids.

Sub-contractors and material men's associations should advise their members not to submit bids to so-called contractors who are known to peddle bids. They should go further than this. They should clearly state in their code of ethics that they consider it dishonorable practice for any competing contractor to secure information as to the bids submitted by other contractors, either through the architect's office, general contractor's office or from each other.

Within a few days after the contract is signed, all persons having to do with the award of the contract should make an announcement of the amounts of the bids submitted in order to satisfy the competing contractors as to the fairness of the award. Frank methods of this sort will do much to sustain the confidence which is essential to co-operation between architect, material man and contractor. Once the contract has been assumed, the contractor should immediately make out a program of construction to insure the completion of his work, after making due allowance for unforeseen delays, at the time fixed by the contract. He should purchase his materials immediately, making contract for delivery according to his schedule.

The contractor's monthly requisitions for payment should be accompanied by an accurate statement of the entire amount of work essential for the completion of the work and the proportionate part of that work already completed. With such a statement before him, the architect may issue the proper certificates without undue delay. One of the chief causes of delay in the issuance of an architect's certificate is the vague and indefinite statements accompanying contractors' requisitions for payment. In a large majority of cases through carelessness rather than evil intent, the statements submitted are misleading and are so worded as to make them impractical both to use as a basis for checking up the work already executed, as well as the work still to be completed.

It should be borne in mind that the architect's interest is not so much in the work already completed as it is the probable cost of executing the remaining work under contract. The architect is charged with the duty of reserving sufficient funds at all times to complete the contract and to secure all guarantees. With reference to the relation between the contractor and material men, it should be borne in mind that no warrantee on the part of the material men can be enforced unless the contractor is careful to comply strictly with the instructions of the material man, as to the manner of use or installation of the material covered by the warrantee.

Having thus frankly discussed the controlling factors essential to co-operation between contractor, material man and architect, what is to hinder immediate procedure along these lines?—Emery S. Hall in "New York Real Estate Record."

As The Editor Sees It

THE profession of architecture is as old as civilization, in view of which it is a bit disconcerting to be told that, in England, the first Architectural Club appeared about 1791 and the first architectural magazine in 1833. The current number of the *Journal of the American Institute* presents an article by Sidney Webb, Professor of Public Administration in the University of London, on the early records of architecture as a profession. The first known use of the term "architect," in English, according to Mr. Webb, was in 1563, when John Shute, on the title-page of what was, perhaps, the first book in English dealing with an architectural subject, styled himself "painter and architect." The title of this volume was "The First and Chief Grounds of Architecture, Used in All the Ancient and Famous Monuments, with a Further and More Ample Discourse Upon the Same than Hitherto Hath been Set Out by Any Other."

Inigo Jones (1573-1671) is said to have been the first definitely professional architect in England. For a couple of centuries after Jones the work of the architect continued to be but faintly differentiated from that of the master mason and building contractor. This applying to England, of course. In Italy architecture had long been intimately connected with the arts of painting and sculpture. Sir Christopher Wren, as late as the close of the seventeenth cen-

ture, combined with his work as an architect duties that are now allotted to the surveyor, builder and civil engineer. The architect seems not to have made any great headway professionally until the superseding by the contracting builder of the old order of master craftsman.

* * *

THE earliest of these contracting builders were architects and undertook both the planning and erecting of such jobs as enlisted their attention. Robert Smithson, one of these early worthies, described himself as "Undertaker and Overlooker." Robert Timmons, who designed Blickling Hall, Norfolk, is termed "Architect and Builder." Sir Thomas Chambers and Robert Adam contracted to supply not alone plans and buildings, but even to design and make the furniture and interior fittings.

George Cook, to whom we owe the foundation (in 1786) of the first professional journal, *The Builder's Magazine*, was one of those who, avowedly, combined the two callings of builder and architect.

It was not until the latter part of the eighteenth century that there gradually grew up a small group of practitioners, catering to rich noblemen and gentlemen of taste, who, in contrast to the "builder-architects" of the provincial towns, limited their functions to those of the architect as we now understand the term.

There was an Architects' Club, in London, from 1791 onward, made up of men of the profession who met at stated intervals at the Thatched House Tavern in St. James Street.

* * *

THIS organization seems to have been social and convivial rather than professional, and numbered such leading architects of the period as Robert Adam, Chambers, Soane, Wyatt, Milne, Dance and D. P. Cockerell. The London Architectural Society, established in 1806, appears to have been an organization, the chief aim of which was mutual improvement. Each member bound himself to produce annually an original drawing and essay for discussion. This society seems not to have lasted a great while or to have exercised any considerable influence.

The Architectural Society established in 1831 seems to have been a much more intelligently directed effort. This society planned to hold annual exhibitions and to found a school of architecture, but after eleven years of abortive effort went the way of its predecessors.

* * *

IN February, 1834, there was called a meeting of London architects and surveyors for the purpose of forming a new society for the study of architecture and architectural topography. In July of the same year the members who were architects decided to withdraw and form a separate organization,

which they did. They named the new body The Institute of British Architects. It was this group that in 1837 obtained a charter, styled itself the Royal Institute, was honored with an Annual Royal Medal in 1848, received new charters in 1887 and 1909, and is to-day the dominant architectural body of the British Empire.

A peculiarity of this organization worth mentioning is that in its earlier stages no one was permitted to join it who was not "by birth and social status, a gentleman." The Institute was not confined to professional architects. Talented amateurs were looked upon as highly desirable additions to its membership. It was supported largely by donations from wealthy patrons of its art. "Without and beyond the circle of its professional members," declared a published appeal, "it will at first be difficult to form and carry on such a society; so it would be forced to rely on the munificence which distinguishes so many noblemen and gentlemen in this country."

* * *

THIS reliance was by no means vain. For years the donations from these amateurs supplied more than half the annual revenue of the Institute. Earl de Gray was President down to his death in 1859 and not only took an active part in its proceedings, but entertained the members at his house and secured for them many courtly favors. The Institute appears to have fulminated bitterly at the practice of choosing architects by competition for the designing of public buildings.

In 1839, and again in 1843, the Institute thundered against this abuse, declaring that "there are few cases in which competition is anything but a convenient engine for fraud," and "that the modern practice of submitting designs in competing speculations for premiums, or for employment, or in any competition for preference, without specific or properly implied promise of certain payment to each and every competitor, operates injuriously upon architecture and upon the interests and character of the profession."

Mr. Webb remarks upon the fact that nowhere in these early records does he find any mention of the method of preparing for or entering the profession. In 1855, when a new metropolitan building act was passed, the Government entrusted to the Institute, as being the only available professional body, the duty of conducting the technical examination of architects who wished to obtain "certificates of competency" to hold the office of "building policeman" or Public Inspector of Building Plans in London, misleadingly styled that of District Surveyor, or, as various Local Acts put it, Building Surveyor.

IN the year 1859, when Earl de Grey died, a professional architect was elected to succeed him as president, new and more commodious premises were obtained, and the Institute entered into a new phase. The membership rapidly increased, especially in the provincial centers, and the Institute took on a more strictly professional character. The presidency was thenceforth held normally only for two years. The donations from wealthy amateurs, rewarded by Honorary Fellowships and Honorary Memberships, ceased to form an important item in the revenue. Though the Council of the Institute continued to be made up mainly of architects who had achieved opulence and distinction on the old lines, the Associates, and even the Fellows came to include more and more of the rank and file of men engaged in the erection of shops and factories, mills offices, and the mass of ordinary dwelling houses with which so much of the country was being covered. The technical and commercial aspects of the architect's duties obtained greater attention. The Institute was ceasing to be predominantly metropolitan in membership, and, moreover, it was not the only society to which architects could belong. The profession was, indeed, rapidly spreading to every large town.

* * *

LOCAL societies were formed in which architects could meet and discuss their common interests. In Dublin the Royal Institute of the Architects of Ireland had been established on the model of the British Institute as early as 1839. In the course of the next half a century local societies with divers titles were started in Liverpool (1842), Bristol (1850), Newcastle (1858), Edinburgh (1858), Nottingham (1862), Manchester (1865), Glasgow (1868), Leicester (1872), Birmingham (1873), Leeds (1876), York (1882), Dundee (1884), and Sheffield (1886), to be followed in 1890 by the South Wales and Devon and Exeter Societies, in 1898 by the Aberdeen Society, in 1911 by the Northamptonshire Society, and in 1912 by the Hampshire and Isle of Wight Association. These societies, which were completely autonomous, framed their own definitions of the limits of the profession, fixed for themselves the districts that they would take for their several spheres, elected their own students upon such qualifications as they chose, and, in some cases, added not only "Honorary Members" or "Honorary Associates," but also such new classes as "Lay Members," and "Associated Craftsmen," who are certainly not architects.

* * *

THESE local organizations—now known as the "allied societies"—were not hostile to the Royal In-

stitute, nor did they presume to be its rivals. On the contrary, they looked up to it as the premier society of the profession; and many of their leading members belonged to it as Associates or as Fellows. During the quarter of a century that followed on the expansion of the Institute in 1860, the numbers of these provincial societies—whether born and mainly trained there, or merely migrants from London who had settled in practice there—were, in fact, during the latter part of the nineteenth century, coming to constitute a considerable proportion of the Institute membership, which thus lost, by imperceptible degrees, its original character of a select group of personal acquaintances.

The embers of the Council of the Institute, who continued down to 1894 to be annually elected (and usually year after year re-elected) at the annual meeting of members in London, seem to have looked upon these changes with mixed feelings. There were some, even among the leading members, who wished the Institute to pass away from being merely a "subject association" and to take on avowedly all the functions of a professional association, aiming, for this purpose, at representing the whole profession and not merely its most distinguished or most successful members.

* * *

IN 1865, reverting for once only to the tradition of the first president, the Institute elected, not a professional architect, but that accomplished and distinguished dilettante, A. J. Beresford Hope, to fill the presidential chair. In his inaugural address the new president made for the Institution claims larger than its dominant members were then inclined to support. "I am ambitious," he said, "for the honor and usefulness of the Institute, and as the result of this ambition, I decline to remain where we are. . . . The Institute ought to be, *without rival and without demur, the central regulating areopagus of architecture*—as practiced by its professional votaries and as studied by the amateur—within this Imperial realm. The time should come when the absence of those letters which denote some grade in the Institute from the name of anyone who practices architecture should be as much the cause for inquiry as the absence of academic distinction from that of the clergyman who has the misfortune to be a Literate."

* * *

FROM this expanded slowly the Royal Institute of the present day with affiliation throughout the British Empire. Quite an interesting little historical glimpse backward, this Webb article. And one quite well worth the reading.

EDITORIAL NOTES

Announcement is made that contracts have been awarded for five of the huge army mobilization camps to be built at various locations by the United States Government, represented by Colonel I. W. Littell, Construction Quartermaster, Washington, D. C., and Major F. B. Wheaton, Advisory Architect, Washington, D. C., from plans prepared privately by Government architects and engineers. The camp at Ayer, Mass., will be built by Fred T. Ley & Co., of 52 Vanderbilt avenue, Manhattan; at American Lake, Washington, by the Heurley-Mason Company, Tacoma, Washington at Atlanta; Georgia, by Arthur Tufts, Atlanta, Georgia; at Columbia, South Carolina, by the Hardaway Construction Company, Columbus, Georgia; and at Wrightstown, N. J., by Irwin & Leighton, 126 North Twelfth street, Philadelphia, Pa.

* * *

California is leading the States in the amount of concrete construction placed under contract, so far having awarded the following work: Concrete roads, 1,047,720 square yards; streets, 113,120 square yards; alleys, 7,575 square yards; total, 1,168,415 square yards.

* * *

Ellis Soper, of the Cuban-Portland Cement Company, Mariel, Cuba, writes that by the aid of a steel tower 250 feet high some concrete foundations were poured 700 feet away. On account of the hot sun it was found that the use of a small percentage of hydrated lime was very beneficial in aiding the flow of the concrete. Making proper allowance for the relative elevations of the chute and the forms the inclination of the latter was found to be about 17 or 18 degrees. It is probable, on account of the great height, that the chutes were not easily accessible for cleaning or for the acceleration of the flow and that the flow was continuous and unimpeded. In any event, the horizontal distance spouted was nearly or quite a record and the height of the tower approaches the limit of economy and safety.

* * *

The members of the American Commission to France appointed to study reconstruction conditions abroad have just returned and report that there is an unquestioned demand developing for portable temporary buildings, materials for construction of permanent factories and residences, metal ceilings, window and door sash, Portland cement, lumber, rolled steel, and possibly basic clay products; in fact, any kind of material that will facilitate quick construction.

* * *

Officers for the ensuing year were elected as follows at the thirteenth annual meeting of the National Association of Sheet Metal Contractors, at Cleveland: President, George Harms, Peoria, Ill.; vice-presidents, Frank B. Higgins, St. Louis, Mo.; H. H. Lind, Cleve-

land, Ohio; T. P. Walsh, San Antonio, Texas; Otto E. Geussenhainer, Shelboygan, Wis.; secretary, Edwin L. Seabrook, Philadelphia, Pa.; treasurer, W. A. Fingles, Baltimore, Md. The trustees, including the three newly elected, are as follows: Louis Luckhardt, Pittsburgh; Edward Hildebrand, Denver; Sam Menezzer, Fort Worth; Frank B. Hiller, Cleveland; D. M. Haines, Chicago; John H. Hussie, Omaha; Alfred Holtman, Kansas City; Julius Geroek, St. Louis; Paul F. Brandstedt, Washington. Milwaukee was selected as the 1918 convention city.

* * *

At the annual meeting of the National Warm Air Heating and Ventilating Association these officers were chosen: President, D. Rait Richardson, New York; vice-president, W. G. Wise, Akron, Ohio; secretary, Allen W. Williams, Columbus, Ohio; treasurer, I. L. Jones, Utica, New York; Executive Committee, E. P. Miller, W. L. Dawbarn and George L. Wilkinson. John D. Green was unanimously elected an honorary member of this committee.

* * *

The Hart Manufacturing Company, manufacturers of heating and ventilating systems for school rooms, theatres, railroad stations and other public buildings, is moving its plant to Louisville, Ky. The company formerly was located at Arlington Heights, Ill., but recently incorporated under the laws of Kentucky, and decided to move its plant to the new location. Its pay roll will aggregate \$50,000 a year, and it will have representatives throughout the United States. It has recently signed a government contract for \$42,000 worth of work, including the making of pipe and field ovens. A. E. Hart is president of the company; D. E. Gordon, vice-president, and H. K. Cole is secretary-treasurer. C. E. Olson is the general sales manager.

* * *

Thomas W. Pearson, widely known from his connection for a number of years with the Williamson Heater Company, has recently associated himself with the W. E. Lamneck Company, manufacturers of furnace pipe and fittings, furnaces and the like, Columbus, Ohio. Mr. Pearson is manager of sales, and will look after the marketing of the new product of the Lamneck Company. This company recently entered the furnace pipe and fittings field, and has a new design of double wall pipe, as well as other styles, which has several distinctive features.

* * *

The "Guide" will publish in its issue of Wednesday, August 1, a copy of the ordinance relating to building material on the public highways passed recently by Philadelphia Councils and approved by the Mayor. Builders will be wise to familiarize themselves to some extent with the provisions of this legislation.

One of the most attractive sidewalk structures erected by a local builder in many a day is that set up by Messrs. George & Borst at Thirty-second and Market, where they are constructing what, it is claimed, will be, when finished, the finest warehouse building in the world. The stand is neatly latticed, painted attractively in green and white, embellished with flower boxes holding growing plants and bears an artistically lettered inscription setting forth the name of the builders and the class of work upon which they are engaged. It is not merely neat and engaging. It is of the very essence of good advertising.

* * *

An army of workmen is busy finishing the buildings that will comprise the first unit of the Worth Brothers Steel Company plant at Claymont, seven miles north of Wilmington, Del. A large rolling mill is being roofed over and all the steel structural work for it has been completed with the exception of some supplemental steel girders in the interior. The foundations for another building are being laid. It is reported that the company expects to duplicate in improved buildings and machinery its former Coatesville, Pa., plant.

* * *

A new suit over the question as to whether or not Philadelphia shall be put to hundreds of thousands of dollars of expense by having stone for public building cut here is threatened. Such a suit would again delay work on the planned Free Library on the Parkway with the probable result of the building costing a great deal more than present estimates, which are \$304,698 in excess of figures of three months ago.

No sooner had the construction work been awarded to John Gill & Sons, of Cleveland, at \$2,535,000 than Frederick C. Newbourg, Jr., counsel for Walter R. Taylor, announced that as over \$100,000 could be saved the city on the contract, if the stone were cut outside the city, he would raise the issue as to the constitutionality of the ordinances making the cutting of stone in Philadelphia compulsory.

Some time ago a suit started by Walter R. Taylor prevented the letting of the contract to the George E. Fuller Company at \$2,664,395. The same work, according to present estimates, will cost the city a total of \$2,969,395. Both figures include heating, plumbing and electrical work. The threatened suit is likely to hold up work for several months, and in the event of its success the new contract will be annulled and a third letting will become necessary.

In justification for the delaying tactics, Attorney Newbourg declares that to allow the stone to be cut in Philadelphia for the Free Library, Art Museum and Convention Hall would cost the city and taxpayers \$500,000. City officials claim that the loss due to delays occasioned by the suits will be in excess of that total.

* * *

Work has started on tearing down of a score of firetraps, to avoid fires, at Pottsville, Pa. The walls of the Slater Theatre, burned

a year ago, are also being torn down, by direction of State officials, as they are a menace to pedestrians.

* * *

Through the Philadelphia Subway Construction Company, the Vares underbid the Keystone State Construction Company, in which Senator McNichol is dominant, on constructing the new Northeast Sewage Disposal Works, Port Richmond, by \$127,790. Tabulation of the proposals, received was completed in the Department of Public Works and shows the aggregate of all items to total: Philadelphia Subway, \$919,700; Keystone State, \$1,047,490. There were no other bidders. Director of Public Works Datesman will award the contract in a few days, and there is no doubt the Vares concern will get it.

This is the first time these two companies, controlled by rival political leaders, have contested each other for a big public improvement contract other than transit work. The Philadelphia Subway Construction Company, it is said, was organized by Senator Vares primarily so he could compete with McNichol for contracts to build sections of the Broad street subway, and it obtained one of those awards.

The success of the Vares concern in obtaining the contract for the sewage disposal works is of special significance, because the northeast plant is a forerunner of others. The cost of the city's entire sewage disposal system, according to present plans, may go as high as \$25,000,000.

It often happens in case of large municipal projects that the contractor on an early section of work gets valuable experience, which enables him to put in low bids for succeeding contracts. There was allowed in the loans authorized last year \$3,200,000 for furtherance of the system.

* * *

Options and actual transfer have been obtained for land north of the Westinghouse plant at Essington for the great Government shipbuilding plant, which will be built by the American International Company, of the National City Bank. This plant, probably the greatest in the world, will employ 15,000 men and is to comprise fifty shipways.

* * *

J. V. W. Reynnders, of New York, formerly vice-president of the Pennsylvania Steel Company, appeared in court at Harrisburg last week to press his claim to a fee for \$50,000 as a receiver of the Central Iron and Steel Company of that city. The McCormick interests are interested in the company, and Vance McCormick, Democratic National Chairman, and other members of the family were present at the hearing. The case was continued until September 11.

* * *

Settlement will be made in a few days by Samuel Taubel for Horticultural Hall, adjoining the Academy of Music, which he purchased recently from the Horticultural Society for \$550,000. The building occupies a lot 90 feet on Broad street at the corner of Manning street, with a depth of 200 feet. A large sign which has been mounted on the

front of the building within the last few days makes the announcement that a theatre to seat 1,800 persons will be built on the rear of the lot, with two store and office buildings on the front entrance. The theatre, it is stated, will be ready to open on January 15, 1918.

* * *

W. S. Jones, of 5144 Wayne avenue, for many years connected with the general sales department of the Midvale Steel Company, has been elected vice-president of the Vanadium Alloys Company, of Pittsburgh and Latrobe.

* * *

The Pennsylvania Railroad is working under Government rush orders with all the speed at its command on the \$2,000,000 construction of a new double-track line, including a \$300,000 concrete bridge across the Schuylkill to Girard Point, connecting the 900-acre site of the big Government shipbuilding plant at Essington on the Delaware with its Philadelphia, Baltimore and Washington Division at Marcus Hook on one end and the Girard Point freight and river terminal on the other. The James McGraw Company, of Philadelphia, which has the contract for the entire line, is working from 700 to 800 men to-day, and hopes to have 1,5500 on the whole line of construction before long.

* * *

No increases in fire insurance tariffs for Pennsylvania are contemplated for the immediate future, it was stated after a meeting at the Hotel Traymore, Atlantic City, of the Executive Committee of the Underwriters' Association for the Middle Department. Fred Walker, chairman, of Harrisburg, presided over the preliminary Executive Committee session, which formulated matters for presentation to the main body, of which R. M. Stuart, of Philadelphia, is president. Pennsylvania has been a profitable field for fire insurance operations during the last four months, according to the special agents.

HOW TO BUILD HOUSES TO RETAIN HEAT.

When a man builds a house in which he is likely to spend a half or more of his days, it is a matter of some little importance to him that it be built well—not merely that it be built so that it will not fall down, but so that it will leak neither water nor weather. A leaky house is a misery and a misfortune. It is almost sure to be a permanent liability.

In building remember that no roofing is too good to cover your head. He who thinks to save money by using a cheap grade of shingles has much to learn at large cost. Shingles are not necessarily right because made of West Coast cedar, not because marked "Extra Star A Star." Before you buy shingles for your house, have the lumber merchant show you samples of all his stock. If he has a large variety, and something ultra good, order the best he has. A "thick clear" red cedar shingle on a not too flat roof will be found one of the most satisfactory roofings ever put on a dwelling.

Don't Experiment with Roof.

There are other good roofs, some of them better than shingles, perhaps, but if you don't know how good they are, insist on seeing the material and on interviewing men who have used them before trying an experiment with them yourself. A leak in a roof is one of the most prolific causes of a chronic profane temper in the householder. A leak in the roof is worse than a rat in the walls, harder to locate and harder to be rid of.

There is also a science in the laying of roofs. Study that seriously before your roof is laid and see that it is laid scientifically. A careless or dishonest workman may make a bad roof of the best roofing material.

Next to water leaking through the roof, your worst elemental enemy is wind. Weather leaks through the siding and about the windows and doors are leaks in your purse. It is not an uncommon thing in any city for a householder to throw two tons of coal every winter through the cracks in his house.

Two tons of coal at \$10 a ton is equal to the interest at 5 per cent. on \$400. Forty dollars added to the cost of material and labor put into the leaky house would have saved all this coal. When you are planning your house take a day off and look at all the varied kinds of felts and papers, fixtures and fabrics that are on display designed to "stop a leak to keep the wind away." Among them you will find something vastly superior to the old tar paper and back plaster, and something that will probably cost you no more money. Remember this, that builders these days know better how to build a weatherproof house than they did 20 years ago. Don't let any behind-the-times contractor build your house.

Here is something worth remembering. An attic floor with insulation is one of the best fuel savers ever devised. Build two houses side by side just alike except that one has an attic floor insulated and the other no attic floor at all, and when snow is on the city roofs and temperature at a certain point, you will see the snow melt on one of the roofs and not on the other. The coal bill in one will be larger than in the other. It costs money to melt snow on your roof.

If you buy a house already built assure yourself that its roof is waterproof and its walls weatherproof. Know that the man who built it is an honest builder. If ever you find yourself obligated to pay for a home with unmendable leaks in it the knowledge of the leaks will cut down your enjoyment of the home even more than the leak will drain your purse. Any construction that will save fuel is cheap, for fuel will be continuously dear. Two tons of coal a year will pay the premium on a snug little life insurance policy.—"Heating and Ventilating Magazine."

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Stable, Garage and Repair Building, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. The Tenants' Needs are The Builders' Guide

The house piped throughout for gas provides the tenant with five of the big factors in modern housekeeping:—

The Gas Range—clean, economical cooking.

Incandescent Gas Lighting—restful, eye-saving.

The Gas Water Heater—hot water for all purposes.

The Gas Iron—takes the mileage out of ironing.

Gas Heating Stoves—for quick, short period, auxiliary heating in Spring and Fall when it isn't practical to keep the heating system going all day and night.

As The Editor Sees It

AS the result of conditions growing out of the war many building firms show a disposition to abandon the system of competitive bidding. In many cases this course is largely dictated by ordinary commercial prudence, the fluctuations in the prices of materials and labor and the difficulties about deliveries being such that the general contractor feels a natural hesitancy about placing himself at the mercy of his sub-bidders. The system favored, under existing conditions, is what is known as the percentage system, an arrangement whereunder the owner agrees to pay the general contractor on a basis of the actual cost of labor and materials plus a fixed percentage ample enough to take care of overhead, supervision and profit. In a recent number of *The National Builder*, Mr. G. D. Crain, Jr., discusses the percentage system with a clearness that brings its most salient characteristics within the range of the understanding of the lay reader.

* * *

THE extent to which the percentage system of handling building contracts is being used, especially on smaller jobs, such as residences," writes Mr. Crain, "is indicated by the fact that one of the leading building concerns of a southern city reports that over 90 per cent. of its work is now being done on that basis.

"An interesting discussion of the mer-

its of the plan is contained in a letter sent out by the company to its customers, in which the following language appears:

"We all agree that what the average person wants when making a purchase is to get his money's worth. He is willing that the seller should have a legitimate profit over and above his cost of material and labor and expense of conducting business. We want you to get acquainted with our method of building.

"Building, like other lines, has undergone changes in recent years. Formerly competition was so keen that many builders, in order to get work, simply neglected the matter of overhead, and undertook work that caused them losses, and then wondered why they made no better progress. We have gotten away from that and are following largely the cost-plus-percentage method to the satisfaction of a large number of our clients. The fact of the matter is that at present over 90 per cent. of our large volume of work is being done on this plan.

"By this method we guarantee our figures and you have the advantage in the first place of knowing the maximum amount that you will have to invest, and then of enjoying the anticipation of a possible saving, as in nearly every case we have effected one, ranging all the way from 5 to 20 per cent."

THE system, as indicated, involves taking the work on a basis of the cost-plus-percentage, which includes overhead, supervision and profit. The amount of the margin varies, but 15 per cent. is about the average at which most jobs of this kind are handled. The maximum figure which is named on the job is usually the architect's estimate; and while one possible advantage of the percentage system, from the standpoint of the builder, is that he is protected in case of unusually expensive features unexpectedly developing, the company above referred to has found that the estimate is ordinarily sufficiently liberal to enable it to be used as a maximum basis on which to figure the work.

"The defects of the system of competitive bidding are obvious. The man who knows least about the cost of doing the work is often the successful bidder—for this reason. The percentage system enables the owner to discriminate and to select the concern which has earned a reputation for good work and reliability, as he is then protected from excessive costs by the arrangement described. In other words, a premium is put on good work, rather than merely on the ability to bid low.

* * *

THE average owner is willing that the contractor make a fair profit on his work; and it is also plain that if a contractor sees that he is likely

to lose money on a job he will be tempted to 'cut the corners' wherever he can for the sake of making his net loss as low as possible. This does not always happen, of course; for many concerns would rather lose money on a piece of work than risk losing the good-will of the customer. Nevertheless, the temptation to slight the quality, when it is found that a bid which is too low to cover the cost has been made, is present, and it doubtless has its effect in a good many cases.

"On the other hand, the very fact that the wise contractor appreciates the risk involved in bidding, since it is never possible to anticipate every feature which may arise, means that a larger margin must be allowed to take care of the unknown quantities than would be necessary if every point were covered by the bid. The contractor who would be willing to make 15 per cent. 'for sure' on every job will probably allow 25 per cent. in bidding in order to take care of the unexpected difficulties that may arise, and also to take care of other jobs where the net had been considerably below the expected profit."

* * *

GYPSUM has attained a remarkable growth in popularity, as an important medium in building construction within the past few years. The Federal Government reports that nearly half a million tons of unclaimed gypsum is sold annually, "the bulk of it being used for retarder in Portland cement."

"Calcined gypsum," to quote the government's latest report, "amounting to about a million and a half tons annually is used as wall plaster. This use, and the qualities of the plaster, such as hardness, quick set, fire resistance and poor conductivity of heat and cold, are so well known that further discussion will not be given here. The making of gypsum board, tile and screed is the newest branch of the industry and has not yet attained any considerable proportions; at least, the total value of the annual production of this material is probably less than \$200,000. The statistical cards sent out by the Geological Survey do not ask specifically for reports on these products. Nevertheless, the reports for 1915 show that they were made at twelve plants in that year."

"Gypsum plaster boards are of various types, mainly consisting of gypsum mixed with fibrous binding material to give strength and toughness for effective nailing. A type of plaster board in common use consists of four alternate layers of wool felt, with three intermediate layers of gypsum. Other boards contain but two layers of felt, with a gypsum layer between. In order to meet the joint and stud facing of standard construction, plaster boards are

usually 32 by 36 inches (8 square feet) and are made one-fourth, three-eighths and one-half inch in thickness. The wool felt binding material forming the outside surface of the plaster boards is an excellent bonding surface for gypsum plaster. Plaster boards are used for lathing in place of wood or metal lath on surfaces that are to be plastered, and where high fire-resistive construction is required. In fireproof construction the plaster boards are fastened to metal studs or hangers by metal clips. On surfaces not to be plastered plaster boards are used for deadening sound by being laid between rough and finished floors; as sheathing boards by being nailed to the studding and behind the clapboards; as outside stucco covering; as insulation and fire resistance under wood shingles, in air ducts and in dumb-waiter shafts.

* * *

GYPSUM floor screeds are used as a nailing sleeper for floors. They are 2 by 3 inches and 8 feet long and weigh 2 pounds per linear foot. They do not rot or burn.

"Gypsum tile is made for partitions, floors, roofs and furring. Partition tile, solid or hollow, is 12 by 30 inches wide and 2 to 8 inches thick. These tiles, laid with gypsum plaster, are used in the highest type of fireproof building for dividing and corridor partitions, in elevator and stairway inclosure and in dumbwaiter shafts; they are light in weight, can be laid very rapidly, can be cut with a handsaw, and when plastered with gypsum make partitions of high heat-resistive value.

"Gypsum floor tile is a hollow box or dome of reinforced gypsum plaster, used as a filler between concrete joist construction. These tiles are 19 inches wide and 24 inches long, 7, 9, 11 and 13 inches high, and weigh 24, 27, 30 and 33 pounds per linear foot; they afford a saving in dead weight of construction and provide a smooth, all-gypsum ceiling to plaster upon.

* * *

GYPSUM roof tile is made 24 and 30 inches long, 12 inches wide, and 3 inches thick, and is laid between supporting 'T' irons. Larger gypsum roof tile, reinforced and made of especially hard gypsum, are made to span 4 feet and are laid upon the main roof purlins. These tile are 4½ inches thick, 18 inches wide, and of biscuit pattern. All these roof tiles weigh 13 pounds per square foot and are light and noncondensing. The low heat conductivity of gypsum is an especially valuable quality in a roof deck. Slate or any other roof covering can be nailed or otherwise secured to the smooth decks of gypsum roof tile.

"Gypsum furring tile are of the same character and general dimensions as the

partition tile, are hollow or solid, and are 2 inches thick. They are fastened to the wall by nailing and are used for sound absorption and sound-proofing, fire protection, insulation from heat or cold and damp proofing."

Other uses for calcined gypsum which have been in practice longer than those just described, are in making statuary and other art work, relief maps and models, molds for rubber stamps, molds for pottery and terra cotta, in bedding plate glass for polishing, in foundry molds for special castings, and in making surgical casts. Calcined gypsum enters into the composition of match heads, hat blocks, relief decorations for walls and ceilings, asbestos pipe covering, and is used for various other purposes.

* * *

AN interesting little sidelight on the advance which has taken place within four years in the cost of material and labor is contained in an item in the *San Francisco Architect and Engineer*. The item runs:

"Mr. August Kehrberger, one of the best known Salem, Oregon, contractors, has some interesting figures to show the increase in cost of construction for the past four years. Among his other investments Mr. Kehrberger has built for himself a number of houses for renting purposes. Each two years he has added a new house, using the same plans. The house built in 1913 cost \$1,800, that in 1915 \$2,075, while the one built in 1917 cost \$2,600."

* * *

THE same number of this bright Pacific Coast magazine contains an editorial article, captioned "Don't Lose Your Head," that is very timely and appropriate as matters now stand. It is so timely and so very apropos that I am going to quote it.

"In every crowd there is always somebody who is ready to yell 'fire!'" runs the article. "Then the panic starts. When order is restored, everybody wonders why everybody else lost his head.

"When President Wilson issued his war proclamation and called upon the people of the United States to conserve their resources for the struggle ahead, he did not mean that they should stop spending money. He did mean that useless expenditures should stop, but that was nothing new. Business consists of buying and selling. Certain kinds of business are fundamental. The building business is one of them.

"There need be no curtailment in building or road construction. Let both public and private useful building construction proceed. Production and handling of building materials and public and private construction work are fundamental industries of the country.

Any tendency to suspend or postpone building projects is inconsistent with maintaining our prosperity. The country is prosperous. Building investors should not hesitate to go ahead with their plans. Railroads should spare no effort to supply the building industry with the cars needed to transport materials. Government, State, county and municipal authorities should encourage the continuance of all kinds of building. Road and street improvements in particular should go on unabated. Bad roads and streets are factors of first importance in the present high cost of foodstuffs. Never before was the improvement of highways so essential.

"The lumber, brick, cement, lime, sand, gravel, stone and other building materials industries are basic. Neither Government regulations nor railroad re-

strictions should be imposed unnecessarily to interfere with them. If any action is taken which results in the prostration of so fundamentally important industries, there is real danger of a surplus of unemployed labor, a surplus of railroad cars and a crippling of business that will seriously embarrass the Government in financing the war."

* * *

ON another page of this number of THE GUIDE will be found the text of the new ordinance passed by Councils and approved by the Mayor governing the occupation of highways with construction material. This ordinance is, as a careful reading of it will disclose, much more comprehensive than any preceding regulation dealing with the same subject and should be of very great interest to local builders.

BUILDING MATERIAL ON THE PUBLIC HIGHWAY.

The New Ordinance Relating to the Storing of Building Material on the Streets, Pending Use, Drastic and Far-reaching—Method of Obtaining Permits—Limit Placed Upon Street Area Which May Be Utilized. Shelter Platforms, Lamps and Signals Provided For.

A new ordinance establishing rules for the use of the city streets or any portion thereof for the temporary storage of building material has been passed by Select and Common Council, and was signed by Mayor Thomas B. Smith on the 10th day of July. The ordinance, in full, is here given:

AN ORDINANCE TO PROVIDE FOR THE granting and regulating of permits for the occupation of highways with construction materials, fixing the charges therefor, and providing penalties for violation thereof.

Section 1. The Select and Common Councils of the City of Philadelphia do ordain, Application for, and Issuance and Exhibition of Permit: That when any person, firm or corporation shall desire to occupy a portion of the public highways within the City of Philadelphia for the temporary storage thereon of construction materials to be used in connection with the construction or repair of any building, footway pavement or other structure, the prospective permittee shall make a formal application to the Bureau of Highways, indicating the nature and extent of such contemplated construction or repair work, for the accommodation of which it is desired to so occupy the highways, and thereupon the Chief of the Bureau of Highways may issue a permit to occupy such a part of any public highway as indicated in Section 2 of this ordinance for the purpose aforesaid, for such period of time as he shall deem necessary and reasonable. For the information of the representatives of the Bureau of Highways, the Bureau of Police, and the public, the permit notice card, must be displayed by

the permittee in a conspicuous location on the occupied highway at all times during the period of such occupancy.

Sec. 2. Storage of Construction Materials: That construction materials authorized by permit to be temporarily stored on the highways shall not exceed in extent of occupied area the dimensions of the frontage of the premises about to be built upon or repaired (except that when no objection is made by the adjoining property owners and the space is not to be used for storage of materials other than that to be used in reconstruction, the permittee shall be permitted to occupy an additional thirty (30) feet on each side of the building frontage for which the permit is granted), and not exceeding 9 feet in breadth, 13 feet in height and 1 foot inside the curb line, with a gutter left along the curb 15 inches in width and 12 inches in height, with a clean-cut hole 12 by 18 inches in size, placed every 25 feet of length: Provided, That on narrow highways a sufficient passageway shall at all times be left unencumbered between the outside limit of the stored materials and the opposite curb for the free passage of vehicles. And, provided, That no materials, structures or other obstructions shall be placed within 5 feet of any fire hydrant or highway intersection or crossing, or within 2½ feet of any railway track, or across any footway. And, provided, That such permit shall not be construed to authorize the permittee to store any old materials, rubbish or dirt on said highways, except such as are to be re-employed in the previously indicated construction or repair operations: And, provided, That no per-

mit shall be issued to occupy any highway with building construction materials in that portion of the City between and including Spring Garden street, Fifth street, Green street, Delaware River, South street, Schuylkill River and on Broad street, between Lehigh avenue and Washington avenue.

Sec. 3. Footway Shelter Platforms: That during the erection or repair of any building, it shall be the duty of the permittee to cause to be placed a wooden footway shelter platform, which shall extend along the whole frontage of such building about to be erected or repaired, and which shall project from 2½ feet from the wall thereof to the curb or outer line of the footway pavement, and to be at least 10 feet in height from the curb or surface of the footway pavement, and shall be of sufficient strength to intercept the falling of bricks, stone, iron, lumber or other building materials or debris. Footway shelter platforms must be in accordance with the drawings and specifications as approved by the Bureau of Building Inspection, and on file in the Bureau of Highways, and must be painted in oil a dark green. Advertising signs will not be permitted on footway shelter platforms, except those containing the names of the general contractor and the future tenant, and these signs shall be erected in conformity with the standard size and design approved by the Art Jury (sign to be painted green and white and not larger than 6 feet by 4 feet). In no case will any other signs be permitted, nor will the approved signs be allowed to extend below the roof deck of the shelter platform. The Chief of the Bureau of Highways shall have authority to grant permission for the temporary closing or enclosing of a footway where he may deem this a safeguard during the demolition, construction or repairing of any building.

Sec. 4. Danger Lamps and Signals: That all persons or agencies temporarily storing construction materials of any kind, or any other obstructions, or making excavations, upon or across any public highway, shall place and maintain thereon, from sunset to sunrise, a lighted red lamp, and whenever such obstruction or excavations exceed 10 feet in length or breadth, one such lamp shall be placed upon each end, thereof, and at such other locations and intervals as may be necessary to properly warn and safeguard traffic.

Sec. 5. Mortar Beds and Material Heaters: That no person or agency shall place any lime or cement mortar, or mixtures, or mortar or concrete beds, or lime boxes, or shall make any fire for the melting of solder, or for the heating of roofing material, or for any other purpose, on paved public highways: Provided, however, That mortar or concrete may be mixed in boxes, the bottoms of which must be tight, tongued and grooved boards, placed on substantial bearers, leaving an air space of at least 4 inches, and protected on all sides by a margin of 2-inch boards extending not less than 6 inches in height above the floor surface.

Sec. 6. Conditions of Occupied Highways:

That the permittee shall store the materials occupying the highway in such a manner as to prevent their creating dangerous conditions or a nuisance or encroaching outside of the limits authorized by the permit. The permittee shall also maintain both the occupied area and the areas adjacent thereto in a cleanly condition satisfactory to the Chief of the Bureau of Highways, and shall promptly remove all dirt, sweepings, waste materials, rubbish or other debris that may be produced or accumulate, and, if necessary, sprinkle the occupied area and that adjacent thereto as often as may be necessary to eliminate any dust that may result from the exercise of the privileges granted by the permit. All offenders against the provisions of this ordinance will be prosecuted in accordance with the provisions herein and when necessary the Chief of the Bureau shall remove at the expense of the permittee or owner of the abutting property any construction materials, dirt, sweepings, waste materials, debris, or rubbish arising from the exercise of the permit privileges, or of any structure, fixture or obstruction found on any of the highways of the City of Philadelphia contrary to the provisions and requirements of this ordinance.

Sec. 7. Permit Charges: That at any time when the said permit shall expire, if it shall appear necessary that a further use of the highways is required, for the purposes for which said permit was originally granted, the Chief of the Bureau of Highways shall, upon the original application made, extend such permit from time to time, and upon the original issue and extension of every permit the applicant shall pay to the Receiver of Taxes for the use of the City of Philadelphia, the following sums:

Unpaved Streets: For permits to occupy unpaved highways with construction materials, the following charges shall be made monthly: For one building of 40 foot or less frontage, two (2) dollars per month; for additional frontage of the same building the sum of one (1) dollar per month, for each additional 40 feet or fraction thereof; for more than one building when immediately adjoining the first building or buildings, a charge of twenty-five (25) cents per month for each additional building.

The following charges may, at the option of the builder, be made for the entire term of the building operation:

For one building of 40 foot or less frontage, the sum of four (4) dollars for the entire term of the operation; for additional frontage of the same building, the sum of two (2) dollars for each 40 feet or fraction thereof for the entire term of the operation; for more than one building, when immediately adjoining the first building or buildings, a charge of fifty (50) cents for each additional building for the entire term of the operation.

The maximum charge for an entire operation on one side of the street and within the ordinary city block, between two main highways, a charge of six (6) dollars for the entire term of the operation.

The maximum charge for an entire operation on both sides of the street and within the ordinary city block between two main highways, a charge of twelve (12) dollars for the entire term of the operation.

Paved Streets: For permits to occupy paved highways with construction materials, the following charges shall be made monthly: Three (3) dollars per month for the first building having a frontage of forty (40) feet or less, and two (2) dollars for each additional building, when immediately adjoining the first building or buildings, having a frontage of forty (40) feet or less; for the second and succeeding months, two (2) dollars per month for the first building and fifty (50) cents per month for each additional building when immediately adjoining the first building or buildings: Provided, That if the operation does not exceed one year in duration the total charge to be made against any builder for all operations on one side of an ordinary city block between two main highways shall in no case exceed twenty-five (25) dollars, and if both sides of the block are occupied, shall not exceed forty-five (45) dollars. If, however, the year is exceeded, the maximum charge to be made against any builder in a city block shall be three (3) dollars per month if one side of the street is occupied, and six (6) dollars per month if both sides of the street are occupied, for each month in excess of the year.

Shelter Platforms: In the section of the City where building material is prohibited upon the streets, and footway shelter platforms are required, the following charges will be made per month:

\$2.00 per month for any frontage less than 40 feet.

\$3.00 per month for any frontage of 40 feet and less than 60 feet.

\$4.00 per month for any frontage of 60 feet and less than 80 feet.

\$5.00 per month for any frontage of 80 feet and less than 100 feet.

In other words, one (1) dollar additional for each and every 20 feet additional building frontage.

Sec. 8. Revocation of Permits: That the Chief of the Bureau of Highways shall have authority and power to immediately revoke or annul any permit when, in his opinion, the privileges of the permit have been abused or the provisions and requirements of this ordinance violated, or when any construction or repair work is so far advanced as to render any further occupancy of the highways unnecessary.

Sec. 9. Violation of Ordinance: That if any person or agency shall occupy any part of the public highways in the City of Philadelphia with construction or other materials or obstructions without a permit as aforesaid, or shall so occupy the highways after such permit has expired, or if, having obtained such a permit, shall occupy said highways in any way, or for any purpose contrary to the provisions and intent of this ordinance, or shall otherwise violate the provisions of this or-

dinance, the permittee and the owner of the abutting property for the accommodation of which any highway shall have been used, or the permit shall have been issued, or either of them shall forfeit and pay the sum of ten (10) dollars per day for each any every day the violation exists, which shall be sued for and recovered in the manner as penalties for breach of ordinance are by law recoverable.

Sec. 10. All ordinances or parts of ordinances inconsistent herewith be and the same are hereby repealed.

Approved The Tenth day of July, A. D. 1917.

THOMAS B. SMITH,
Mayor of Philadelphia.

No. 625.

AKRON AND ERIE AHEAD.

The nine cities in Federal Reserve district No. 4 show an increase in building operations for April, 1917, compared with the same month a year ago of \$326,601, but a decrease of 438 in number of building permits. The credit for pulling the nine cities out of the hole is due to Akron with 81.3 per cent, and Erie with 143.9 per cent, increase. The other seven cities ranged from Toledo with 1 per cent. to Columbus with 54 per cent. decreases. Cleveland's decrease was 6.7 per cent., or in money \$163,555. Cleveland's May showing involved an increase of \$608,565, which overcomes the April deficiency several times. The April total for the nine cities was \$9,969,549; number of permits, 5,308. The cities are Akron, Cincinnati, Cleveland, Columbus, Dayton, Toledo and Youngstown, Ohio, and Erie and Pittsburgh, Pa.

"The decrease in number of permits and valuations," the report says, "except two, as indicated in the table, is due to the late spring."

On the subject of industries the report says that: "Practically all plants and factories report 'business as usual.' In the iron and steel trade, the demand and prices are maintained at the highest point in all time. Lack of available transportation, both for raw materials and finished products (although this condition is no wimproved), is curtailing operations to some extent, and in some localities inadequacy of labor has a detrimental effect. Improvements are noted in methods of production, which offset largely the labor shortage, and the reports indicate proposed plant extensions, especially for plates for shipbuilding."—"Ohio Architect."

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

Are you aware, Mr. Advertiser, that this paper circulates in 5,000 offices, reaches every architect of any prominence in the East and the Secretary of every architectural club and chapter in the country?

BOTH PHONES

Why we guaranteed these roofs for twenty years—

THE three new sub-stations of the Commonwealth Edison Company in Chicago, illustrated herewith, carry Barrett Specification Roofs and are guaranteed by a Surety Bond for twenty years.

We know, from an experience of over fifty years, that Barrett Specification Roofs will greatly outlast the guaranteed period, and therefore do not hesitate to give this Surety Bond.

No other roofing is guaranteed in this way because no other manufacturer, evidently, cares to take the risk of having to repair and replace his roofs if they fail.

The reasons for their long life are:

First,

because they are constructed of Barrett Specification Pitch and Felt, the greatest waterproofing materials known.

Second,

because a greater amount of this waterproofing is used in Barrett Specification Roofs than in any other kind of roof-covering, and the amount of waterproofing material in the roof largely determines its life.

Third,

because under the 20-Year Guaranty Plan the roof must be constructed under the supervision of our inspectors, and we know, therefore, it will be constructed right.

That is why these roofs last twenty years and more; that is why we can afford to give a Surety Bond Guaranty with every one.

The 20-Year Guaranty Bond

The 20-Year Guaranty is now given on all Barrett Specification Roofs of fifty squares and over in all towns in the United States and Canada with a population of 25,000 and over, and in smaller places where our Inspection Service is available.

Our only requirements are that The Barrett Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us.

Copy of The Barrett 20-Year Specification and further information promptly furnished upon request.

When Buying a Home

insist that the house is piped throughout for gas so you can take advantage of the ease and economy of cooking, heating water and ironing with gas.

And a Baseboard Gas Outlet in each room is just the thing for connecting floor or table lamps and also provides a ready means for using gas heating stoves in the early Fall and late Spring when it isn't practical to have the house heating system going all day and night.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 16, 1917.—Sealed proposals will be opened in this office at 3 P. M., August 20, 1917, for the extension and remodeling of the United States Post Office (old) at Pittsburgh, Pa. Drawings and specifications may be obtained from the custodian at Pittsburgh, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 19, 1917.—Sealed proposals will be opened in this office at 3 P. M. August 30, 1917, for the construction of the United States post office at Franklin, Pa. Drawings and specifications may be obtained from the custodian of the site at Franklin, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 24, 1917.—Sealed proposals will be opened in this office at 3 P. M. September 4, 1917, for the construction complete of the United States post office at McKees Rocks, Pa. Drawings and specifications may be obtained from the custodian of site at McKees Rocks, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

Convertible Wye Level

A very reliable instrument for Architects and Contractors.

12-inch achromatic telescope, cross hairs, sun-shade and cap. Clamp and tangent to vertical axis, horizontal circle to degrees, by vernier to 5 minutes.

Other transits from \$15 to \$115.

Serviceable.

Durable. Will hold adjustments

As The Editor Sees It

THE advancing cost of materials used in building is in a fair way to be made the subject of federal investigation. At a recent meeting of the Kansas City Chapter of the American Institute of Architects a resolution was adopted requesting the government to institute such an investigation. Attached to the resolution was a summary of the prices of certain materials during the three year war period showing the rises which have taken place over normal standards. Commenting upon the action of the Kansas City Chapter the *Journal of the American Institute of Architects* remarks:

Accepting the mounting price of steel as a conspicuous reflection of the many factors which the war has injected into the whole industrial situation—profit-taking through unusual cost and labor shortage—we may await the result of the Federal Trade Commission's investigation of steel prices with confidence that it will throw much light upon a situation which is now so obscure as to engender and nourish suspicions. The President, in his statement of July 12 frankly stated that profiteering is not only crippling the prosecution of the war but, in many lines, is materially restraining industrial activities, the successful continuance of which is just as essential in providing the money to pay for the war. As in every calamity the profit-takers are busy rifling the pockets of those who are helpless to prevent it.

But the general condition is well summed up in the current *Atlantic* by Mr. Sidney Webb, for we may accept his narrative of the economic evolution in England as closely resembling what is bound to happen—part of it has already happened—in the United States.

The great problem in war-making, as in war-prevention, is to so distribute the cost that none shall profit but each shall pay according to his means and thus share inexorably in what is no longer disputed as a great national waste. Arrayed against any such solution is a pretty large element—an element which has so long regarded business as a profit-making rather than a service-giving function—that it is idle to expect any instant reversal to a truly patriotic spirit. To that element, profits take precedence over all things—even national peril! Let us recognize these things and not seek to cover them up as the weaknesses they are—but let us also admit that we shall not be able to correct them, except in a partial degree, by governmental investigation and restriction.

* * *

THE building situation is clear: No work should be done which would hamper the work of war preparation and prosecution. On the other hand, it is, as the President plainly states, of the utmost importance that all industry be kept moving in close parallel to the true demand for legitimate needs. The country needs buildings of all kinds.

How shall it proceed in order to meet that need in the fullest measure with no impairment of the production of war material. The solution of that question depends, first, upon the final calculations of the Government's present and future needs for war as a basis upon which to compute the price, kind and quantity of building materials, labor and transportation available for building, and, second, upon that form of patriotism such as will inspire all those in control of the manufacture and distribution of building materials with a desire to make a healthful building program possible. Given that desire, the question can be handled without any governmental investigation. It would be far better if, instead of tempting and incurring a price-regulative fiat, which has not worked out in other countries, manufacturers and distributors could meet and agree upon a patriotic basis.

* * *

ALL forms of production in this country are represented by well-organized associations. Why cannot these highly systematized forces be put at the service of the Nation instead of remaining either inactive or selfishly occupied with their own particular affairs? While it is no doubt true that some organizations of the kind described have studied the question from the unselfish point of view, the amount of activity of that kind seems lamentably small in the fact of the President's urgent re-

quest for co-operation. Here is an opportunity to make such a demonstration of patriotism as the President has asked for.

Our suggestion is this: That every such organization meet and consider in what manner the industries it represents can be put wholly at the service of the Nation—and by wholly we mean just what the President means. We now know that the war will be won, not by the heroism of men, but by the perfection of organization. Who can contribute more to such an end than those who have spent years in organizing the industries of our country into the strong group associations which now so widely obtain. It would seem pathetic if we cannot profit from England's example! Why wait for the Government? Why not meet it more than half way?

* * *

THE proposition here involved is rather hazy as to essentials, but if we gather its drift it proposes that the organizations come together and agree on a reasonable and fixed scale of prices covering the war period. If this is not the proposition—what is it? The finest kind of patriotism that can be displayed in the face of such a crisis as that through which the country is now passing is the type of patriotism that is willing to forego the opportunity presented for profiteering in order that activity in all lines may remain as nearly normal as war conditions will permit. If this is the kind of co-operation that the *Journal of the A. I. of A.* has in mind we think it would be an excellent thing for American building to get that particular kind of co-operation under way.

* * *

THERE has been no question regarding the patriotic unselfishness of the building industries in the matter of meeting governmental demands upon them. Let me quote from a very timely and graphic article dealing with this phase of things from the pen of Mr. William Phillips Comstock in the current number of *Architecture and Building*. Under the heading "Housing the Soldiers" Mr. Comstock writes:

"Building cantonments for the New National Army will consume in three months' time more money than was spent in any one year on the Panama Canal during its construction. The sixteen National Army cantonment sites have been selected. They are located at Rockford, Ill.; Yaphank, L. I., N. Y.; Annapolis Junction, Md.; Petersburg, Va.; Ayr, Mass.; Wrightstown, N. J.; Columbia, S. C.; Atlanta, Ga.; Chillicothe, Ohio; Louisville, Ky.; Battle Creek, Mich.; Des Moines, Ia.; Fort Riley, Kan.; Fort Sam Houston, Texas; American Lake, Wash., and Little Rock, Ark.

"This is not all. The Navy Depart-

ment is busy on camp construction. The War Department is engaged in the same way. These last mentioned camps are located at Army Posts and in thirty days, from the middle of May to the middle of June, nine cantonments to house the 150,000 men added to the regular army were built. It is said that one of the buildings, 25x220 feet, was erected complete in ninety minutes.

"There is now scarcely six weeks to finish the great cities which the National Army cantonments will be. Each cantonment will house more than 30,000 men and will contain about 1,200 buildings of large size. It is figured that each camp will require about 26,000,000 board feet of lumber, which will be about 1,300 carloads. Other material that will go into the construction and equipment of each camp will amount to about 2,500 carloads more.

* * *

THE actual construction work on the cantonments will be in charge of the Quartermaster Corps and the officer in charge of each cantonment will be known as the constructing quartermaster. Under him will be an assistant quartermaster. The constructing quartermaster will be in full charge during the laying out of the building and will supervise for the Government the entire work of construction as carried on by the contractor.

"The engineers appointed for this work include a number of well-known civil engineers who have been given major's commissions in the Quartermaster's Reserve Corps. In addition several officers of the regular army Quartermaster's Corps are acting in executive capacity.

"The contracts for the sixteen National Army cantonments have been let to sixteen prominent American contracting firms. Contrary to the usual Government system of calling for bids, these contracts have been let under a fee system. The fees vary from 10 per cent. if the cost of the work is under \$100,000 to a fee of 6 per cent. if the cost of the work is over \$3,300,000, but the total fee to the contractor is in no event to exceed the sum of \$250,000."

* * *

THE Emergency Construction Committee of the General Munition Board are taking steps to safeguard the Government from paying unnecessary prices for materials and efforts are being made to mobilize the resources of materials of the various kinds required, co-ordinating the supply and demand and fixing prices which will give the material interests a fair, low margin of profit. As an instance, the Government has chosen the recently organized Southern Pine Emergency Bureau to furnish nearly 100,000,000 board feet of lumber, the larger part of which will be

used for cantonments and the balance for ship building.

"The loyalty and patriotism which prevails throughout the building industries in this contingency, bringing so great a drain upon the material resources and upon the personal time and efforts of the individuals concerned, many of whom have given freely of their services without thought of compensation, is an occasion for national satisfaction."

* * *

THAT bill for the licensing of architects, introduced in the Pennsylvania Legislature, died in committee. A letter from Mr. Albert Kelsey, President of the Pennsylvania State Association, to Mr. C. Emlen Urban, President of the Southern Pennsylvania Chapter, sheds a ray or two of light upon the reasons for its demise. I am indebted to the *Journal of the A. I. of A.* for the letter, which follows:

July 13, 1917.

C. EMLEN URBAN,

President of the Southern Pennsylvania Chapter, A. I. A., Lancaster, Pa.

Dear Sir: I have just learned from State Senator Jenkins, a member of the Judiciary General Committee, why our bill to license architects was never reported out of Committee. He naively told me that it was thought to be a hindrance in the way of poor boys, adding apologetically, that the music teachers and barbers of Pennsylvania had each advanced similar bills, and further that the music teachers' bill was never reported out of Committee any more than ours, but that the barbers' was, only to be voted down by the House.

Very truly yours,

(Signed) ALBERT KELSEY, President.

Just how the legislative wise men were able to figure that raising the standards for admission to the practice of architecture may be regarded as any more of "a hindrance in the way of poor boys" than the drastic requirements adopted for admission to the practice of law and medicine it would, perhaps, be bootless to inquire. The explanation volunteered by Senator Jenkins may be "naive." It is far from convincing.

* * *

HOW the labor situation in the building trades is affected by the draft is thus optimistically discussed by the *New York Real Estate Record*:

"Recent inquiries throughout the building and allied trades indicate the consensus of opinion to be that the elimination of the men called to military service will create but a slight impression upon the industry. Contractors and builders long have realized that a call to service would make serious inroads upon

their already depleted supplies of labor. In order to counteract this effect they have already availed themselves of the many new types of labor-saving appliances designed to speed up construction, cut building costs, and release men of military age for duty without crippling their industry. One of the depressing factors that has for many months been a source of trouble to builders, hampering their progress, and increasing the cost

of structural operations, has been the scarcity of both skilled and unskilled labor. This has made it necessary for employers to make use of every possible kind of labor-saving device and thus almost unconsciously prepare for the draft conditions. As there has been a marked recession in building construction recently, due to many contributive causes, a further tightening of the labor requirements will have but little surface effect."

defends his country's honor, and the artist who sends forth to them both his call of "Service Together."

* * *

The present attitude of the building industry seems to be, more than anything else, one of marking time pending the final decision upon the prices of structural steel to the private consumer, the stabilization of the brick market, the adjustment of labor difficulties and in general a settlement of the numerous adverse conditions that have made starting of structural operations a hazardous matter for both owners and building contractors. There is undoubtedly an undercurrent of activity, as evidenced by the number of contemplated building projects in the hands of the architects and engineers. The plans and specifications for the bulk of these projects are nearing completion and with an early return of conditions that somewhat approach the normal a healthy building movement will be sure to follow. While the activity in prospect is not expected to reach proportions that would indicate a boom, still there is a demand for a large number of structures of various types, the construction of which would keep the structural trades exceedingly active for a long period.

* * *

Henry S. Graves, chief of the U. S. Forest Service, has received a commission as major in the Reserve Engineering Corps, having been granted leave of absence from his position as head of the Forest Service. Major Graves has not been assigned to a command, but is acting under instructions, and is at present in France to make a study of conditions that will have to be met, of equipment that will be called for, and to find out how extensively the services of the American lumbermen can be utilized. A regiment organized on military lines is being recruited by the Forest Service to take up industrial problems and timber supplies for all lumber required for military purposes by the armies.

* * *

By virtue of the quiet atmosphere throughout the building industry there has not been much evidence of life in the markets for structural materials and supplies. Recent reports from prominent manufacturers and dealers in basic building materials indicate the fact that sales have been comparatively light even for this period of the year, and that buyers are evidently holding off in the hope that important recessions in commodity prices will follow the expected Governmental action in regard to the price fixing and control in various lines. This is apparently borne out by the fact that there are numerous inquiries current in the material markets for supplies for contemplated building operations which are being held in abeyance pending a downward movement in prices. The major portion of these structures will proceed as soon as there is some assurance that costs will recede and furthermore that the delivery of essential commodities will be made within a reasonable time.

EDITORIAL NOTES

F. L. Watson, who held the position of treasurer of the American Steel and Wire Company from 1897 to 1915, has removed his headquarters from Chicago to New York, where he has become assistant to the president of the Federal Export Corporation and treasurer of the Commercial Iron and Steel Corporation.

* * *

National Building Granite Quarries Association held its quarterly convention recently at the City Club, Boston, Mass. This association includes many of the firms in the granite industry east of the Mississippi River. The convention was largely attended, about seventy-five being present. At the business meeting in Boston a "Form of Proposal," "Form of Contract" and a "Code of Practice" were discussed and referred to the Board of Directors for adoption. Two weeks' time was voted to allow for suggestions or objections from any interested parties in regard to these questions. After the business meeting, the guests and members left for an automobile trip and visited granite quarries and cutting plants at Rockport, Mass., West Chelmsford, Mass., Concord, N. H., and Milford, N. H. It was voted that the next convention be held in three months at Mt. Airy, N. C. The offices of the association are at 31 State street, Boston.

* * *

Carl H. Watson, of Great Neck, N. Y., has been engaged as engineer in charge of the installation of water and sewer mains and the construction of roads on the United States Government aviation field at Mineola. The general contract for this work has been awarded to the Clough, Bourne Corporation.

* * *

The National Paint, Oil and Varnish Association will hold its convention at the Congress Hotel, Chicago, Ill., October 7-11. George V. Horgan, 100 William street, Manhattan, is secretary.

* * *

Although there has recently been less comment in reference to the extensive building operations undertaken by the Federal Government in the erection of army cantonments, training stations, and the numerous other types of military construction, made necessary by the present crisis, this work is progressing in a most satisfactory manner. In

a large way it is making up for the cessation of building activity in other lines.

* * *

Wentworth Institute, Boston, has placed its entire plant at the disposal of the War Department so that technical training in military engineering may be facilitated for enlisted men. The faculty of the institute is working in co-operation with the offices of the First Regiment of Engineers, Fifth Division, United States National Guard. A course of construction is being given that will continue throughout the summer and probably into the fall months. The concrete laboratory at Wentworth Institute was fitted up in co-operation with the Portland Cement Association, and is being used to teach engineers the essentials of concrete work as particularly applicable to military operations, such as the building of gun foundations, bomb-proof construction, etc.

* * *

The Government work is consuming immense quantities of structural materials and the operations already under way have practically depleted the labor market. In some respects it is to be considered fortunate that the general building activity is as light as it is at present, for the necessities of the Government must take precedence over private work, particularly in these anxious times. Up to the present time the military construction has received every consideration from building contractors of the best standing who have in many instances submerged their personal ambitions and opportunities for larger profits in a patriotic endeavor to be of service to the United States in this time of need.

* * *

The National Arts Club, through its American Artists' War Emergency Fund Committee, has developed a plan, and is actively engaged in creating a fund for the relief of American art workers who may be overtaken by distress caused by the war. This fund will be raised principally through the sale of a "Service Together" seal stamp designed by Mr. Eugene F. Savage (Prix de Rome 1912). Its motto, "Service Together," was suggested by President Wilson in his famous proclamation, and symbolizes the co-operation which exists between the farmer who supplies the food on which the nation fights, the soldier who

INTERNATIONAL BUILDING CONFERENCE TO BE HELD AT PARIS.

An invitation to attend an international conference representing the building interests of the allied countries to be held in Paris on October 4, has been received by the Cleveland, Ohio, Builders' Exchange. The object is to consider conditions as they may exist following the declaration of peace, especially the problems directly connected with the restoration of buildings in the devastated sections of Europe.

In the call emphasis is placed upon the conclusions that the United States alone will be in position to supply the necessary materials for rebuilding towns, factories and railroads laid waste by the ravages of war. The inspiration for the meeting comes from Belgium and the call is signed by a prominent committee representing the building interests of that country. It is probable that an effort will be made by the Cleveland Exchange to interest the national association of builders' exchanges in sending delegates to the conference.

SHOP KINKS.

Stop Screwdriver Slipping.

It is said that the slipping of a screwdriver, something which is especially noticeable with an automatic screwdriver, can be avoided by filing small teeth in the edge of the blade. These teeth should be made about 24 to the inch.

* * *

For the Stair Builder.

One method used for getting the proper ratio between tread and riser in planning out a stairway is to make the product of the two equal 66. For example, suppose we have a rise of 7 inches, then 66 inches divided by 7 equals 9 3-7 inches, practically 9 3/8 inches, as the width of the tread.

* * *

Filling Up Cracks in Concrete.

Use old newspapers soaked and softened in linseed oil. Clean out all dirt from cracks or joints, then paint inside of cracks or joints with good red-lead and oil. When hard and dry, fill cracks or joints with the soaked paper, smooth off, and when dry and hard, clean off with pumice stone or other grinding material, and, if well done you will have a nice smooth job of work.

AS WANAMAKER SEES IT.

John Wanamaker, Philadelphia's noted retail merchant, said in a recent bulletin:

"Patriotic economy means the elimination of waste and extravagance. It means the conservation of our food products, our natural wealth, our health, our energies, our labor, or very lives. It means putting more efficiency in everything we do so that each unite of money, energy and intelligence may accomplish the utmost.

"Patriotic economy does not mean the low-

ering of America's standard of living, which would make us less efficient physically and mentally, nationally and individually, and would kill the spirit and the will to do the truly self-sacrificing things to be done.

"Cities and communities must go on with their civic improvements. Road building and public works must proceed, railroad must renew their equipment. Factories must be kept going to their full capacity. Labor must be employed. Homes must be kept up. Merchandise must be produced, distributed, and used."

DANGEROUS OPTIMISM.

The young and inexperienced contractor is very likely to think that if he can figure a profit of 15 per cent. above the cost of all labor and material he is very safe and prosperous. Perhaps he will make money on some contracts with this margin, but the time will surely come when accident, delayed payment, strikes, a rise in prices, and various contingencies will wipe out all the margin and far more, and lucky he is if it does not entirely ruin him. This is particularly the case with a capable foreman accustomed only to earning wages, but who knows the cost of labor and material. A small profit looks relatively large to him and he is prone to invest his savings in a contract taken far below the proper price. If he can carry through at all he may feel that he has made money because by working twice as hard as usual he has secured fair or even extra wages, although in reality he has been up against a losing proposition. Such men perennially replacing those that have failed pour out year after year their capital on the altar of low contract prices and serve to perpetually keep prices below their proper level and maintain an unhelathly competition.—Contracting.

"UNCLE SAM'S" TERMS PLEASE PATRIOTIC BUILDERS.

As is perhaps the case with building contractors all over the country, members of the Pittsburgh Builders' Exchange are still discussing the Fee Schedule adopted by the Federal Government, for building construction which may be done for the Government in connection with the war preparations. Some builders believe the fees are not sufficient, but the enthusiastically patriotic builder and contractor—and he is vastly in the majority, says he is perfectly willing to work for Uncle Sam on the profit basis the old gentleman has decided upon. The schedule of fees follows:

If the cost of the work is under \$100,000 a fee of 10 per cent. of such cost; on work costing over \$100,000 and under \$125,000, a fee of \$10,000; over \$125,000 and under \$255,000, a fee of 8 per cent; over \$250,000 and under \$266,600, a fee of \$20,000; over \$266,600 and under \$500,000, a fee of 7 1/2 per cent.; over \$500,000 and under \$536,000, a fee of \$37,500; over \$536,000 and under \$3,000,000, a fee of 7 per cent.; over \$3,000,000 and under \$3,500,000, a fee of \$210,000;

over \$3,500,000, a fee of 6 per cent. The total fee to the contractor shall in no event exceed the sum of \$250,000, anything in the agreement to the contrary notwithstanding. The decrease in overhead expense, as the size of the contract increases, is given as the reason for fixing a final upset limit of \$250,000 on all fees.—Realty.

SALT FOR WOOD PRESERVATION.

Many methods are commonly used for the preservation of wood and preventing attacks of rot. The majority of these, such as chloride of zinc and the sulphate of copper treatment, are comparatively expensive, and are applicable therefore only to the better grades and classes of lumber and timber. They are generally used by the large industrial works and are not suitable for private use. According to the "Timber Trades Journal" there is a more economical method being experimented with in Scandinavia. This method employs common salt, as it has been discovered that impregnating the wood with this substance preserves it against decay. The effects of the action of common salt on wood were first noticed at the Great Salt Lake, in Utah. It was observed that the sleepers of a railway line which was continually washed by the very salt waters of the lake needed no renewal, and after forty-three years were in a far better state of preservation than oak sleepers impregnated with expensive chloride of zinc after fourteen years, when these latter require renewal. In consequence of this discovery comprehensive experiments have been made of the effect of salt impregnation of wood, and entire success is reported.

BLASTING WITH LIME.

One of the greatest forces produced by chemical action is that which is generated by the swelling of quicklime, or unslacked lime, when it is brought into contact with water. The lime, when wet, swells with a force that is almost irresistible. Many engineers have worked on methods to make use of this force, but it has never been practically applied until recently. Not long ago it was necessary to demolish a number of stone pillars twenty feet high and twelve feet square, in a factory. Dynamite was impracticable on account of the proximity of valuable machinery. Holes were therefore drilled in the pillars and filled with quicklime, upon which water was poured. The mouths of the holes were closed by tamping. In twenty minutes, as the lime swelled, these great pillars split and broke in all directions.

FIREPROOFING PAPER.

A patent was recently awarded in England on a method of fireproofing paper. According to this process the material is rendered non-inflammable by means of sodium aluminum carbonate. In circumstances where the proofing agent cannot conveniently be precipitated in situ, may be treated by mixing or coating with a preparation of the double carbonate.

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Stores and Apartments (alt. and add.), Broad and Allegheny avenue. Architect, Mahlon H. Dickinson, Bellevue Court Building, Philadelphia. Owners, Crumbie Bros., on premises. Brick, terra cotta and stucco, 3 stories, 65x160 feet, tile and tin roofs, cement, hardwood and composition floors, steam heating, electric lighting, tile and marble work, metal lath (painting, glazing, gas and electric fixtures, refrigerator, kitchen cabinets, gas ranges and hot water heaters reserved by owners. Architect has received revised bids.

Residence (alt. and add.), Sixty-fourth avenue and Sixth street, Oak Lane, Philadelphia. Architect, Clarence L. Caspary, 2133 North Eighteenth street, Philadelphia. Owner, M. M. Marks, 6406 North Sixth street, Oak Lane, Philadelphia. Stone, frame and stucco, 2 stories, rear addition, 18x22 feet; garage on first floor, slate roof, cement and pine floors, hot water heat, electric lighting. Plans in progress. Ready for bids in a month.

Power House, Girard Point, Philadelphia, \$12,000. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Concrete, 1 story, 30x50 feet, slag roof, concrete floors, rolled steel sash. Owners taking bids, due August 14th. Thos. C. Trafford, 1613 Sansom street; Robert E. Lamb Co., 1314 Arch street; Metzger & Fisher, Otis Building; Roydhouse-Arey Co., 112 North Broad street; Fred A. Havens & Co., 845 North Nineteenth street; Brann & Stuart Co., Commercial Trust Building; Armstrong & Latta Co., Land Title Building; John N. Gill & Co., Otis Building; Irwin & Leighton, 126 North Twelfth street; Milton S. Grawl, Bulletin Building, Philadelphia, and J. S. Rogers Co., Moorestown, N. J., are figuring.

Miscellaneous and Shop Building, Girard Point, Philadelphia. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Brick, steel and stucco, 1 story, 50x90 feet, slag roof, steam heat, electric lighting, marble work, rolled steel sash, concrete and pine floors, metal lath, roof ventilators, dampproofing. Owners taking bids, due August 14th. Thos. C. Trafford, 1613 Sansom street; Robert E. Lamb Co., 1314 Arch street; Metzger & Fisher, Otis Building; Roydhouse-Arey & Co., 112 North Broad street; Fred A. Havens & Co., 845 North Nineteenth street; Brann & Stuart Co., Commercial Trust Building; Armstrong & Latta, Land Title Building; John N. Gill & Co., Otis Building; Irwin & Leighton, 126 North Twelfth street; Milton S. Grawl, Bulletin Building, Philadelphia, and J. S. Rogers Co., Moorestown, N. J., are figuring.

Rectory (alt. and add.), Orianna and Brown streets. Architect, Peter F. Getz, 1634 North Sixth street, Philadelphia. Owners, St. Agnes' R. C. Slovak Church, Rev. J. J. Novorolsky, 732 North Fourth street, Philadelphia.

Brick and stone, 3 stories, 20x35 feet; two-story addition, 18x35 feet, slag roof, pine floors, waterproofing, ornamental iron work (heating, plumbing and lighting reserved). Architect taking bids, due August 9th. Melody & Keating, 1322 Race street; Anthony Ziernicki, 1632 Hunting Park avenue; D. W. O'Dea, 5227 North Fifth street; John McShain, 1610 North street, Philadelphia; Fred H. Kaiser, Pottstown, Pa., are figuring.

Residence (alt. and add.), 322 South Sixteenth street, Philadelphia. Architect, Wm. Woodburn Potter, Real Estate Trust Building, Philadelphia. Owner, Dr. Charles B. Worden, on premises. Brick, third and fourth story rear addition, slag roof, plumbing, electric lighting, pine floors, carpenter and millwork. Architect has received bids.

Loft Building, Front and Poplar streets, Philadelphia. Architect, Fred N. Greisler, Lafayette Building, Philadelphia. Owner, Simon Weil, 837 North Third street, Philadelphia. Brick, 5 stories, 65x155 feet (slow burning), slag roof, steam heating, electric lighting, elevator, fire doors, fire towers, sprinkler system, waterproofing. Architect taking bids on heating, electric work, sprinklers, painting and glazing.

Freight House No. 4 (add.), Noble and Newmarket streets, Philadelphia. Architect, Samuel T. Wagner, Reading Terminal Philadelphia. Brick and steel, 1 story, 83x130 feet, slag roof, pine floors, rolled steel sash. Owners taking bids, due August 10th. H. E. Baton, 1713 Sansom street; F. W. Van Loon, Denekla Building; Metzger & Fisher, Otis Building; A. L. Carhart, Hale Building, and F. A. Havens Co., 845 North Nineteenth street, are figuring.

Garage, Philadelphia Depot, Peltz street and Schuylkill avenue. Architect, C. E. Bolter, Philadelphia Depot, Philadelphia. Owners, U. S. Government, Schuylkill Arsenal, Peltz street and Schuylkill avenue. Brick, 1 story, 102x52 feet and 17x28 feet, asphalt roof, cement and pine floors (heating, lighting and gasoline storage system reserved), hollow metal skylights, roof ventilators. Low bidders, Wills Ludwick & Co., 34 South Seventeenth street, Philadelphia, \$10,983.

Garage (alt. and add.), 341-49 North Fifty-seventh street, \$10,000. Architect, private plans. Owners, Duffy & King, 302 North Frazier street, Philadelphia. Brick, 1 story, 75x150 feet, slag roof, cement floors, steam heating, electric lighting. Owners will build.

Office, Garage and Stable, Allegheny and Glenwood avenues. Architect, Fred T. Uezell, 147 North Third street, Philadelphia. Owners, F. J. Wittmaier & Son, 917 Tioga street, Philadelphia. When Buying a Home

insist that the house is piped through-out for gas so you can take advantage of the ease and economy of cooking, heating water and ironing with gas.

And a Baseboard Gas Outlet in each room is just the thing for connecting floor or table lamps and also provides a ready means for using gas heating stoves in the early Fall and late Spring when it isn't practical to have the house heating system going all day and night.

THE USE OF METAL LATH.

One can scarcely call the present demand for fireproof houses a craze, for it is the same idea which has possessed men for many generations. The knowledge and fear of fire has made everyone respect the structures which resist it to the limit, and to hope that the time would come when the same type of buildings would be the rule for residences. Whether the time is near at hand or whether it is some years off, the fact remains that the introduction of metal lath in its various styles has brought the fireproof measurably nearer.

Metal is used in a great variety of styles for lathing purposes. One may be the wire cloth, made in various sized mesh and several sizes of wire. Another form would be metal sheets perforated with holes to allow the mortar to squeeze through and form a key. In still another the sheet may be expanded

by cutting slits in it and deforming the sheet so as to leave suitable openings.

Then, again, the metal may be so formed that the sheet is quite rigid in one or both directions. This, as a rule, makes furring unnecessary when the metal is applied to a smooth or sheathed surface. Suitable devices also are provided that the metal may be attached to any surface as occasion requires.

The fact that unprotected metal is subject to corrosion makes it necessary to coat the lath under some circumstances. As a result we have plain, painted, japanned, galvanized and coppered lath, the base being any metal capable of being rolled into sheets or drawn into wire.

It was not very long before the fact was discovered and proven that the embedded metal acted as a reinforcement, and this opened up the way for the use of metal lath of a

heavier nature for use with concrete for solid partitions, walls, floors, columns and other constructions. In fact, so many uses have been found that metal lath may truly be called the backbone of concrete, stucco and plaster construction. Any attempt to enumerate the possibilities of the material would only result in omitting most of them.

The extravagant claims made for this material led to grief on the part of many manufacturers who could not always substantiate their claims. That day has gone by, however, and one would as soon expect the lumber interests to try to exploit their product under false colors as to find the metal products companies making any deliberate attempt to mislead contractors and builders on the merits of metal lath. Practically every manufacturer has elaborately prepared tables showing the properties of metal lath under various conditions, and as these tables are used every day in the calculation of floor loads, etc., they must be pretty near right.

Metal lath in a way permits a certain amount of deception as to appearance. Being entirely covered in a finished work, one must know that it is right before it is used. The appearance of a solid masonry wall coated with stucco is identical with a thin layer of the same material on metal lath. When properly used, therefore, it must be equally substantial in one place as in the other. Metal lath, with cement stucco, is suitable for the most ornamental buildings, even as its low cost makes it ideal for the temporary structure.

It goes without saying that the contractor, as well as the architect and engineer, must be thoroughly posted on the proper use of metal lath with the various forms of concrete, stucco, plaster, etc. Unless the contractor knows about these materials, how is he to talk with the owner who admires a recently erected building, and wishes one finished in the same manner. Unless he is prepared to construct another building in the same materials, how much show does he stand? Owners are rather particular about giving out contracts to those who hesitate, and the only way to get the owner's confidence is to be able to tell all about the material right off the reel.

When we talk of substitutes, it is sometimes difficult to tell which is the original material. Metal lath, to a certain extent, replaces the heavier and bulkier masonry walls, and in time there may be materials which will give metal lath a close rub for preference. Until that time comes, however, the progressive contractor will continue to use it for both interior and exterior work, keeping in mind its properties as listed by the manufacturers. The more he uses the better working knowledge he has of the material, and the better advice he can give his customers.

It used to be the idea that the plaster

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

was the only one who should know about plastering, and that he should be consulted when anything was up for discussion. That time is long past, for now the contractor is the one looked up to by the owner. Unless the contractor satisfies the owner, on the subject of metal lath and every other subject, his competitor will get the contract.

WHAT ABOUT BUILDING?

Much has been written—sometimes in worried tones, other times with too apparent optimism—as to what effect the war will have upon building construction. Before explaining why, we want to go on record in stating that the amount of building done in this country for the present year will only be limited by the ability to secure labor and materials for such work. Calamity howlers and disturbers will have no influence, because building absolutely must be done.

Our country is underbuilt in practically every direction we turn. In our cities there are not enough residences, as is proven by the uniformly high scale of rentals. Our manufacturers have not been able to keep up with the demand for products for both domestic and military uses, and will require increased facilities. This means more buildings. The conditions among railroads are so apparent to everyone as to require very little comment. Our transportation facilities are woefully inadequate, and must be expanded widely to take care of our country's needs. This will mean not only new equipment but new buildings of all kinds.

In municipal and state work, there is hardly a locality which has kept pace with the demand for improvements.

In commercial life, hundreds of new buildings will be required. Warehouses in great number will be needed to store goods of all kinds, as merchants and supply men cannot depend on hand-to-mouth buying, but must store their goods when they can get them. This applies not only to food supplies, which must be conserved as never before, but also to all general lines of merchandise.

The demand of our National Government for buildings of every type and description will be so great as in itself to almost tax the capacity of the building industry. In every part of the country these buildings will be erected in connection with training camps, arsenals, naval stations, aviation camps, supply depots and storehouses without number. These demands will of course have precedence over all others, and will call for the most efficient energies of our builders.

So we say with utmost confidence to the building world—cease talking and worrying about what are the prospects for building. Instead, turn your energies to the marshalling together of your building forces and equipment. Be prepared to be as busy as you care

to be, and, above all, arrange your organization to handle the maximum of work with the utmost efficiency, as one of your most difficult problems will be to secure adequate and competent labor.—Modern Building.

HOW ARCHITECTS MAY SERVE COUNTRY.

The American Institute of Architects has sent out, through its Central Committee on Preparedness, a circular to members of the profession telling of the needs of the United States Army, and in what manner architects and draftsmen may serve their country.

The circular in part is as follows:

"The United States Army is in greatest need of line officers, and it would be of the greatest service if the younger men of the profession, particularly those who have had military training, would enter this branch.

"The branches of the service in which an architect's training and knowledge would render him particularly valuable are the Corps of Engineers and Quartermaster Corps. In both of these there is no age limit.

"The Quartermaster Corps is primarily the business organization of the army. It has charge of the equipment, supplies, commissary, pay, transportation and building.

"The duties of the Corps of Engineers comprise reconnoitering and surveying for military purposes, including the laying out of camps; selection of sites and formation of plans and estimates for military defenses; construction and repair of fortifications and their accessories; the installation of electric power plants and electric power cable connected with sea coast batteries; construction and repair of military roads, railroads and bridges; military demolitions. In time of war within the theater of operations it has charge of the location, design and construction of wharves, piers, landings, storehouses, hospitals, and other structures of general interest, and of the construction, maintenance and repair of roads, ferries, bridges, and incidental structures, and of the construction, maintenance and operation of railroads under military control, including the construction and operation of armored trains.

"The buildings erected under the Q. M. C. comprise barracks, warehouses, hospitals, etc., of which many would be needed in time of trouble, and therefore the architect's services are particularly valuable.

"The special qualifications for members of an engineer company comprise:

"Engineers specializing in bridges, construction earth, electrical, highway, mining, railroad, sanitary, topographical, construction superintendents, topographical surveyors and sketchers, draftsmen, photographers and blueprint men, lithographers and zincographers, concrete, wharves, piers, buildings, quarrymen, miners, carpenters, bridge carpenters, blacksmiths, plumbers and pipefitters, elec-

tricians, enginemen, steam engineers, gas firemen, machinists, masons, caulkers, riggers, axemen.

"From the above it is evident that the architect can fit in somewhere in the Corps of Engineers, particularly in construction, topography, draughting, sanitary and electrical work. The architect would be in charge of much the same class of trades as he is in his professional superintendence, although military engineering technique is quite a different matter. In France many architects are engaged in translating photographs from aeroplanes into maps."

Mr. Evarts Tracy, the Octagon, Washington, is chairman of the Central Committee.

Removing Rust.

A useful method of removing rust from iron plates has been devised in the laboratory of the Consolidated Gold Fields of South Africa. A mixture of two parts of finely crushed sodium bisulphate with one part of common salt is prepared and applied to the plate in a wet condition. The mixture may be left on the plate for some time, but quicker results are obtained if it be scraped off after two or three hours and the surface scrubbed thoroughly with clean water, a wire brush being most suitable for the purpose. The treatment is repeated until the plate is clean. The process appears to be successful even on badly corroded and even pitted plates. When the plate is finished it should be washed with strong alkaline solution and dried quickly. A coating of paraffin oil is recommended to be applied promptly to prevent the starting of oxidation, after which paint can be applied.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

For every "one" man you can mention who has succeeded without advertising we'll agree to name ten whose greater success has been due to advertising "direct." Moral Advertise!

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., July 24, 1917.—Sealed proposals will be opened in this office at 3 P. M. September 4, 1917, for the construction complete of the United States post office at McKees Rocks, Pa. Drawings and specifications may be obtained from the custodian of site at McKees Rocks, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

As The Editor Sees It

THE immense falling off in building activity, due to labor and materials being high and deliveries more or less uncertain, promises to bring about a slight weakening in the price position of certain lines of structural mediums. Common brick is the first of these commodities to show the effect of a constantly lessening demand. The sudden stoppage of operative building has caused the price of brick to descend. Men who observe closely the trend of the material markets expect concessions in the not distant future in other lines. Of course, no one looks for any recession in such commodities as steel and lumber. The demand for steel in governmental quarters, among munition makers and in various other avenues of military activity precludes any letting down of the prices or easing of deliveries in this material. The unprecedented demand for lumber for the new army cantonments, for the wooden ship program and for slow-burning industrial construction renders it certain that there need be looked for no immediate reduction in lumber costs.

Such reductions as are to ensue will come from among those lines the demand for which has become materially reduced by the abnormal decrease which has set in in general and operative building.

* * *

AN article on the break in the price of brick, from the *Real Estate Record*, enumerates some of

the major considerations responsible for this condition. Says the *Record*:

"The local building situation furnishes an interesting paradox that has been brought about by the descending price of common brick, while substantially all other structural commodities are either holding firmly at their established high levels, or exhibiting a decided tendency toward further advances. There is no evidence of important price concessions or weakening in other lines; in fact, these materials, especially the metal groups, are daily becoming stronger. The present brick situation certainly does not reflect the general building material market conditions, but does indicate the great extent that the local building activity has suffered through high construction costs.

"Prominent among the reasons presented for the recession in brick prices is the dearth of speculative building construction. The erection of one and two-family dwellings, tenements and high-class apartment houses is now almost a negligible quantity, and it was from these sources that the brick manufacturers and dealers anticipated a considerable amount of new business. Recent construction has consisted largely of manufacturing and commercial projects, costly residences and institutional work and reinforced concrete, stone, terra cotta blocks and timber were the materials most generally used.

SPECULATIVE builders undoubtedly have been hampered in their operations by virtue of the high cost of structural materials, scarcity of skilled and unskilled labor, and other factors that have influenced structural operations. Inasmuch as the major portion of speculative work consists of non-steel frame buildings, and, furthermore, because brick is such an important element in work of this character, it would seem as though the present time was most propitious for renewal of activities along these lines.

"Common brick is now available at a price that has not been approached for many months. There is every reason to anticipate, therefore, that the low cost of brick will stimulate activity to a remarkable degree. For the builder who will mature his plans for starting work immediately, a possibility of increased profits looms large. The opportunity is one, however, that should be availed of quickly, as there is but little prospect that the present levels will remain any great length of time, while there is a decided probability that prices will advance.

"The present situation is a temporary matter, brought about in order to allow the manufacturers to reduce the surplus stock of brick that has gradually piled up by virtue of the reduced building activity, and the assumption is that as soon as the market is cleared, the price of brick will return to approximately the \$11 level.

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 407

**BLUE
PRINTS**

"The brick production this year will undoubtedly be much less than that of former years. Brick manufacturers have had numerous difficulties to contend with through which the production capacity of the plants has been greatly reduced. This will in itself have a tendency to return the commodity to high price levels, and if the demand for the brick improves through the anticipated renewal of general building activity, prices must remain at high levels for many months."

* * *

IT will be noticed that the *Record* regards the reduction in the price of common brick as merely temporary and that it does not look for any recession in the quotations on other lines of material. But by way of offsetting this view the market reporter of the same publication remarks:

"Following the trend of the building industry there has been no life in the markets for structural materials and supplies during the week. The demand for building commodities fell off abruptly on account of the excessive heat that made work on new structures dangerous and which from a humanitarian viewpoint necessitated the temporary closing of many office and manufacturing plants.

"In the last few weeks there has been a strong tendency developing toward a weakening in the price position of various structural commodities. For a long period building materials have been firmly intrenched at extremely high levels and it seemed almost hopeless to expect a recession. At the present writing there is a definite prospect that the prices of some materials will soon exhibit a downward trend and in certain lines there has already been substantial decreases. Common brick is a notable example. The hope is universal among the building and allied trades that with lowered material costs, structural operations will be resumed and the industry in general stimulated thereby."

* * *

COMMENTING on the outlook for the operator who has the nerve not to be affected by the general depression in that field of building the same writer adds:

"There is a steadily increasing demand for rentable buildings of almost every type. New structures, if erected, would return an income that even with the present high construction costs would make their erection a profitable venture for the builder. If investors and speculative builders could only be brought to a point of realizing the necessity for these buildings and the profits to be obtained therefrom, undoubtedly a marked improvement in the building situation would immediately result. According to the number of projects on the boards in the offices of architects and structural

engineers it seems as though some owners are beginning to realize the advantages that are before them but the number is not yet great enough to create a material effect on building conditions.

"Renting accommodations are bound to be at a premium next autumn. The demand will include apartments, lofts, factories and other types of structures, and it behooves the prospective builder who intends to profit by this unprecedented demand, to make immediate provisions for commencing contemplated operations so as to be ready for the prosperous times that are sure to come."

* * *

SOME excellent suggestions, not out of key with the general spirit of the foregoing, are made by the *National Builder*. Speaking of the demand which undoubtedly exists for rentable buildings, that publication remarks:

"It's a good season to replace buildings which have outlived their usefulness. Building standards are constantly rising. A survey was recently begun by the Building Inspector of Milwaukee to find out how many structures in that city have become passe from the standpoint of safety and sanitation. A recent law of the Legislature has given him additional power to condemn dilapidated structures peremptorily. This is a good move and one in which other cities might well take a hand."

* * *

PROPERTIES in the older sections which have gone begging for tenants in recent years, owing to the greater appeal of the more modern operative dwellings, put up by the hundreds in the newer, outlying sections, now find ready occupancy thanks to the demand created by the shutting off of this competition. Rentals in the case of modern dwelling properties have increased in many cases as much as ten per cent. over normal figures. One of the curious outcomes of this advance in rentals is a considerable activity in suburban realty.

Hundreds of tenants affected by rent advances have turned to the suburbs for home accommodations on reasonable terms, many of them as buyers. Says the *National Builder*:

"Raising of rentals seems to be a favorite pastime this year among landlords. This high cost of living in a rented home has given many people the idea that it would be a good thing to build and own a home of their own. Roughly speaking, it is estimated by real estate operators that every increase of 10 per cent. in rentals will decrease the number of renters by about the same percentage. These figures apply especially when speaking of suburban

property in comparison with city apartments. In many cases the flat dweller is glad to leave behind him this additional urge to force him into the suburban districts where his inclinations have pointed the way long ago. And have you noticed that patriotism is strongest among the people who own their homes?"

* * *

THE following, on the steel situation, has a healthy substructure of common sense:

"Backed by a declaration that war demands for steel will increase and that the utmost we can produce will be below the requirements of ourselves and our allies, an urgent plea is made that steel be used for general business purposes only when the requirement is unavoidable. Lumber and concrete are strongly advocated instead and there comes the intimation that unless a steel substitute is found some manufacturers may be obliged to curtail or even suspend operations during our participation in the European conflict.

"This message goes to business men in the second of a series of war bulletins sent out by a committee of the Chamber of Commerce of the United States co-operating with the Council of National Defense.

"Steel is needed in war for ships, railroad cars and locomotives, rails, trucks, and containers, the bulletin goes on. It must be had for shells and other munitions work—requirements large in tonnage far beyond what is generally supposed. In addition, business producing government materials and supplies, the necessities of life and the materials for producing the necessities of life, require steel in great quantities for buildings, machinery, tools and containers.

"Materials which can be used in substitution for steel are plentiful in comparison. Lumber may be expected to meet all needs and cement may be had in quantity for concrete work."

* * *

THE situation is one that presents a real opportunity to the architect with ingenious ideas. Good, substantial buildings were erected long before steel construction came into vogue. It ought to be possible to do a great deal of the structural work demanded by present-day needs without drawing heavily on the already overtaxed steel industry. The problem involved is largely one of skillful and ingenious planning.

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

EDITORIAL NOTES

Marc Eidlitz & Sons, 30 East Forty-second street, New York, have obtained the general contract for the group of dormitory buildings to be erected for Yale University at New Haven, Conn., on the entire block bounded by Elm, High, Library and York streets. The project includes the erection of seventeen one and three-story buildings and a clock tower 100 feet in height. They will be arranged in the quadrangular form typical of American university construction. The estimated cost has been placed at \$3,000,000. Plans are now being prepared by James Gamble Rogers, 470 Fourth avenue, Manhattan, who also designed the Yale Club at Vanderbilt avenue and Forty-fourth street, New York City.

The Association of Iron and Steel Electrical Engineers will hold its eleventh annual convention at the Bellevue-Stratford Hotel, Philadelphia, Pa., September 10-14, inclusive. Wednesday, September 12, will be devoted entirely to a patriotic program, with addresses to be made by army and navy engineers on matters of vital importance to the industries with which the association is identified.

The Longacre Construction Company, 11 East Forty-second street, New York City, has obtained the general contract for the reinforced concrete garage to be built at 310 to 328 West Thirty-eighth street, through to 327 to 329 West Thirty-seventh street, that city, leased several weeks ago from Colonel W. D. Mann by the United States Government, to be used for the storage of automobile mail trucks, belonging to the Post Office Department. The lease is for ten years at an aggregate rental of about \$600,000. The proposed structure will be two stories in height in Thirty-eighth street, where there is a frontage of 250 feet and three stories in height in Thirty-seventh street, where the frontage is 50 feet. The new building, which is expected to be ready for occupancy by January 1, 1918, will contain 67,750 square feet, and will house 250 trucks. Its estimated cost has been placed at \$300,000.

The National Paint, Oil and Varnish Association will hold its convention at the Congress Hotel, Chicago, Ill., October 7-11. George V. Horgan, 100 William street, Manhattan, is secretary.

The Bishop-Babcock-Becker Company, of Cleveland, O., manufacturers of the Reliable air line and return line vacuum and vacuum heating systems, has purchased the heating and engineering department of the E. F. Houghton & Co., Philadelphia, Pa.

The American Steel Export Company, New York, has appointed Woodburn's, Ltd., Montreal, Canada, as its exclusive agents for the provinces of Ontario and Quebec.

The Vulcanite Portland Cement Company has opened an office at 161 Devonshire street, Boston, Mass. This is to give more efficient service to the steadily increasing New England trade.

The National Association of Brass Manufacturers held its summer meeting recently at the Hotel Hollenden, Cleveland. The association discussed several important matters, including freight equalization and the possibility of removing the technical specifications now applying on Government purchases of brass goods.

The Lidgerwood Manufacturing Co., 96 Liberty street, New York, has issued Bulletin No. 20, entitled "Lidgerwood Electric Hoists." It covers the standard line of electric hoists developed by the Lidgerwood Manufacturing Co., especially for general contracting work. It also shows a few of the many types of hoists they have designed and built for various hoisting duties.

E. J. Parker, manager of the Morgan Engineering Co., has joined the staff of the Vulcan Steel Products Co., 120 Broadway, New York, as sales manager of the machinery and tool department. The company contemplates opening a chain of offices in Europe, China and Japan, and Mr. Parker will leave shortly for abroad to personally conduct this work.

The Engineering Supply Company, 22 Hudson street, Jersey City, with John L. Covert as a agent, has filed a certificate of incorporation in the office of the County Clerk. The company will do a general building and engineering business. The capital stock authorized is \$50,000. The incorporators are Clarence Van Keuren, Andrew E. Nolan and John L. Covert.

The National Exposition of Safety and Sanitation will be held in the Grand Central Palace, New York, September 10-15, under the joint auspices of the American Museum of Safety and the National Safety Council.

Industrial branches of building activity are steadily gaining in volume and there are reports coming in daily from practically all parts of the United States indicating that many new projects for manufacturing and commercial purposes are being planned and placed under contract for immediate construction. High class residential construction is fairly active and there is an increasing number of moderate priced dwellings projected. Speculative building, while still far behind other types of construction in volume and cost, is nevertheless indicating signs of renewed activity and there will surely be a decided resumption along this line if material prices could be brought back to a reasonable level.

The Chicago Cement Machinery and Building Material Show will be held in the Coliseum, Chicago, February 6-13. The show will be held under the auspices of the National Exhibition Co., 123 Madison street, Chicago.

With the exception of common brick, structural material prices have remained practically stationary for the last week. The scattering fluctuations were not to an extent that would have any substantial effect upon building conditions. While material prices are exorbitant the excess cost of construction has not seemed to have influenced the type of construction that has been prevalent for the last few months. Almost without exception the structures placed under contract were absolute economic necessities and the matter of extra cost was not comparable to the urgency of the demand for working space.

The National Exposition of Safety and Sanitation will be held in the Grand Central Palace, New York, September 10-15, under the joint auspices of the American Museum of Safety and the National Safety Council.

The complications in the freight situation do not seem to be quite so acute at the present writing as they have been for some months past. The building industry, as a whole, is looking to the railroads of the country for better service than has been recently obtained. The railroads, generally, according to late reports to the Railroads' War Board, indicate a larger use from freight cars made possible by better movements and heavier loadings.

The National Municipal League will hold its twenty-third annual meeting in Detroit, Mich., November 21-24, with headquarters at Hotel Statler. For information address the secretary, Clinton Rogers Woodruff, 703 North American Building, Philadelphia, Pa.

That the building situation has generally a more promising aspect, however, is evidenced by the renewal of activity in the offices of the architects and engineers throughout the city. Recent reports from these sources indicate that both professions are engaged in the preparation of plans and specifications for new projects which, unless some unforeseen circumstances arise, should reach the active building stage in the near future. The contemplated work is general in character and includes practically all types of structures and methods of construction, with the possible exception of steel-frame buildings, which must be eliminated from present considerations on account of the difficulty of obtaining deliveries of fabricated steel and the exorbitant prices that are being charged for this commodity. With the work in prospect there is a feeling generating that the structural trades will enjoy a sufficient amount of activity along general lines to compensate for the loss entailed by the cessation of steel-frame building construction.

CHAMBER OF COMMERCE MEMBERS ASKED TO MAKE CANVASS OF UNNATURALIZED WORKMEN.

**Request Has for Its Object the Determination of Sentiments of Aliens
Towards Property Rights.**

The Chamber of Commerce is encouraging its members to make a canvass of their employees with a view to determining how many are unnaturalized residents. Many Philadelphia employers have already canvassed their workmen in this respect, but it is desired that all members of the Chamber take this step.

This registration of workmen has for its object also the discovery of whether or not any of the unnaturalized residents hold sentiments that might prompt a disregard of property rights and of the law during the continuance of the present war.

A letter on the subject has been sent to all members who employ a miscellaneous class of labor. It has been found that certain answers are necessary to complete the records of unnaturalized residents, and among the questions asked with this end in view are the following:

"How many unnaturalized workmen desire to become citizens?"

"What measures may be adopted to encourage such a desire?"

"How many speak English, so that they can be talked to directly in a crisis?"

Obligations on Employers.

Each employer at the present time is confronted with certain unusual obligations that heretofore have not obtained. If, among his workmen, there are a number of workmen of German or Austrian birth, he is concerned, naturally, with the character of the sentiments, not only toward the Government and the law, but also as to the probable respect in which they may be expected to observe his property rights.

The present situation is inducing also a more intimate study of welfare work within business establishments and the investigation of living conditions when under control of the employer.

For the purposes of this general consideration, unnaturalized employees may be broadly divided into two classes—those whose loyalty is unquestioned, and those whose expressed sentiments would indicate the existence of doubt on this score. The President of the United States has already counseled the greatest forbearance in all dealings with unnaturalized residents. From other authoritative sources has come the common-sense injunction to all aliens to "obey the law and keep your mouth shut."

Conditions May Change.

Up to the present time there have developed no reasons for a belief that serious trouble will arise in the handling of aliens in this

country—although there is no telling when changed conditions may necessitate an even more careful cataloging of such aliens with a view to the adoption of more exacting provisions in this regard. Each employer of labor must appreciate that those of his unnaturalized workmen who are of unquestioned loyalty have no immediate effective means of formally expressing that loyalty except to and through him, who stands sponsor for them. Securing naturalization papers consumes considerable time, and meanwhile there may arise conditions under which the loyal unnaturalized workman may find it difficult to point to convincing evidence of his loyalty.

As to those unnaturalized workmen who, by reason of their unwillingness to pledge themselves to a strict observance of the law, or otherwise, are to be mistrusted, it should be to the interest of their employers no less than to the Government to record at least a few pertinent facts regarding them.

Members Urged to Act.

Accordingly, the members of the Philadelphia Chamber of Commerce are being urged to give immediate consideration to such a canvass and registration. The advantages thereof should readily appeal to every employer.

Although the Chamber of Commerce does not find it practicable at this time to render direct assistance in the making of such a canvass and registration or to provide a clearing-house or centralized record of the information secured, it is convinced that its members will be impressed with the distinct immediate advantages that will result to employers generally. Moreover, if the experiences of other countries are to be followed, it is quite possible that the Government will find it expedient later to prescribe such a canvass of workmen, for obvious purposes.

There is being circulated an outline of a form on which the individual records of such a registration might be made—a form on which the signing employee is asked to pledge an observance of the law, and to record his name, his nationality and the station at which he registered as an immigrant. This latter item of information is of value in that the correctness of the signer's statement of nationality may be, with proper authority, checked against Government records should such a course be justified in certain cases.

Once Again—Who Invented the Modern Skyscraper?

Thomas Nolan, professor of architectural construction of the University of Pennsylvania, recently delivered a public lecture in which he said:

"There has been some controversy in regard to priority of invention of first use of metal skeleton construction. It is generally agreed that it was first developed in Chicago in 1889 and recognized as a definite and new contribution to the science of construction in American architecture."

Professor Nolan said that the steel skeleton frame has been classified as the last of the four great developments of structural advances, which have given architecture really new resources, the first being the Roman vaults, the second the Gothic ribbed vault and flying arch and buttress and the third the metallic truss. Steel beams were first manufactured in 1895 by the Carnegie Steel Company at Pittsburgh, Pa.

Who invented the steel skeleton frame and made possible the modern skyscraper?

Prof. Nolan said:

"The inception and growth of the high building has been made possible by the introduction and rapid development of structural steel, light fireproof materials, passenger and freight elevators, and by great advances in the mechanical equipment, isolated foundation supports and wind bracing.

"Previous to 1885 'tall' buildings were not more than eight or ten stories high—this height was very nearly the practical limit—and their construction was then sometimes referred to as 'elevator architecture.' The next stage in the evolution of the tall building was the one in which the entire weight of the floors and roofs and the loads on them were carried by a system of metal columns, the exterior walls thus supporting no load but their own weight. Buildings were carried by this form of construction to the height of eighteen or nineteen stories.

"With the introduction of cheap structural steel the steel 'skeleton' or 'cage' construction came rapidly into use. Formerly the 'skeleton' type was carefully distinguished from the 'cage' type of tall building construction, the former term being applied to buildings which might have the outside walls self-supporting and which depended somewhat for stiffness upon walls, partitions, floor filling, etc.; and the term 'cage' being applied to buildings which consisted of a complete and well-connected framework of metal designed to carry not only the floors, but the walls, roof and all other parts of the structure, and furnished with wind-bracing members."

**Advertise and the world buys of you;

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Wagon Shop (remodeled for Dwelling), 459-61 North Third street. Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owners, Pennsylvania Wagon Co., 427 North Orianna street, Philadelphia. Brick, 2 stories, 32x45 feet, slag roof, cement and plank floors, electric lighting, 1 elevator. Plans completed. Architect and owners ready for bids.

Garage and Service Station, 2120-22 Fairmount avenue, Philadelphia. Architects, Folsom & Stanton, 1328 Walnut street, Philadelphia. Owner, Wm. Myers, Bell Telephone Co., Thirteenth and Arch streets. Brick, 1 story, 40x165 feet, slag roof, steam heating, electric lighting, cement floors, hollow metal skylights (gasoline storage system reserved). Architects taking bids, due August 16th at noon. Wills-Ludwick Co., 34 South Seventeenth street; Frederick G. Storck, 3519 North Thirteenth street; Warren E. Biscoe, 3954 Ludlow street; McCloskey & Bahls, 1620 Thompson street; D. Henwood, 1509 Wood street; Thos. C. Trafford, 1613 Sansom street; H. E. Grau Co., 1707 Sansom street, and Ketcham & McQuade, 1029 Brown street; Milton S. Gaul, 902 Bulletin Building, and Smith-Hardican Co., 1606 Cherry street, are figuring.

Store (add.), 326 South street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, George Orlovitz, care of Louis Orlovitz, 326 South street. Brick and stone, 1 story, 20x57 feet, slag roof, electric lighting, hollow metal skylights and doors, metal lath, cabinet work, modern plumbing. Plans completed. Owner will be ready for bids in a few days.

Garage, 319 Kater street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, George Orlovitz, care of Louis Orlovitz, 326 South street. Brick, 1 story, 13x49 feet, slag roof, cement floors, steam heating, electric lighting, hollow metal skylights, fire doors, gasoline storage. Plans about completed. Owner will take bids in a few days.

Residences (9), E and Arthur streets, Philadelphia. Architect, private plans. Owner, W. E. Strock, 7353 Second Street Pike, Philadelphia. Brick, 2 stories, 16x37 feet, slag roof, hardwood floors, hot air heating, electric lighting. Owner sub-letting.

Residence (alt. and add.), 3113 Midvale avenue. Architect, Samuel D. Hawley, 2nd, Queen Lane Manor, Philadelphia. Owner, Walter D. Kimball, Perry Building, Philadelphia. Brick, 2½ stories, porch additions, slag and tin roof, pine floors, electric lighting. Plans about completed. Architect ready for bids in a week.

Apartment House, Central Philadelphia. Architects, Bright & Myers, Otis Building, Philadelphia. Owner's name withheld. Reinforced concrete, brick and terra cotta. 13 stories, 50x125 feet, slag roof, steam heating, electric lighting, tile and marble work, fire doors and hollow metal doors, cement, pine and oak

floors, hollow tile, metal lath, elevators, waterproofing, ornamental iron work. Architects have received sub-bids.

Sewage Disposal Plant (add.), Byberry, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Department of Public Health and Charities, Dr. Wilmer Krusen, Director, Room 584, City Hall, Philadelphia. Reinforced concrete and stone, Emscher & Dosing tanks, sludge beds and sprinkler filters, wire cloth. Owners taking bids, due August 24th at noon. F. W. Mark Const. Co., Finance Building, and W. W. Anstine Co., 1218 Filbert street, are figuring.

Power Plant, Thirty-fourth and Pine streets, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, Philadelphia General Hospital, care of Dr. Wm. Krusen, 584 City Hall. Brick and stone, 1 story, 158x53 feet, 50x52 feet and 88x80 feet, slag roof (steam heating, plumbing and electric work reserved), marble and terrazzo work, rolled steel sash and skylights, hollow metal sash, cement floors, metal lath, fire and kalamein doors, iron stairs, ornamental iron work, dampproofing. Owners taking bids, due September 12th. W. W. Anstine & Co., 1218 Filbert street; Mitchell Bros., 2125 Race street, and F. W. Mark Const. Co., Finance Building, Philadelphia, are figuring.

Garage (alt. and add.), 431-33 Lombard street. Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owner, M. Levin, on premises. Brick and steel, 2 stories, 32x70 feet and 60x60 feet, slag roof, steam heating, electric lighting, cement and plank floors, 1 elevator (gasoline storage system reserved by owner). Owner taking bids, due in one week. Samuel Schultz, 3030 North Sixth street; Abraham Kirpichnikoff, 1110 North Forty-first street, and M. Miron, 560 North Sixth street, are figuring.

Colonade Hotel (int. alt.), southwest corner of Fifteenth and Chestnut streets. Architect, Stanley K. Neubauer, 1118 Chestnut st., Philadelphia. Owner, Bonwit, Teller & Co., southwest corner of Thirteenth and Chestnut streets. Brick and stone, alterations to first and second floors, oak and pine floors, tile and marble work, ornamental iron work. Architect taking bids, due August 15th. Frank G. Stewart, 1619 Sansom street; H. E. Baton, 1713 Sansom street, and Smith-Hardican Co., 1606 Cherry street, are figuring.

Apartments (alt.) and Store, Twenty-third and Tioga streets, Philadelphia. Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owner, Harry Chervin, 2100 Hunting Park avenue, Philadelphia. Brick, 3 stories, 16x70 feet, and 1 story, 16x30 feet, slag roof, hot water heating, electric lighting, tile work, hardwood, cement and pine floors, metal lath, iron stairs. New plans in progress.

Office Building, Sixteenth and Arch streets, Philadelphia. Architect, Wm. Steele & Sons

Co., 34 South Fifteenth street, Philadelphia. Owners, Wm. Steele & Sons Co., 34 South Fifteenth street, Philadelphia. Brick, 3 stories, 84x44 feet, slag roof (heating and lighting reserved), maple and parquet floors, tile, marble and terrazzo work, rolled steel sash, hollow metal skylights, fire doors, metal lath, roof ventilators, metal weatherstrips, metal ceilings, wire work. Owners taking sub-bids, due as soon as possible.

Factory, Greenwich Point, Philadelphia. Architect, private plans. Owners, the Brown Co., Inc., 2063 East Fifth street, Philadelphia. Reinforced concrete and brick, 3 stories, 120x61 feet, Barrett roof, concrete floors, rolled steel sash and skylights, fire escapes, ornamental iron work (heating, lighting and elevators reserved). Owners taking bids, due August 17th. Melody & Keating, 1322 Race street, are figuring.

Storage Building and alt. to Buildings (3), 114-120 North Front street. Architects, King & Wightman, 1513 Walnut street, Philadelphia. Owners, George D. Wetherill & Co., on premises. Brick, steel and concrete, 4 stories, 79x43 feet, slag roof, cement, maple and pine floors (steam heating, electric work, plumbing, elevator, sprinklers and mechanical plant reserved by owners), rolled steel sash, hollow metal sash and skylights, fire doors, metal lath, Belgian block paving, metal ceilings. Revised plans in progress. Architects will be ready for bids in one week.

Garage (add.), Mt. Airy and Germantown avenues, Philadelphia. Architects, King & Wightman, 1513 Walnut street, Philadelphia. Owner, E. P. Rotzell, 7200 Germantown avenue, Philadelphia. Brick, 1 story, 50x106 feet, slag roof, cement floors, hot water heating, electric lighting, hollow metal skylights. Plans in progress. Architects will be ready for sub-bids in one week.

Factory, Venango street and Pennsylvania Railroad, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, A. Schoenhut Co., Adams and Sepviva streets, Philadelphia. Reinforced concrete. Plans in progress. Too early for details.

Dispensary and Administration Buildings, Seventh street, between De Lancey and Cypress streets. Architects, Duhring, Okie & Ziegler, 1218 Chestnut street, Philadelphia. Owners, Babies' Hospital of Philadelphia, care of Mr. Davidson, 1713 Walnut street, Philadelphia. Brick, stone and steel, 4 stories and 2 stories and basement. Plans in progress.

Garage (alt.), Wissahickon avenue and Cliveden street, Philadelphia. Architects, Evans & Warner, Witherspoon Building, Philadelphia. Consulting decorator, Oscar E. Mertz, Commercial Trust Building. Owner, Adolph Loeb, on premises. Brick and hollow tile, 2 stories, 22x200 feet, slate roof, pine and concrete floors, steam heating. Mr. Mertz has received bids.

Both Phones

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

BUILDERS

Before your present company has a chance to say "No," ask me about placing your surety bonds. I'll give you the best of service, relieve you of all details, insure your getting lowest rates and protect you in every way. Get REAL SERVICE.

We know lots of men who have made money without the aid of advertising, but— they haven't made it since 1876.

The way to get money is to sell things to people who want things. People who want building material and building devices read "The Guide."

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

When Buying a Home

insist that the house is piped throughout for gas so you can take advantage of the ease and economy of cooking, heating water and ironing with gas.

And a Baseboard Gas Outlet in each room is just the thing for connecting floor or table lamps and also provides a ready means for using gas heating stoves in the early Fall and late Spring when it isn't practical to have the house heating system going all day and night.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

The prosperous, the great, the wise,
You may have noticed, advertise!

Buy pure lime, 99% pure, no core, no grit. **DAVID FRANCE CO.**,

Jersey City, N. J.

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

Residence (add.), 2833 St. Paul street, Baltimore, Md. Architect, private plans. Owner, Annie B. Connolly, on premises. Brick, 3 stories, tin or slag roof. Contract awarded to John C. Mach, 716 North Wolfe street, Baltimore, Md.

Bank (alt.), Prince Frederick, Calvert County, Md., \$3,500. Architect, private plans. Owners, Prince Frederick Bank, J. B. Gray, president, Prince Frederick, Md. Consists of general interior alterations. Contract awarded to J. L. Robinson Const. Co., 218 East Lexington street, Baltimore, Md.

THE WAR DEPARTMENT'S CANTONMENT PLANS.

There will be sixteen cantonments constructed in various parts of the country.

These camps will each consist of one division, plus certain additional units, and will aggregate from 35,000 to 45,000 men in each case. A division consists of nine infantry regiments, divided into three brigades, one brigade of light artillery, consisting of three regiments, one regiment of cavalry which will be organized like an infantry regiment, one regiment of engineers, one aero squadron and one field signal battalion. The additional units will vary at the different camps and will consist of heavy artillery regiments, additional infantry regiments, balloon companies and field telegraph battalions. Infantry regiments are composed of 12 companies at 200 men each, one machine gun company of 200 men, and smaller organizations, known as headquarters and supply companies and medical detachments, attached to the regiments. Artillery regiments are made up of six batteries, each with headquarters and supply companies, and engineer regiments are made of six companies with headquarters and supply companies. The battery consists of 190 men. The engineer company consists of 164 men.

The barracks for companies and batteries will be two stories in height, with the mess hall and kitchen located on the first floor, and with dormitories on the balance of the first floor and the second floor. Small detachments will be housed in one-story barracks, as will the officers. The officers for a regi-

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

ment are housed in groups, depending on the size of the organization, which means that from 8 to 15 officers will be in each building.

It is the intention of the Government to erect, as soon as funds become available, a post exchange building for the use of each regiment, which will contain a small restaurant and a small store for the sale of small wares, soda water, ice cream, etc.

The Y. M. C. A. is providing for the use of each regiment an assembly building, where men will be provided with writing materials, magazines and books, and where religious meetings, entertainments, and lectures will be given. The Y. M. C. A. is also planning to provide in connection with each division cantonment a large auditorium or assembly hall where more extensive entertainments, religious services, etc., can be held.

The construction of stables for the requisite horses and mules will be started as soon as the construction of the necessary buildings for housing the men have been completed. Stables are, in general, placed in the rear of the living quarters, and, so far as possible, in the direction away from the prevailing summer winds, so that such flies as may develop will be blown away from and not into the quarters of the men.

The Quartermaster's Department in providing quarters for troops on the Mexican border had worked up a system of houses consisting entirely of one-story buildings. In completing plans for the present cantonments the fact developed that this arrangement would require too much ground space, and, coupled with the fact that the various units had been largely increased in size, made it necessary to adopt the two-story barracks in the interest of economy.

Lavatories will be provided for each organization, fitted with shower baths and other necessary fixtures. The shower baths will be provided with hot and cold water, and, in general, the toilet facilities will be practically as good as would be provided in connection with permanent barracks at army posts.

The hospital plant in each case will be placed to the best advantage under the conditions of each group, and the location is not determined by the typical layouts.

The buildings are all constructed substantially with frames of wooden studding and covered with boards. The windows are of good size and ample in number.

It is difficult to grasp the great scale of these cantonments. They will occupy from 900 to 1,200 acres each, and when the units are arranged in one straight line, as they will be in some localities, they occupy a strip of ground about one-third of a mile wide and nearly 2½ miles long! Owing to the different topography of the various sites, the units will be arranged in different ways, varying from the straight-line plan and the U-shaped plan to the S-shaped and figure 8-shaped plans, it being essential that the principal street and

parallel service street, on both of which the units are "threaded," have as easy a grade as possible. The sites for all have now been made public.

Messrs. George B. Ford, Charles Butler, J. Otis Post, Woodruff Leeming and other members of the American Institute of Architects acted as advisors in the planning of the cantonments and the individual buildings of which they are composed.—"Journal of A. T. of A."

GETTING A SITE TOGETHER.

The erection of the new Astor Building on the site of the former Astor House calls to mind the old stories about the troubles John Jacob Astor, the first, had in assembling this plot, says the "Wood-Harmon Magazine." Mr. Astor lived at 8 Vesey street when he conceived the idea of building a fine hotel on Broadway, opposite the Common (now City Hall Park) and the junction of the Boston Road (now Park Row). He first secured the house of Rufus King at the corner of Vesey street and Broadway, which had large gardens attached. Mr. King was at that time Minister to England, and his granddaughter, Madam Mary King Waddington, the wife of a prominent French statesman, had distinguished herself for her literary abilities.

Gradually Mr. Astor acquired every house along Broadway until finally he had all but the Barclay street corner. This belonged to John G. Coster, an old friend of Mr. Astor's, who frankly but firmly refused to sell. Finally, Mr. Astor went to him and said: "Mr. Coster, I have here two appraisals of your house by two of the best real estate men in the city. I need your house for the site for my hotel. You don't want to move, but I will make it worth your while. For the higher price of these two appraisals you can buy as good a house as you want anywhere in New York, and I will just double that price, to pay you for the trouble of moving." So Mr. Coster accepted double the highest appraisal of his house, let his friend Astor have it, and the Astor House rose, to become for two gen-

erations, at least, the leading hotel in New York.

AWARD TO LOWEST BIDDER.

The wide discrepancy in bids for the construction of buildings has always been a matter of wonder or indignation to the uninitiated—of wonder, if he attributes to mankind motives of common honesty; of indignation, if he regards most men as rascals. Whatever his viewpoint, the discrepancy exists and remains a mystery.

It is a fruit ful theme, one that is pressing upon the constructive intelligence of all factors actively identified with construction work. And distinctive progress is being made towards a solution. Among others, the Master Builders' Association of Boston has been vigorously discussing this question in its monthly letters of recent date. In its latest number Secretary William H. Sayward says:

"Owners and observers have been puzzled in estimates submitted by contractors and have remarked that there must be something wrong when figures submitted are so wide apart. The 'something wrong' is in the lowest-bidder principle. The contractor who bids extraordinarily low, in nine cases out of ten, does so because he is very anxious to get the work to enable him to carry his force of men along to meet the demands of some other undertaking, or he may have the less legitimate purpose of using payments that will be coming to him on the new work, to make up, bridge over, losses or retention of payments on other work he is just completing."

The continuance of unrestricted competition is not given approval by Mr. Sayward. The remedy suggested is to limit the competition to bidders of selective type. Says Mr. Sayward: "For work of either small or great proportions, the safe and sane method of procedure is to open bidding only to concerns that are qualified in every way to perform the work to be undertaken."

One way to escape the income tax is to quit advertising and do less business.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Garage, Twenty-second and Arch streets, \$25,000. E. Cunningham (O and C), 2214 Chestnut street. Brick, 1 story, 147x100 feet, slag roof.

As The Editor Sees It

WHEN Philadelphia comes to the task of framing restrictions, under a zone law similar in some degree to that in process of enforcement in New York, one of the most important features of such restrictions will be a set of regulations governing the subject of occupancy. Most readers, certainly most lay readers, rest under the impression that zoning laws have to do solely with the question of limiting the height to which buildings may be erected. As a matter of fact, the subject of height restriction forms but a small and unimportant item in the broad general scope of zoning regulations. To the current number of the *New York Real Estate Record* Mr. Francis P. Schiavone, a well-known architect of Manhattan, contributes a very interesting paper dealing with the occupational restraint imposed under the zoning law. That New Yorkers are, perhaps, as little acquainted with the ramifications of the new law as are Philadelphians would seem to be indicated by the tone of Mr. Schiavone's opening paragraph.

"Although the restrictions as to the use or occupancy of buildings and premises, commonly called the Zone Law, have been in effect in all parts of New York City for a year, there is still sufficient doubt among the public as to what the law permits and what it prohibits to warrant a short exposition," says Mr. Schiavone. "The following paragraphs

are offered unofficially, but they should convey a fairly accurate idea of the operation of the Zone Law.

The city has been divided into four classes of districts or zones. The "unrestricted" is all that its name implies; the Zone Law applies no restrictions whatever to the use or occupancy of buildings or premises located within it. The "undetermined" districts comprise that part of the city which was so undeveloped as to give little or no sign of its future. It is, pending its zoning, an unrestricted district. The remainder of the city is in either the "business" or "residence" district. By "business" or "residence" is meant, not necessarily the character of its development, but rather the zone into which it has been placed by the Board of Estimate and Apportionment, as shown on its zone maps.

* * *

THE Zone Law may be divided into two grand divisions: 1, that applying to new buildings erected after July 25, 1916, and 2, that applying to existing buildings and to changes in occupancy in existing and future buildings. For brevity, the word buildings will be employed to include all structures and premises, including lands which are unbuild upon.

Referring to new buildings the uses permitted in the residence zones are defined by the Zone Law as follows:

Section 3. Residence Districts. In a residence district no building shall be

erected other than a building, with its usual accessories, intended or designed exclusively for one or more of the following specified uses:

- (1) Dwellings, which shall include dwellings for one or more families and boarding houses, and also hotels which have thirty or more sleeping rooms.
- (2) Clubs, excepting clubs, the chief activity of which is a service customarily carried on as a business.
- (3) Churches.
- (4) Schools, libraries or public museums.
- (5) Philanthropic or eleemosynary uses or institutions, other than correction institutions.
- (6) Hospitals and sanitariums.
- (7) Railroad passenger stations.
- (8) Farming, truck gardening or green houses.

* * *

IN a residence district no building or premises shall be used for any use other than a use above specified for which buildings may be erected and for the accessory uses customarily incident thereto. The term accessory use shall not include a business nor shall it include any building or use not located on the same lot with the building or use to which it is accessory. A private garage for more than five motor vehicles shall not be deemed an accessory use.

These are general classifications and as might be expected do not specifically

**DRAWING
MATERIALS**

**BLUE
PRINTS**

include many border-line cases. A border-line case is generally either a combination of a permitted and a prohibited use or a use which may be either a prohibited or a permitted use depending on its individual characteristics. Thus, while schools are permitted in a residence district, a school for domestics would not be permitted if it included an employment agency among its activities. There would be no objection to the school in the residence district provided its employment agency were located in a business or unrestricted zone. So also in the case of a school for the blind having a department where books for the blind are embossed and bound, a distinction must be drawn between the use which may be a proper accessory of the school and a use which may be a business or industry and not properly an accessory. If the embossing and binding were done chiefly or wholly by the blind such activity might be construed to be a proper function of the school, but if others were employed in this bookmaking, it would be considered as a use incompatible with the restrictions of the residence district even though the books were made for the blind.

* * *

A RESIDENCE having on the same lot a large number of dog kennels for the owner's dogs might properly be considered an accessory use only if there is an entire absence of business, whether sale, service or exhibition, on the premises. Of course, if the dogs constituted a nuisance it could be abated under the Sanitary Code.

* * *

A GARAGE may be erected in a residence district only upon the same lot with a residence. It must be occupied exclusively by the cars owned and used by the occupants of the residence; space may not be let to those not living on same lot. It must be free from all business use. Thus a garage might not be erected for public hacks, taxicabs or other cars let or hired out even though the owner and operator owned and occupied the residence on the same lot. So also a distinction must be drawn between a garage which is an accessory to a residence and a residence accessory to a garage. Thus a building, being a garage on the ground floor and a residence above, might be classified according to the importance or size of its uses. If the area devoted to the garage were as great as or greater than that given over to the residence, it should most certainly be considered a garage with an accessory residence. Such a use would not be permitted in a residence district. In any case a garage for more than five cars is excluded.

UNLIKE the rules of the Fire Prevention Bureau the Zone Law includes motorcycles as well as automobiles under the term motor vehicles.

Stables are to be treated in the same manner as garages. A limit of five horses is placed upon private stables. The stable must be upon the same lot as the residence to which it is accessory and the horses must be used by the occupants only of the residence and not in any business or trade. A combined stable and garage will be limited as to the ownership and use of horses and cars as above. The aggregate number of horses and cars may not exceed five.

* * *

HOTELS having thirty or more sleeping rooms are permitted in a residence district. A hotel having less than thirty is not permitted. The question as to the admissibility of a cafe, restaurant, bowling alleys, barber shop, cloak room, etc., all of them businesses if conducted independently of the hotel, must be decided by the conditions in each case. It is reasonable to class these activities as necessary accessories of a hotel if they, their entrances and their practices, insure their being patronized exclusively by the guests of the hotel. If they are arranged to invite an outside trade they will fall into the ordinary business classification and thereby be excluded from the residence district.

Clubs are permitted in a residence district except such clubs as have as their chief activity a use commonly construed as a business. Thus a club, so called, having as its primary activity a cafe, dance hall, athletic show or other business would be excluded from a residence district.

A museum is another occupancy permitted in the residence zone, but a distinction must be drawn against those pseudo museums, the chief or sole purpose of which is to sell or advertise the objects exhibited. Thus the commercial picture gallery would not be permitted in a residential zone.

* * *

A THEATRE, show or circus is to be regarded as a business, but it would seem reasonable to permit occasional private theatricals in a residence or club in a residence district if not conducted for profit.

A skating rink, ice or roller, tennis courts or other such places will be construed as a business use of the premises if admission is charged or if they are in any way conducted for gain. Advertising signboards are also to be construed as a business occupancy.

Greenhouses are permitted in a residence district, but if a greenhouse were erected in a well-developed section, e. g., lower or central Manhattan, for the chief purpose of selling flowers not

grown on the premises or conducting the business of florist, it would be construed as a business and not permitted to locate in a residence zone.

* * *

A QUESTION which has often arisen is as to the status of a milliner or dressmaker. The Zone Law was not designed to prevent those household activities which may be carried on without changing the residential character of the street and will permit a dressmaker or milliner to enter a residence district so long as only occupants of the residence are engaged and no outside help is employed. There is, of course, the added requirement that the building be given none of the characteristics as a business structure. This same ruling applies to physicians' offices or artists' studios.

An interpretation of the Zone Law by the Board of Appeals holds that building exclusively for physicians' offices, laboratories and operating rooms and having an apartment only for the superintendent is to be deemed a sanitarium and as such admissible in a residence zone.

A nurses' home, so called, would not be permitted to locate in a residence district if, in addition to being the home of one or more nurses, it was an employment agency for others.

* * *

THE foregoing extracts from Mr. Schiavone's paper should go far to convince the intelligent reader how very intricate and confusing a task is that of devising a set of regulations, the terms of which may be stretched to cover the widely diversified and constantly varying conditions of metropolitan centers. Here in Philadelphia, while there has been much loose talk, from time to time, of a zoning system, nothing practical beyond the appointment of a commission to take up the question appears to have resulted.

* * *

BILLBOARD and advertising sign board structures deface many of our finest streets. Garages, stables, factory structures break in unhindered at any point the owner sees fit to select. Garish movie theatres take a stand cheek by jowl with costly private residences. Gasoline stations butt into the most attractive sections unhampered by official or other restrictions. Until within three months it was possible for a dealer in rags and waste to set up anywhere in Philadelphia the only defense left the abutting property owner being a plea to the court in injunction proceedings. A friend of mine called upon the Health authorities not long since to protest against a cheese factory which an alien sought to set up within a few doors of his home in the cellar of a building altogether unsuited for the purpose. He was informed that the Health authori-

ties were without jurisdiction unless the factory, following its establishment, became a public nuisance. Next door to another friend of mine a neighbor tore out the cellar space beneath his porch and built in a small garage. Four automobile owners store their cars in this tiny garage, subjecting the adjoining residents to annoyance and discomfort at all hours of the day and night. In one of the nicest residential sections of West Philadelphia within the past two weeks a pool and billiard room opened up, frequented by noisy, half-grown boys and filling the surrounding neighborhood with the sound of clicking pool balls and noisy laughter long after the usual retiring hours.

These are abuses every one of which

is regulated in New York City by the excellent zoning law in force in that city. Here, the affected resident is practically without redress. * * *

AMONG ordinances which should be taken up by Councils and passed and rigidly enforced is one regulating the location of what are known as waste or refuse dumps. Under existing laws it is possible for a contractor to lease or buy a low-lying or swampy piece of land and fill it in with ashes, rubbish and litter of every description unmolested. The depreciation wrought in surrounding property by the adjacency of a "dump" of this character is sharply exemplified in several of the outlying sections of Philadelphia.

establishing an information bureau or business reference library, through which the members may obtain the name and address of any maker of any particular product. This promises to be a useful service, and manufacturers are likely to profit by having their catalogues on file at these headquarters.

* * *

Grosvenor Atterbury, architect, has filed plans for the restoration of the cupola of the New York City Hall, after the design of John Macomb, who originally planned the structure in 1803. The tower will be similar in exterior appearance to the one which crowned the structure when it was first erected. After the fire on May 10 of this year, when the cupola was practically destroyed by fire, the suggestion was advanced that the tower be restored to its original form. The new cupola will be built of fireproof terra cotta block and reinforced concrete covered with copper, with a steel truss support. The estimated cost of the alteration has been placed at \$30,000.

* * *

The American Iron and Steel Institute will hold its autumn meeting at the Hotel Sinton, Cincinnati, October 26 and 27.

* * *

With the exception of a slightly decreased demand, there is but little change in the building material situation. Car and labor shortage continue to be the principal thorns in the sides of the manufacturers and dealers in structural materials and supplies, and while the freight conditions have recently indicated some signs of improvement, still much more is necessary before this great problem will be considered solved to the satisfaction of the shippers.

* * *

George A. Fernley, secretary-treasurer of the Metal Club of Philadelphia, has been granted a leave of absence, and has been commissioned as a first lieutenant in the Ordnance Department of the United States Army. Mr. Fernley is stationed at Washington, D. C., where his duties comprise the buying of hardware and kindred lines. During his leave of absence his duties in connection with the Metal Club have been assumed by his brother, Thomas A. Fernley.

* * *

The National Association of Brass Manufacturers will hold its next meeting at Milwaukee on September 27 and 28.

* * *

Comparatively a few years ago there was the cry that many of our large cities were overbuilt. Now the population increases in many localities have caught up with construction and there is a complaint that there are not nearly enough accommodations to satisfy the number of families seeking them. Factory and warehouse space and living quarters are particularly in demand and the foresighted investor and speculative builder who will immediately institute measures to remedy the situation by starting the erection of buildings of these types will be in a position to obtain large returns from his venture. Profits seem to be assured notwithstanding the excessive

EDITORIAL NOTES

The National Housing Association will hold its annual meeting at Chicago October 15-17, 1917. Headquarters, Hotel LaSalle. For information inquire of Lawrence Veiller, secretary, 105 East Twenty-second street, New York City.

* * *

The present outlook in the building and construction field is for a continuation of progress in structural activity and unless something unforeseen occurs there is no apparent reason why the builders of this country and the numerous lines of manufacturing endeavor that are dependent upon them, should not begin to enjoy better times.

* * *

The Bridgeport Brass Co., of Bridgeport, Conn., announces the removal of its New York office to the Woolworth Building, 232 Broadway.

* * *

Harry F. Briscoe, formerly of Fagan & Briscoe, Hoboken architects, and recently of O'Rourke & Briscoe, Newark, is now with John T. Simpson. Offices have been established in the Essex Building, Newark, under the firm name of Simpson & Briscoe.

* * *

Electrical contractors of New Jersey, at their semi-annual meeting at Price's Hotel at Pleasure Bay, disbanded and afterward reorganized under the name of The Electrical Contractors' and Dealers' Association of New Jersey. The new organization admits jobbers, manufacturers, architects and central station managers. Nearly 200 members enrolled in the new association. The former officers held over, with Charles R. Newman, of Passaic, president; Daniel H. Smith, of Trenton, vice-president; Paul H. Jaehning, of Newark, treasurer; J. Van Dyke, of Asbury Park, secretary, and the following board of directors: Carl F. Adams, Trenton; R. P. Ward, Dover; E. P. Strang, Camden; George E. Davis and Benjamin F. Sprague, of Newark.

The American Foundrymen's Association will hold its twelfth annual exhibit of foundry and machine shop equipment in the Mechanics Building, Boston, Mass., September 25-28, inclusive.

* * *

Although the erection of manufacturing and commercial structures continues to be the most prolific source of building activity at the present writing, there is a possibility that this type of construction will slow down as other phases of structural work become more active. A prominent industrial engineer is discussing the building situation this week stated that according to his line of reasoning and the surface facts, the end of the construction boom for industrial and commercial buildings is almost in sight and that a marked reduction in the volume of operations of this character is naturally bound to follow. The individuals and concerns that have erected new structures during the last year or two have anticipated their requirements for some time ahead. The existing high material prices have not affected this type of building endeavor to any extent, as the cost of the operations were paid out of the immense profits that were obtainable during the two past years of unprecedented prosperity. The situation contains a ray of hope, however, from the prospect that general building activity will become more prevalent over a wide territory.

* * *

The Grant Pulley and Hardware Company, D. Stanley Gross, Philadelphia manager, announces the removal of its local office to 339 Land Title Building.

* * *

Manufacturers and jobbers of sheet metal products, tools, equipment and supplies are requested to send their catalogues and trade literature to headquarters of the new Roofers' and Sheet Metal Men's Club, Herman Weinberger, secretary, 47 West Forty-second street, New York City. Mr. Weinberger is

cost of labor and building materials. The seekers of rentable space are quite willing to pay their share of the increased cost of construction if only they are able to obtain the accommodations they desire. Rents in all types of buildings are steadily climbing and real estate men and building managers state that in the main their clients first desire to be comfortably located and that additional rentals are expected and are virtually an after consideration.

The American Foundrymen's Association will hold its twelfth annual exhibit of foundry and machine shop equipment in the Mechanics Building, Boston, Mass., September 25-28, inclusive.

One of the many excuses advanced for the recession in speculative building operations is that material dealers and jobbers in some instances have refused to supply materials and supplies to the smaller builders unless fifty percent. of the purchase price was deposited with the order. Large building contractors were not affected by this ruling, but the smaller speculative builder, who erects but one or two structures at a time, yet annually accounts for an important part of the total volume of buildings, is prevented from starting his development unless adequate credit is advanced.

The Chicago Cement Machinery and Building Material Show will be held in the Coliseum, Chicago, February 6-13. The show will be held under the auspices of the National Exhibition Company, 123 Madison street, Chicago.

The Prudential Insurance Company of America has loaned to the Pennsylvania Terminal Real Estate Company, for five years at 5 per cent., \$3,000,000 on the building now in course of construction, to be known as the Hotel Pennsylvania, which will occupy the entire block front on the east side of Seventh avenue, between Thirty-second and Thirty-third streets, opposite the Pennsylvania station, New York City. The loan is one of the largest placed on record during recent years. The hotel, when completed, will be twenty-four stories in height, and will have a frontage of 200 feet on Seventh avenue, and 400 feet in each street.

The International Association of Municipal Electricians will hold its annual convention at Niagara Falls from September 11-14. Robert J. Gaskill, Fort Wayne, Ind., is president.

Reports from various sections of the country indicate that although there has been an appreciable slump in structural operations the outlook from the majority of the districts is indicative that the condition will speedily improve. The most potent reason thus far given for the slump recently experienced is high material prices combined with a hesitancy on the part of prospective builders to commit themselves until there was as-

surance that no severe financial disturbance would follow the advent of the United States into the World War. That there will be no economic upheaval is now conceded and, with a tendency toward lower material prices, a strong revival of structural activity is looked for by those in close touch with the building situation.

The National Paint, Oil and Varnish Association will hold its convention at the Congress Hotel, Chicago, Ill., October 7-11. George V. Horgan, 100 William street, Manhattan, is secretary.

The members of the several committees of the National Association of Sheet Metal Contractors have been appointed by President George Harms, with the chairman first named in each case as follows:

Warm Air Furnace—E. B. Langenberg, St. Louis, Mo.; Frank J. Hoersting, Dayton, Ohio; John Hussie, Omaha, Neb.; Whilmore R. Taylor, Philadelphia, Pa.; William E. Lamneck, Columbus, Ohio.

Lecture—Frank Hiller, Cleveland, Ohio; Otto Geussenhainer, Sheboygan, Wis.; Frank Eynatten, Peoria, Ill.; Otto E. Cluss, St. Louis, Mo.; J. D. Riley, Pittsburgh, Pa.; F. K. Chew, New York, N. Y.; W. J. Kaiser, Columbus, Ohio; Daniel Stern, Chicago, Ill.; E. L. Seabrook, Philadelphia, Pa.

Apprenticeship—Otto E. Cluss, St. Louis, Mo.; G. G. Jones, Racine, Wis.; Charles A. Puckett, Brooklyn, N. Y.; Peter Johnson, Peoria, Ill.; H. C. Knisely, Chicago, Ill.; Charles N. Louis, Peoria, Ill.; R. C. Jeske, Milwaukee, Wis.; J. C. Specht, Los Angeles, Cal.; Frank Treuchet, Springfield, Mass.

Trade Relations and Policy—Edwin L. Seabrook, Philadelphia, Pa.; John B. Wallig, Kenosha, Wis.; Norris H. Tripp, New Bedford, Mass.; Frank B. Higgins, St. Louis, Mo.; R. Jobst, Peoria, Ill.

Fire Prevention—Fred, deConigh, Chicago, Ill.; American Sheet Metal Works, New Orleans, La.; John Bogenberger, Milwaukee, Wis.; Paul L. Biersach, Milwaukee, Wis.; Willis Manufacturing Company, Galesburg, Ill.; C. F. Kornbrodt, Kansas City, Mo.; H. C. Knisely, Chicago, Ill.; E. E. Miller, Kansas City, Mo.

Overhead Expense—William McLroy, Pittsburgh, Pa.; George Van Landegend, Holland, Mich.; W. A. Fingles, Baltimore, Md.; Martin Walsh, San Antonio, Texas; D. M. Haines, Chicago, Ill.; W. D. Shafer, Peoria, Ill.

Trade Development—George Thesmacher, Cleveland, Ohio; E. B. Langenberg, St. Louis, Mo.; H. C. Knisely, Chicago, Ill.; J. C. Bayer, Portland, Ore.; Frank K. Chew, New York, N. Y.; A. G. Pedersen, Chicago, Ill.; Milwaukee Corrugating Company, Milwaukee, Wis.; N. & G. Taylor Company, Philadelphia, Pa.; American Rolling Mill Company, Middletown, Ohio; J. M. & L. A. Osborn Company, Cleveland, Ohio.

New York State has an average of nearly 1,000 accidents a day, excluding those which cause no loss of time other than the day or

shift in which accidents happen and which require no other medical attention than first aid. This fact was made public recently in the annual report of William C. Archer, Second Deputy Commissioner, of the Bureau of Compensation of the State Industrial Commission. The report states in part:

"There are in New York State 200,000 employers and 2,000,000 employees under the compensation laws. They receive an annual total wage of \$1,000,000,000," the report sets forth. Of the 315,000 cases requiring medical aid, the average cost is \$10, it is stated, and there are 60,000 claims annually for benefits, the average benefit being \$160.

"There are 1,200 deaths a year. The average death benefit is \$3,250. The total annual benefits are now running \$12,000,000, including medical."

The Borden Stove Company, manufacturers of the justly celebrated line of "Adelphia" Steam and Hot Water Boilers, Warm Air Furnaces, Ranges and Stoves, announces its removal from the old stove district on Second street, Philadelphia, to new and commodious offices and show rooms at 1311-1313 Arch street. A feature of the new offices is a special section which is to be reserved exclusively for the use of customers of the Borden Company visiting Philadelphia. Desk accommodations have been installed with every convenience such as telephone service, stationery, etc. The new Borden offices are in the heart of the shopping district and within easy reach of the big hotels and the leading railroad terminals.

**The chap who bags the glittering prize
Is the fellow who learns to advertise**

Don't expect outsiders to give you a big rating on a one-inch space.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

The "Builders' Guide" is the OLDEST, and the ONLY Architectural Publication in Pennsylvania.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.
—Exchange.

This is the age in which one man DOES ONE THING. You can run your BUSINESS. Find a man who can RUN YOUR ADVERTISING.

METHODS OF HANDLING BULK CEMENT

Elimination of Packages Results in Economy and Saving—Some Simple Methods Employed.

There is no argument needed to convince the contractor and engineer that the elimination of the package problem in connection with Portland cement would result in economy and saving. The question which is uppermost in the minds of superintendents on the job is how to handle and measure bulk cement from the time it arrives in railroad cars until it finds its way into the charging hopper of the mixer. There are several methods which have been successfully used, the choice of which depends upon the size of the job, railroad facilities and the general layout of the construction plant.

Bulk Cement Not Dusty to Handle.

To those who have not used cement in bulk it may seem reasonable to suppose that it will be exceedingly dusty to handle. Experience has proved the contrary. Bulk cement in transit becomes packed so that on its arrival at destination a man can walk on the surface without sinking in to any appreciable depth. This packing makes it possible to shovel the cement with practically no amount of dust being raised. There are no sacks to be shaken and that is perhaps the most dusty operation in the handling of cement for construction work.

On work where cement is being used in quantities of half a car a day or more, and where the mixing plant is located within reasonable distance of the receiving siding, the simplest method of handling bulk cement is to shovel it directly from the car into wheelbarrows of known capacity and then through the provision of proper runways, wheel the cement directly to the charging hopper of the mixer. Measurement, when this method of unloading and handling is used, can be effected in the same way that the measurement of coarse and fine aggregate is done. This method is applicable more properly to work of not very great size and where construction operations will cover only a comparatively short length of time.

Where Storage Is Provided.

Where railroad facilities and the size of the work warrant it, it is advisable to provide storage for cement. This may be made more advisable on account of car shortage or the liability of irregular shipment. The most commonly followed method where storage is provided is to unload the car of bulk cement by means of a power shovel. Shovels of the type used in handling grain can be used, but it has been found more practical and efficient to use a shovel of a scoop type, having sides and back so that the load first taken is retained. The flat shovel allows the cement to flow off either side and over the top, and for this reason is less desirable. The shovel should

be attached by cable to a motor or engine of from 7 to 10 horsepower. With this equipment 200 barrels can be unloaded from a car in three hours. The power shovel dumps the cement from the car into the boot of a bucket elevator, which in turn raises it, discharging into the storage bin. This method should be followed where the floor of the storage bin is approximately on the level of or above the railroad track. If the track level is well above that of the storage, cement can be spouted from the car by gravity to storage.

On some work where the mixing plant has been located at a greater or less distance from the receiving tracks and the main cement storage, bins have been erected over the mixers for stone, sand and cement. These bins are so constructed as to hold sufficient material to insure the continuous operation of the mixing plant. Where this condition holds a belt conveyor from the main cement storage can be laid to the bins feeding the charging hoppers of the mixer. This belt conveyor can be used by means of a screw conveyor running the length of the main cement storage.

Successful use has been made of automatic scales placed beneath the three material bins over the mixer for the accurate proportioning of mixes. The scales can be so set as to permit of any particular mix of concrete being delivered to the charging hopper.

The method above outlined, that is, the use of a power shovel and bucket elevator, is particularly applicable to the average plant manufacturing concrete products. It is evident that the construction of permanent storage facilities in such cases would be economical and efficient.

Industrial railways have been used to a considerable extent in unloading and handling bulk cement. Industrial track is laid parallel to the receiving siding and industrial cars are loaded direct from the sand, stone and bulk cement cars on the siding. In this case measuring boxes are affixed to each car of material, so arranged that one holding the proper amount of material for one batch of concrete can be dumped directly into the industrial car, which as it travels along receives all three materials in proper proportions for one batch of concrete. Industrial track leads to the mixing plant where the cars are dumped into the mixing hopper.

Bulk cement has been successfully used on work where the mixing plant was at a considerable distance from the receiving track. Tight bottomed dump wagons have been loaded directly from the car and driven to the work and the cement dumped into boxes from which it is drawn as needed. In such cases measurement is effected by the same means

as employed for the coarse and fine aggregates. The point might be raised that there would be no protection from damage by water if such a scheme were followed and accordingly attention is called to the fact that cement sacks do not keep cement from getting wet, but rather tend to absorb moisture, thereby actually increasing the liability of damage to cement by water.

As has been previously mentioned, before determining the method to be employed in handling bulk cement, local conditions and facilities should be thoroughly investigated and the nature of the work given due consideration so that that scheme which is most properly adapted to the job can be used.—“New York Real Estate Record.”

PLACE AND VALUE OF THE TRADE PAPER.

“Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country.”—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

The business man who grudges a commission to an advertising agent who thinks “he can do it himself” is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, “The Builders’ Guide” is the right medium for your advertising and cannot fail to bring you profitable returns.

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without advertisement.

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Loft Building, Fifth and Locust streets, Philadelphia. Architect, Fred N. Greisler, Lafayette Building, Philadelphia. Brick (slow burning), 3 stories, 20x100 feet, slag roof, steam heating, electric lighting, pine floors, fire doors, 1 elevator. Architect will sub-let.

Residence, Cliveden street, northeast of Wisahickon avenue, Germantown. Architect not announced. Owner, W. W. Riday, 1010 Race street, Philadelphia. Brick or stone, 2½ stories. Plans in progress.

Residence, Twelfth street, above Sixty-ninth avenue, Philadelphia. Architect, John H. Rothwell, Geneva avenue and Westford Road, Olney. Owner, Charles Dapp, 6916 York Road, Philadelphia. Brick and stucco, 3 stories, 28x35 feet, asphalt, shingle roof, concrete, oak and pine floors (heating, plumbing and lighting reserved), tile and marble work, hollow tile, metal lath. Revised plans in progress. Architect ready for bids in a few days.

Residence (alt. and add.), 322 South Sixteenth street, Philadelphia. Architect, Wm. Woodburn Potter, Real Estate Trust Building, Philadelphia. Owner, Dr. Chas. B. Worden, on premises. Brick, third story rear addition, 12x14 feet, slag roof, pine floors, electric lighting, mill work, plastering and plumbing. Architect has received revised bids.

Machine Shop (add.), Midvale, Philadelphia. Architect, private plans. Owners, Midvale Steel Co., Widener Building, Philadelphia. Steel and brick, 2 stories, 112x209 feet, slate roof, concrete and pine floors, steam and hot air heating (lighting and steel work reserved), hollow metal sash and skylights, fire doors, iron stairs, ornamental iron work. Owners taking bids, due as soon as possible. Warren Moore & Co., Colonial Trust Building; John R. Wiggins & Co., Otis Building; Irwin & Leighton, 126 North Twelfth street; F. W. Mark Cont. Co., Finance Building; Roydhouse-Arey Co., 112 North Broad street; Barclay White & Co., 1713 Sansom street; Interstate Eng. and Const. Co., Coleman Building; Metzger & Fisher, Otis Building, Philadelphia; George C. Dietrich, Riverside, N. J., and Levering & Garrigues, 552 West Twenty-third street, New York City, are figuring.

Storehouse (add.), Philadelphia Dept., Peltz street and Schuylkill avenue. Architect, private plans. Owners, U. S. Government, Schuylkill Arsenal, Peltz street and Schuylkill avenue, Philadelphia. Brick and stone (elevator shaft addition), 5 stories, 15x15 feet, cement floors, hollow metal skylights, 2 elevators. Low bidders: Charles Gilpin, Harrison Building, \$14,998; M. W. Anstie, 1218 Filbert street, \$17,900.

Store (int. alt.), Broad and Columbia avenue, \$4,000. Architect, Le Roy B. Rothschild, Bulletin Building, Philadelphia. Owners, Talking Machine Co., 143 South Broad street, Philadelphia. Consists of interior alterations, cabinet work, painting, electric lighting, glass. Plans in progress. Architect ready for bids in a week.

Residences (14), Rittenhouse and Price streets, Germantown. Architect, Wm. J. Cowen, 943 East Cheltenham avenue. Owner, John F. Conlin, 5340 Germantown avenue. Brick, 2 stories, 16x40 feet, slag roof, hardwood floors, hot water heating, electric lighting. Owner taking sub-bids, due August 22nd.

Factory, Greenwich Point, Philadelphia. Architect, private plans. Owners, the Brown Co., Inc., 2063 East Fifth street, Philadelphia. Reinforced concrete and brick, 3 stories, 120x61 feet, Barrett roof, concrete floors, rolled steel sash and skylights, fire escapes, ornamental iron work (heating, lighting and elevator reserved). Owners have received bids.

Warehouse, 117-19 North Tenth street, Philadelphia. Architects, Peuckert & Wunder, 310 Chestnut street. Owners, Snyder & Co., 134 North Tenth street, Philadelphia. Brick, steel and concrete, terra cotta and stone trim, 5 stories and basement, 104x31 feet, slag roof, pine and oak floors, electric lighting, tile work, hollow metal sash and skylights, fire doors, metal bulks, ornamental iron work (heating and elevator reserved). Architects have received bids.

Paving, etc., Francis and Shirley streets and **Baseball Backstop**, Twenty-sixth and Morris streets. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Board of Recreation, Room 587, City Hall. Cement sidewalks, armored concrete curbing and sodding and construction of baseball backstop. Low bidders on paving, Robbins Contr. Co., Lafayette Building, \$6,927; Carter Paving Co., 641 N. Eighteenth street, \$7,186. Low bidders on backstop, Wayne Iron Works, Commercial Trust Building, \$1,450.

Stores and Apartments, southeast corner of Fifty-sixth and Cedar avenue, Philadelphia. Architect, H. E. De Hoff, 48 South Sixty-first street, Philadelphia. Owner, John Baker, on premises. Brick, 2 stories, 22x80 feet, slag roof, steam heating, electric lighting, tile and marble work, metal ceilings and metal bulks. Revised plans completed. Owner is ready for sub-bids.

Paving and Painting, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Public Health and Charities, Wilmer Krusen, Director, Room 584, City Hall, Philadelphia. Paving and repaving of footway alleys (\$7,000), painting exterior of buildings at Philadelphia Hospital, Second and Luzerne streets, Philadelphia. Owners ready for bids, due at noon, August 28th.

Warehouse (add.), Broad and Washington avenue, Philadelphia. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Reinforced concrete and brick, 7 stories, 92x113 feet, slag roof, concrete floors, hollow tile, rolled steel sash, safety treads, fire doors, waterproofing, dampproofing (heating, electric work and ele-

vators reserved). Owners ready for bids, due September 4th.

Filter House (alt. and add.), Girard College, Philadelphia. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Girard College, Corinthian and Girard avenues, Philadelphia. Iron, concrete and copper, 1 story, 10x14 feet, slag roof, waterproofing, ornamental iron work, wire work. H. H. Burrell, 206 South Quince street, is taking sub-bids.

Garage, 6328 Vine street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, F. Di Bernardino, on premises. Brick and stone, 1 story, 16x24 feet, slag roof, cement floors, hot water heating, electric lighting. Plans about completed. Owner will be ready for bids in a few days.

Sales and Service Building, 1821 Chestnut street, Philadelphia. Architect, Edw. B. Delk, 34 South Seventeenth street, Philadelphia. Owner's name withheld. Brick (slow burning), terra cotta front, 2 stories and basement, 20x160 feet, slag roof, cement and wood floors, steam heating, electric lighting, tile and marble work. Plans in progress.

Storage House, Paul street, Frankford, Philadelphia. Architects, Stearns, Woodnutt & Schmohl, Stephen Girard Building, Philadelphia. Owners, Keystone Emory Mills, 4325 Paul street, Frankford. Brick and steel, terra cotta trim, 2 stories, 100x36 feet, slag roof, cement and maple floors, rolled steel sash, hollow metal skylights, fire doors (plumbing, heating, electric work, sprinklers, paving, fencing, wire window guards and elevator reserved). Architects have received revised bids.

Garage and Machine Shop, southwest corner of Woodland avenue and Yewdell street. Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owner, Isaac Dozor, 5632 Walnut street, Philadelphia. Brick, 1 and 2 stories, 89x92 feet, slag roof, cement and pine floors, steam heating, hollow metal skylights, 1 elevator, gasoline storage system. Plans in progress.

Store and Apartments (alt. and add.), Broad and Allegheny avenue. Architect, Mahlon H. Dickinson, Bellevue Court Building, Philadelphia. Owners, Crumbie Bros., on premises. Brick, steel and terra cotta, 3 stories, 40x65 feet, slag roof, steam heating, electric lighting, tile and marble work, metal lath, waterproofing (painting, glazing, gas and electric fixtures, refrigerators, kitchen cabinets, gas ranges and hot water heater. New plans in progress.

Nurses' Home (add.), Fifteenth street, above Race street. Architect, private plans. Owners, Hahnemann Hospital, on premises. Brick and reinforced concrete, fireproof, 6 stories and basement, 38x21 feet, slag roof, steam heating, electric lighting, tile and marble work, hollow metal sash, cement and pine floors, metal lath, metal weather strips, damp-
